COMPANY PROFILE

RMO HISTORY

companyprofile

Introduction

Since the 1930's, Rocky Mountain Orthodontics (RMO®), has made dramatic advances in the science of orthodontics, establishing itself as one of the leaders in a rapidly evolving field; a field that dramatically improves people's lives. Since its formal incorporation, RMO® has been known as a company of energy and ideas - traits that remain at the core of the company's philosophy today.

RMO® is much more than a business and model of excellence among Colorado corporations. The company is the oldest privately held orthodontic firm in the United States, and is a Denver institution whose company history is tightly linked with the history of Denver and orthodontics itself.

In the Beginning

Before the advent of stainless steel, and prior to the founding of RMO®, orthodontists had to be skilled craftsman as well as doctors. In fact, much of their time was spent devising, constructing, and maintaining their own oral appliances. Because those appliances were typically fabricated from gold alloy, which tended to loosen in a short period of time, a large part of an orthodontist's work was dedicated to repairing and adjusting the appliances after they had been put into use. The orthodontist's job demanded mechanical skill, diligence, and even artistry. And yes, for all of the effort involved, the occupation was often less than rewarding. Even the best orthodontic appliances of the day were woefully limited in their effectiveness.

All of that changed with the development of versatile stainless steel alloys coupled with the ingenuity and foresight of RMO®'s founder, Dr. Archie Brusse, a pioneer Denver orthodontist. With a small but capable staff, and with help from an executive at the American Steel and Wire Company, RMO® set about developing the first set of prefabricated orthodontic appliance system options; using stainless steel as the major component versus gold. After much clinical research and experimentation, the first system of appliances was unveiled in 1933 at the annual meeting of the American Association of Orthodontists, in Oklahoma City, OK. Reception was limited, and most recognized leaders of that time felt the appliances would not work.

In time, the impact of these prefabricated devices on the world of orthodontics was dramatic. Simply put, they changed the face of dentistry. The wide variety of appliance shapes and sizes supplied by RMO® enabled orthodontists to treat a diverse array of patients more effectively.

RMO® can be proud of the loyalty and the efforts of the employees and the local commercial suppliers who have helped it succeed and advance during the company's history. RMO® is, by all measures, an international standard, poised to build upon its legacy of excellence for decades to come. Dr. Archie Brusse was an early adherent to the synergistic approach to orthodontic appliances and treatment options.

Dr. Archie Brusse

In 1949 Archie's son, Martin, officially joined RMO. Archie expected him to learn about the family business as well as the complexities of the orthodontic industry.

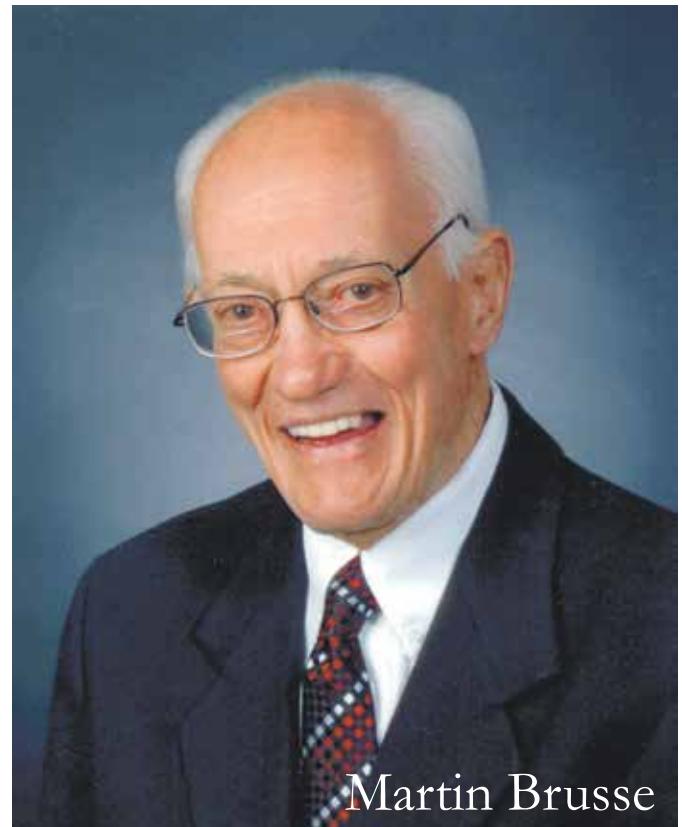

Martin had received the Bronze Star Metal as a member of the 10th Mountain Division in World War II. After the war, he attended Dartmouth University where he received his degree.

In his early years at RMO, Martin was influenced by his Uncle Walt, and other colleagues including: Jack Meehan, Bay Brunson, Sam Bulkley and Martin Hamilton.

With continued mentoring and encouragement from Uncle Walt, Martin joined him along with Dr. Brusse and RMO as the company entered the prosperity of the post-war boom. The decades that followed were host to RMO innovation and orthodontic breakthroughs that resulted in a significant global presence within and increasingly competitive industry. The legacy Dr. Archie Brusse handed down to Martin celebrated seventy-six years in business as a private company with strong performance at the time of Martin's passing.

Under Martin's leadership, RMO developed over 60 international dealerships around the world and has been awarded twice with the President's distinguished "E-Star Award for Exports" by the U.S. Secretary of Commerce For continued outstanding contributors to the Export Expansion Program of the United States of America.

Martin earned many good friends and business associates around the world, but he did not have offspring to mentor as his father before him.

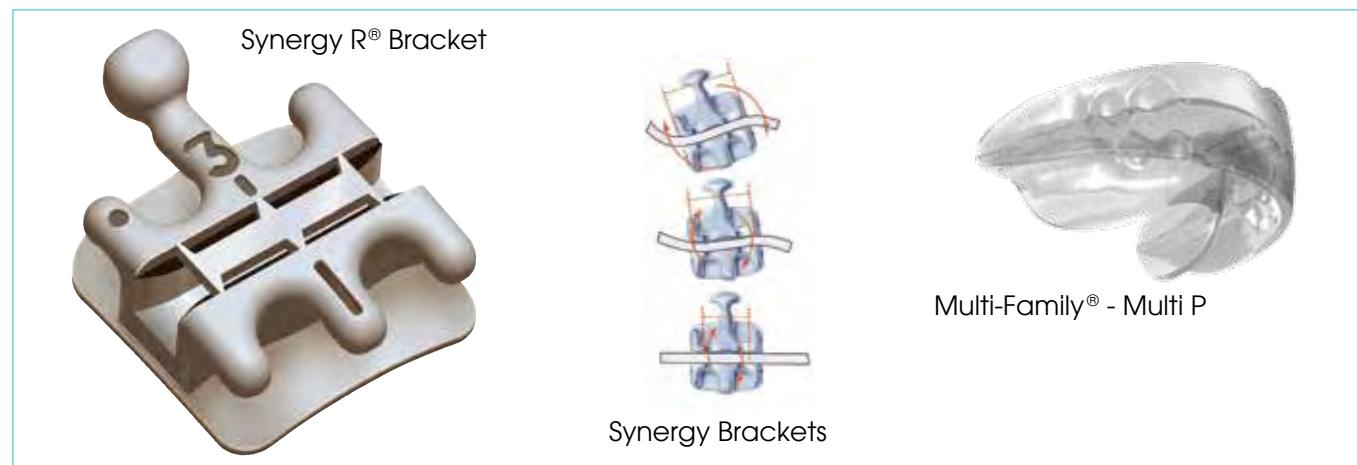

Martin Brusse

Over the years he quietly searched for the exceptional individual(s) he would someday entrust with the continuing the family legacy. Martin realized his goals in two very special and capable people he confidently selected to continue guiding RMO into the future: Tony Zakhem, CEO & Chairman and Jody Hardy, President.

Tony Zakhem, CEO & Chairman and
Jody Hardy, President

companyprofile

The Products

RMO® has always enjoyed being an innovator and visionary in the orthodontic market, pushing the practice of orthodontics to new frontiers while consistently providing a benchmark of quality for other companies to follow. One example of RMO®'s visionary concepts begin over 60 years ago when RMO® introduced the "Snap Channel" bracket.

Self-ligating may seem like a recent technology when in fact RMO® introduced this idea over 60 years ago.

Synergy R® represents a modern day "Snap Channel" Bracket created using sophisticated software programming tools, MIM technology, and precise engineering. This is only one example of how RMO® has been consistently maximizing available technology and developing quality products for doctors and patients.

Currently RMO® serves all aspects of orthodontics. RMO® recognizes that all patients differ and that all orthodontists vary in education, experience, treatment approach, appliance performance, and final detailing. Since the needs of every doctor vary, RMO® is committed to developing practical Synergistic solutions.

Synergy develops when two or more interactive parts of a system produce an effect in which the power of the interactions of the whole become far greater than the sum of the parts. RMO®'s attention to synergies provides practices with a wide selection of dependable treatment options.

RMO® serves three broad categories of orthodontics:

Category 1- Diagnostics

Increasingly RMO® has emphasized the development of computer -aided diagnostic and treatment planning tools.

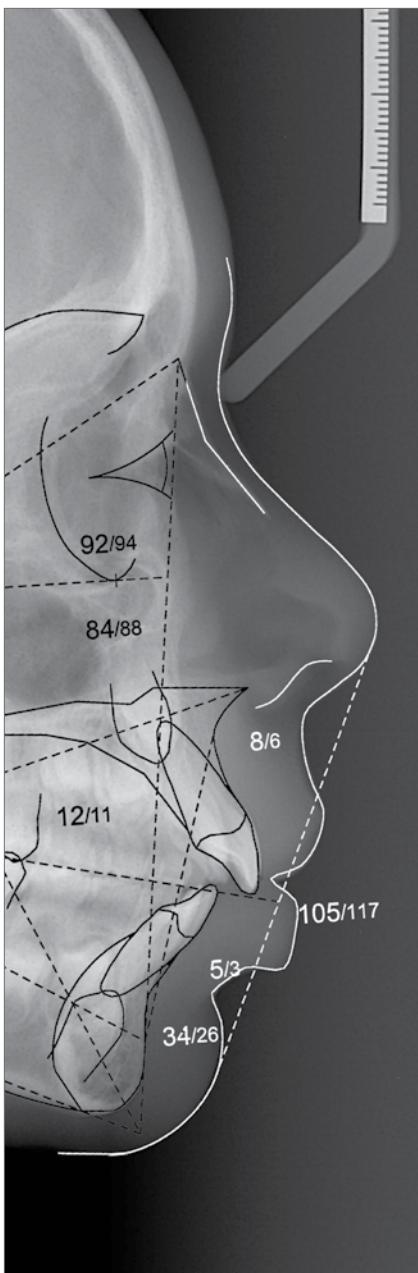

These information innovations have provided powerful analytic information that has helped doctors and their staff effectively treat each patient's individual growth and development. This results in improved outcomes, more predictable results, and less failure for patients.

Since 1969, RMO Data Services® (RMODS) has engaged in an ongoing program of progress through continuous research.

RMODS® is based upon case and research information derived from a worldwide orthodontic network consisting of practicing orthodontists, universities, and researchers. The information contains the latest scientific findings in the field of orthodontics. This information is used along with the doctors' personal treatment philosophy to form a complete detailed analysis of each patient prior and during treatment.

RMODS® has several new methods for sending and receiving diagnostic services:

- allows the doctor to transmit their patients' records digitally and the complete diagnostic work-up sent electronically back to the doctor.

- web allows the doctor to complete the tracing in his / her office and electronically submit the tracing to RMODS® for the final analysis.

Category 2- 1st Phase Orthodontic Treatment / Functional Education

RMO® has been actively involved in early treatment form the beginning, introducing devices such as: stainless steel crowns, Class II correction appliances, and the Nuk Orthodontic Pacifier. A close partnership was developed when CEO Martin Busse collaborated with Dr. Ricketts on his vision for the Bioprogressive philosophy in 1957, after the European Orthodontic Society (EOS) in Copenhagen, Denmark.

RMO® continues its commitment to 1st phase approaches, believing the majority of people favor early interception over more complex measures in later years. Over the years RMO® has introduced many 1st phase appliances including:

- Wilson appliances – The Wilson® 3D® system comprises a series of interrelated fixed/removable intraoral modules that simplify and improve treatment. Wilson® 3D® appliances can be used to supplement all techniques while delivering practical and simple solutions to both typical and extraordinary movement challenges. RMO® sponsors numerous CE events that teach the skills needed to incorporate Wilson® 3D® concepts and materials into your present technique.

2. The Multi-Family™ System Appliances are myofunctional appliances that can be incorporated into your practice during all phases of orthodontic treatment. They are Functional Education™ Appliances used as early as 5 years old to reduce muscular forces in the mouth and promote proper alignment of the teeth; or as late as 13 years old, during fixed appliance treatment, to facilitate mandibular positioning. The Multi-Family™ System is versatile and functional for both doctors and patients.

Category 3- Fixed Appliances

Since the beginning, RMO® has designed innovative fixed appliance options for orthodontists. From creating of the first preformed band to pioneering and implementing Metal Injection Molding (MIM)

Technology for orthodontic use. RMO® has continued its drive for new technologies and new methods of manufacturing consistent, high quality Fixed Appliances. Today RMO® carries many different patented fixed appliance designs to capture all of the varying orthodontic treatment modalities from Brioprogressive to Straight Wire concepts and everything in-between.

RMO Europe

and a road map to its future

The year was 1962. Martin Hamilton, who began his career at Rocky Mountain in 1954, was regional manager of the company's activities in the Eastern United States. Recognizing the tremendous potential of a new emerging market, our president Martin Brusse asked Marty to establish a permanent European presence for Rocky Mountain Orthodontics to be headquartered in Paris.

At the outset Rocky Mountain products were distributed through Pyramid S.A., a prominent dental supply company headquartered in the French capital. After several years, it was decided that Rocky Mountain's ambitions in France and Europe would be best served within the framework of a subsidiary company. In 1967 Rocky Mountain France was established and took up residence at Rue Singer, 16^e, Paris.

Martin worked tirelessly to promote Rocky Mountain Orthodontics. Not least of Martin's many achievements was the introduction of the Bioprogressive (Ricketts) philosophy and related appliance systems into the European market. Numerous courses, seminars and study clubs were organized with Dr. Carl Gugino. For more than three decades events sponsored by Rocky Mountain and featuring Carl were among the most popular on the continent. It is a tribute to Martin and Dr. Gugino that the Bioprogressive philosophy continues to enjoy a wide following today in throughout Europe.

In addition to his outstanding efforts in France, Martin, with the assistance of his wife Natalie, traveled extensively abroad promoting Rocky Mountain products and services. Martin, Natalie and a Rocky Mountain exhibit became fixtures at every important orthodontic congress. During this period exclusive distribution agreements were awarded to numerous orthodontic specialty companies throughout Europe and subsidiaries were established in Germany (1970) and Italy (1976). Today Rocky Mountain is represented by an independent dealer network spanning twenty-seven countries serviced directly from RMO Europe headquarters in Illkirch.

Martin Hamilton managed Rocky Mountain France until his untimely passing in 1990. Twenty years on Marty continues to be remembered fondly as a teacher, a visionary and an exceptional leader by all those who had the good fortune to know him.

In 1990, the elimination of border controls, the free movement of goods and people and a single currency within European Economic Community were on the horizon. Dan Van Straten, Vice President, Global Development, was charged with developing a strategy for reorganizing RMO France to better serve a quickly expanding market. In December 1990, and after considering several options, the decision was taken to re-locate the company in Illkirch, a suburb of the city of Strasbourg in the Alsace region of France. The community offers a skilled and multi-lingual labour pool, close proximity to important major markets and a scientific park setting close to the city center.

It was at this time that Rocky Mountain France was renamed RMO Europe to better reflect the international scope of its business.

A new building needed to be conceptualized, an architect and general contractor commissioned, permits acquired, furnishings and office equipment purchased and new employees hired and trained. A target date for the transfer of the company's activity of January 1, 1992 presented Dan with a daunting logistical challenge.

Above: Martin Hamilton
Below: Dan Van Straten

Ground breaking for the new building finally took place August 2, 1991. December 28 the Paris office ceased activity and the inventory was transported 450 kilometers to the completed facility in Illkirch. As planned the company resumed regular business from its new location January 2, 1992.

In 1991 Lyn Turner was appointed general manager of RMO Europe. Lyn, who joined RMO in 1966, was president of Rocky Mountain Orthodontics (Canada) Ltd. prior to his European appointment.

In 1992 RMO Europe implemented a new custom EDP program. With the assistance of RMO Denver, a full service preweld department was set up and operators were trained. In September RMO Europe began servicing German retail accounts and European dealers on a direct basis. In 1996 the company developed its Quality Management System (ISO 9002) and acquired the Medical Device Directive (EN46002) and CE certifications necessary to satisfy the European Community regulatory requirements.

At the annual shareholder meeting in May 2010, on the eve of Lyn Turner's retirement, Marc Mayer was appointed President of RMO Europe SAS. Marc joined Rocky Mountain France in 1988 and has since been involved in all aspects of the company's operations. His hard work, loyalty and dedication have been fundamental to the success of RMO Europe and Marc is well equipped to continue the proud and independent tradition of RMO in the years ahead.

internationaldealers

RMO® International

In 1933, RMO® was founded in Denver, Colorado and by the late 1930's the first export orders were leaving the factory. This early awareness of the importance of international markets helped to shape the global vision of the company that continues today.

By the 1960's, RMO® had established a wholly owned subsidiary in France (RMO® France). This was followed very shortly thereafter by additional subsidiaries in Germany (RMO® Germany), Italy (RMO® Italy), Australia (RMO® Australia) and a joint venture company in Japan (RMMC – Rocky Mountain Morita Corporation).

Concurrently, independent dealers were being established in Asia, the Pacific Rim, Latin America, Europe, Scandinavia, the Middle East and Africa. Martin Brusse, Martin Hamilton, Sam Bulkley and Frank Scanlon were key members of the RMO® team which initially developed the sales and marketing channels in these important markets.

Early on RMO® understood that its success in these countries depended on more than just selling top quality products at a fair price. There was also a need for education and the sharing of ideas related to orthodontic philosophies, new products and materials, and clinical applications. Many doctors from around the world attended courses given by the likes of Dr. Robert Ricketts,

Dr. Carl Gugino, Dr. William Wilson and many others.

RMO®'s health care innovations have not gone unnoticed. RMO® was awarded the prestigious *E Award for Excellence in Educational Marketing* by two US Presidents, and the company has received the *Colorado Governor's Award* twice in its history for Consistent Excellence in Exporting. These honors reflect RMO®'s status as a truly international company.

With over 50% of corporate sales being generated by business outside of North America, RMO® would like to give special thanks to our world-wide network of dealers. They are a key reason for our continued success.

Sam Bulkley - Demonstrating RMO Products - 1980

Dr. William Wilson and Martin Brusse, President of RMO, at a Seminar - 1980

rockymountainmorita

RMO®

has been involved in the Japanese orthodontic market since the early 1960's. In 1963 the J. Morita Corporation, the leading dental equipment manufacturer in Japan, started distributing RMO® products to the orthodontic market. In 1970 Sam Bulkley from RMO® and Michio Yamashita visited dental schools at Japanese universities throughout the country. They did product demonstrations which were enthusiastically received. Of particular interest at that time was the RMO® Spotwelder – an innovative product which helped improve clinical efficiency tremendously.

In 1973 Martin Brusse, President of RMO®, and Fukuo Morita, President of the J. Morita Corporation, formed their joint venture company called RMMC – Rocky Mountain Morita Corporation. After 37 years in business, this company continues as one of the leaders in providing orthodontic products and services to the Japanese market.

In the mid 1970s RMMC organized Advanced Orthodontic Courses with Dr. Robert Rickets. This created a lot of interest in the Biopressive Technique. Dr. Carl Gugino also started giving courses organized by RMMC. Continuing Education became an important component of RMMC's success.

Over the years, RMMC has introduced many new products into the Japanese market. These include Orthomite – Superbond, Energy Chain™ (F.M. Ringlets), Synergy® Brackets (a low friction, light force fixed appliance system) and the Grace Bracket and Tube System (developed by Dr. Hiroshi Nezu and Dr. Kenji Nagata).

Since the founding of the joint venture company, RMO® and RMMC continue to work together and to share ideas. Each year representatives from both companies jointly attend the AAO (American Association of Orthodontics) and JOS (Japanese Orthodontic Society) Conventions.

RMO® is proud of what RMMC has accomplished, and looks forward to many more years of working together.

Martin & B.A. Brusse visited the J. Morita Manufacturing Corporation in 1970 for the JOS (Japanese Orthodontic Society) Convention.

History

1963

J. Morita Corporation started to distribute RMO® products in the Japanese market.

1970

Sam Bulkley from RMO® and Michio Yamashita visited Japanese universities to promote RMO® products. The demonstration of RMO® spot welders was enthusiastically received.

1977

RMMC started organizing Advanced Orthodontic Courses with Dr. Robert Ricketts in Tokyo.

1982

Released Orthomite Superbond for Direct Bonding into the Japanese market (first use of methyl methacrylate in Orthodontics).

1983

Released "Energy Chain™", also called F.M. Ringlets, into the Japanese market.

1989

Released an aesthetic bracket made from zirconia, Hi-Brace for the first time in the market.

1993

Released Synergy® Brackets, which combined low friction and low forces to improve treatment efficiencies.

1996

Introduced the Grace Bracket and Tube System (developed by Dr. Hiroshi Nezu and Dr. Kenji Nagata).

Haruo Morita was named President of the J. Morita Corporation. As part of his vision to position the joint venture as a leading company for many years to come, he appointed Yuh Yamazaki as President of RMMC.

Together they have implemented strategic changes to improve customer service, sales and administration. They work closely with Tony Zakhem, CEO of RMO, and Jody Hardy, President of RMO, during yearly meetings to make sure that their shared visions are integrated into the management of the business.

Bioprogressive Philosophy
 3D® 1st Phase FIXED/REMOVABLE® Wilson®
 SWLF®- Straight Wire Low Friction
 Synergy®
 FLI® Orthodontic Systems

systems

Since its inception, RMO® has believed in the value and synergistic benefits of developing systems. By looking at the whole picture, both doctors and patients can take advantage of a wide range of options.

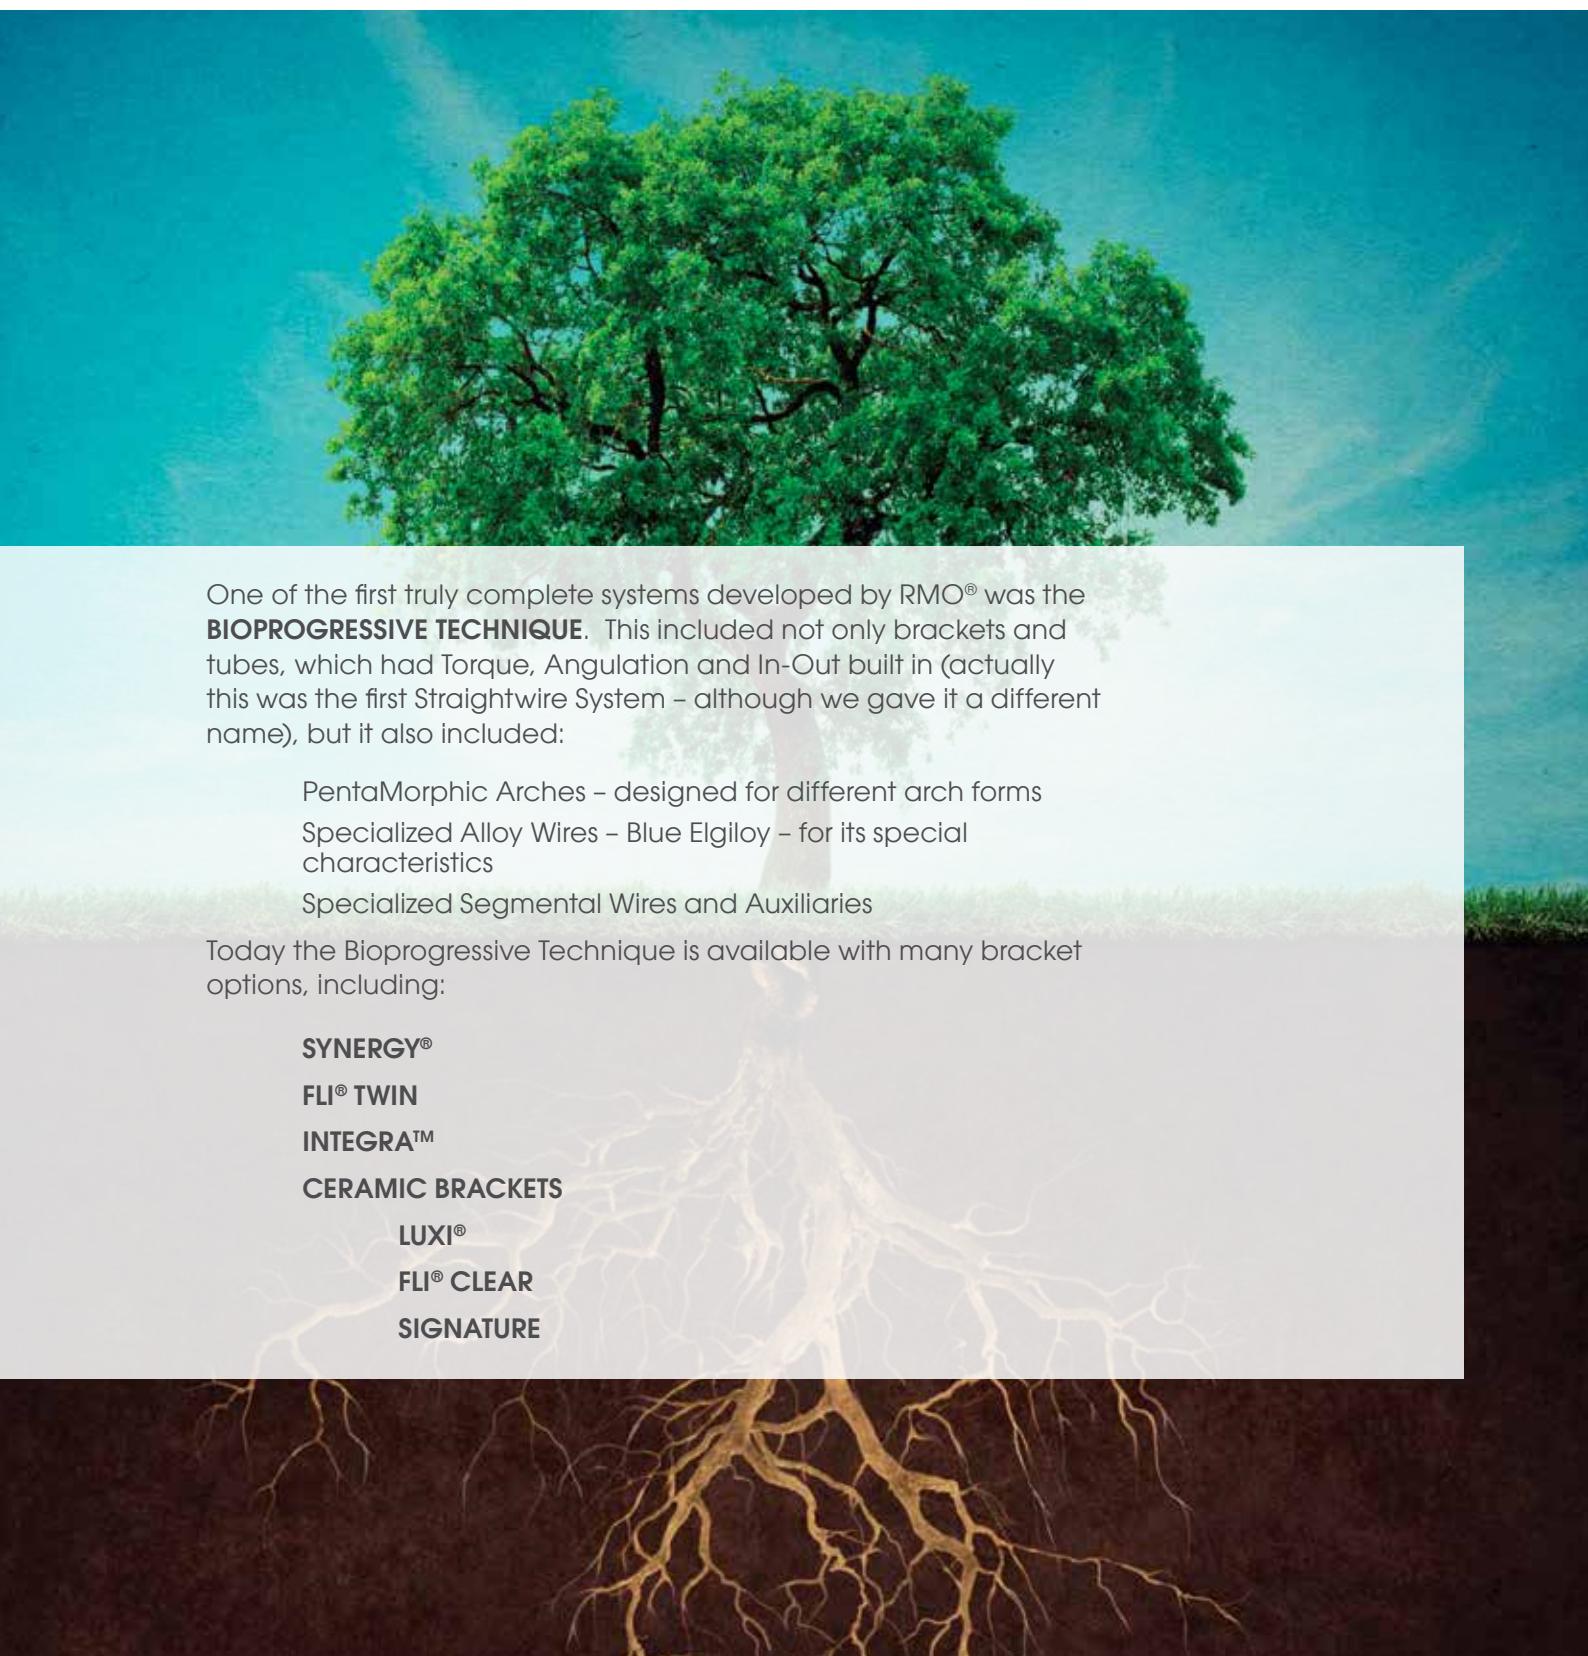

systems

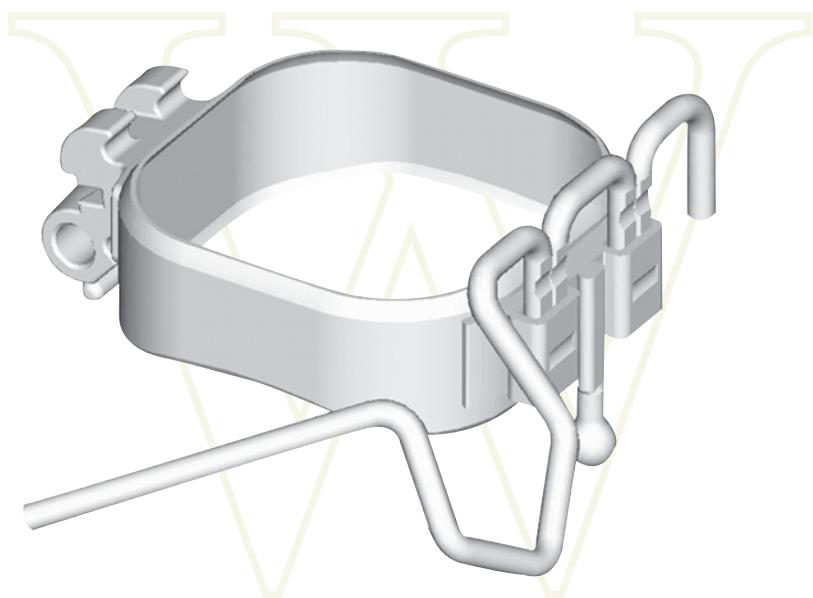

BIOPROGRESSIVE TECHNIQUE

systems

3D® 1ST PHASE FIXED/REMOVABLE® (WILSON®)

WILSON® 3D®

The **WILSON® 3D® FIXED/REMOVABLE® SYSTEM** is an example of another early offering from RMO®. It is often thought of as a "Tool Kit" for addressing first phase/early treatment clinical situations. The various appliances share simple design features for expansion, uprighting, tipping, torquing and space maintenance. They also offer easy chair side adaptations for each individual patient. RMO continues to improve and add to the "Tool Kit." One recent addition is the 3D Distalizing Arch to be used with the Dual Top TADs.

SYSTEMS

systems

SWLF®- STRAIGHT WIRE LOW FRICTION

SWLF® - STRAIGHT WIRE LOW FRICTION – This technique, developed by Dr. David Suarez, is a state of the art system which takes into account new developments in bracket designs, manufacturing technologies and advanced wire offerings. It provides an easy to understand approach to using all the technology available to treat patients quickly, more efficiently and more comfortably. Notable components are Synergy Brackets, Thermal Activated Nickel Titanium Wires and Titanium Molybdenum Wires.

SWLF
STRAIGHT WIRE | LOW FRICTION

SYN E R G Y®

SYN E R G Y® – these brackets are synonymous with RMO® and the many advantages that can be incorporated into a system. Their unique design allows for reduced friction, multiple ligating options (which can be used on a tooth by tooth basis), and more options for using different wires very early in the treatment cycle. All of this results in shorter treatment times for the patient, while providing excellent finished results. Options include:

SYN E R G Y®
SYN E R G Y R®
SYN E R G Y F X®
SYN E R G Y L U X® (CERAMIC)

Synergy (sin-er-jee) : is the combination...

...of two or more things that creates an effect...

...which is greater than the sum of the individual parts.

systems
SYN E R G Y®

BE A HERO...

with FLI Orthodontic Systems

FLI ORTHODONTIC SYSTEM – This is one of the newest RMO system offerings. It includes new designs of brackets and tubes that incorporate physical features that improve treatment efficiency. RMO also added aesthetic wires and improved bonding adhesives. Components include:

- FLI® SL
- FLI® CSL
- FLI® TWIN BRACKETS
- FLI® CLEAR – CERAMIC BRACKETS
- FLI® COMPOSITE
- FLI® TUBES
- FLI® MINI TUBES
- FLI® WIRES

FLI® SL- Self Ligating

RMO®'s New FLI® SL Brackets bring innovative design to low-friction, passive self-ligation technology

FLI® CSL- Ceramic Self Ligating

RMO®'s New FLI® CSL Brackets has all the benefits of the FLI SL, but now available in ceramic.

FLI® TWIN- Now in Roth prescription

Smooth, comfortable low-profile design. Liberal tie-wing clearance for easy and secure ligation.

FLI® CLEAR

Fully transparent for unmatched aesthetics without glare or reflections; smooth rounded surface is fully polished for exceptional patient comfort

FLI® COMPOSITE

Exceptional patient comfort, Easy, more secure ligation. Unmatched aesthetics and true natural appearance.

FLI® TUBES

FLI® Series Buccal Tubes deliver superior performance in an extremely small package. With Metal-Injection-Molded (MIM) construction for smooth comfortable contours.

FLI® MINI 2ND MOLAR TUBES

RMO®'s New FLI® Mini Tubes are specifically designed for partially erupted 2nd molars, offering a perfect solution for early stages of bonding.

FLI® WIRE

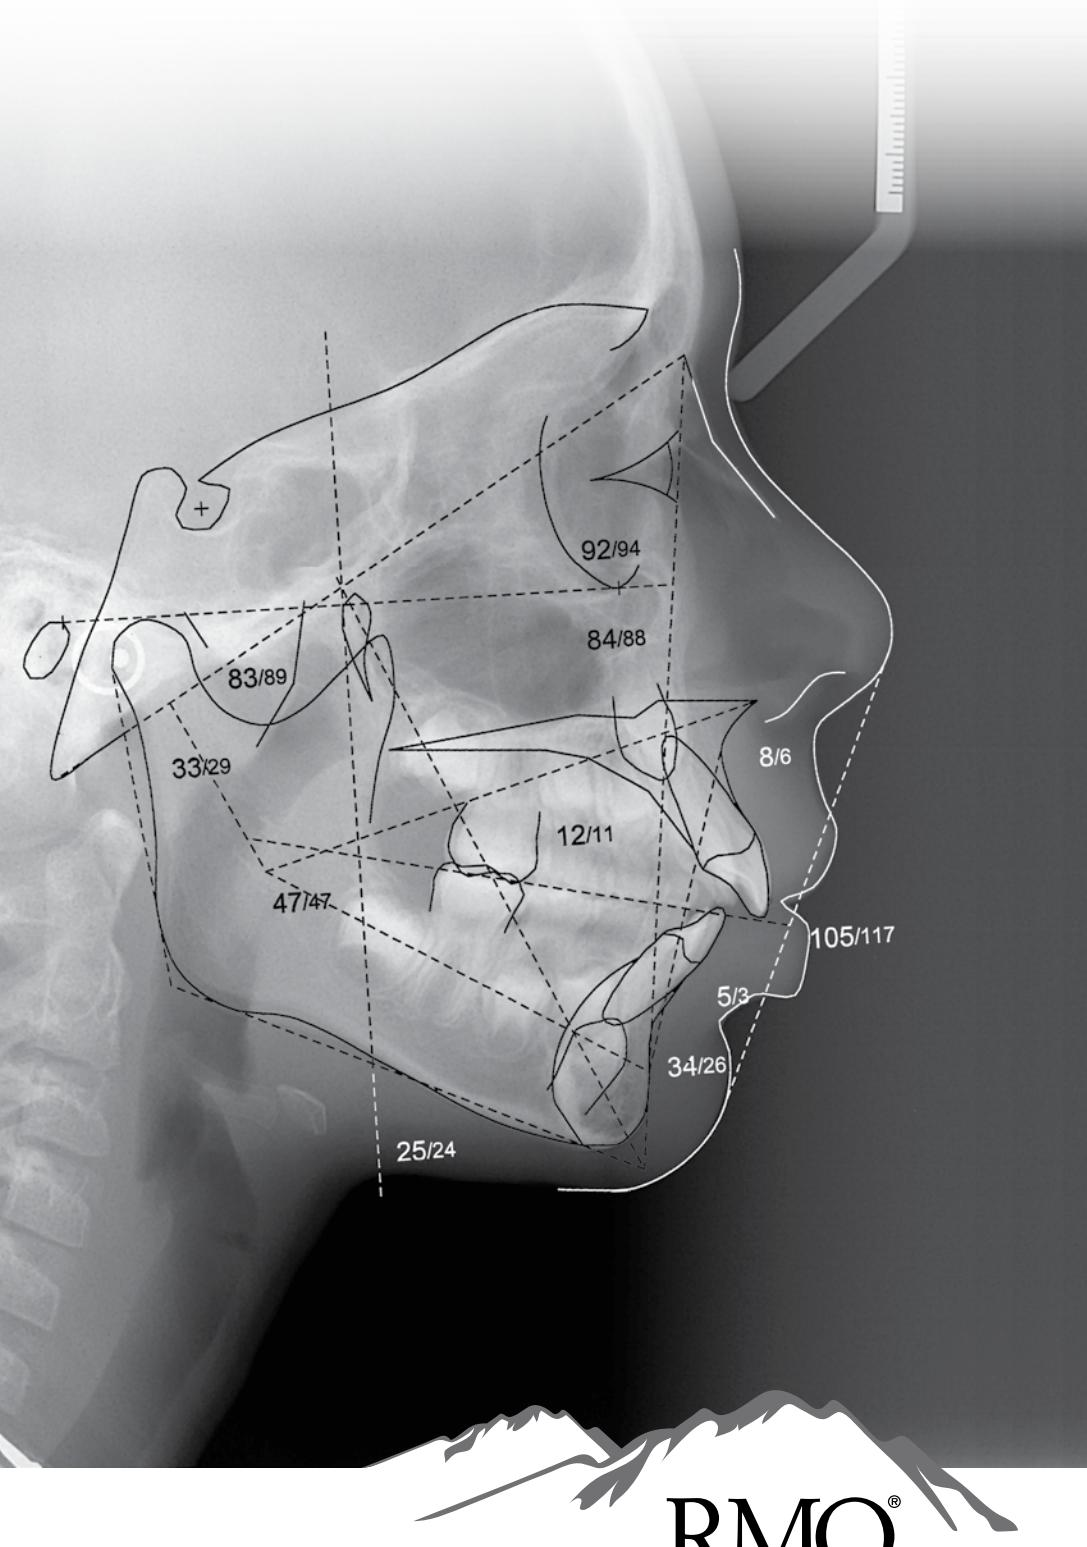

FLI® wire coated archwire system offered in both RMO® Tru-Chrome® stainless steel, and Orthonal® superelastic nickel-titanium.

DATA SERVICES

tableofcontents

E-Ceph®
Joe-Ceph®

RMO®
rocky mountain orthodontics

Computerized **DATA** services (RMODS®)

Rocky Mountain Orthodontics Data Services® (RMODS®) is the world leader in providing computerized orthodontic diagnosis. We have analyzed over 700,000 cases. RMODS has helped thousands of clinicians determine the best treatment plan possible, based on the complexities of each individual patient.

Key components of the service:

- Comprehensive cephalometric analysis (frontal and lateral)
- Individualized norms based on age, gender and race
- Tracing of lateral and frontal x-rays
- Arch analysis of upper and lower dentition
- Airway analysis
- Visual Treatment Objective (VTO) (short and long term)
- Treatment design
- 3rd molar probability
- Treatment sequences worksheet
- Height prediction
- Long range growth simulation to maturity with and without treatment
- Alerts including TMJ awareness, excessive mandibular growth, and endocrinological problems
- 33 different letters are generated for extreme or unusual situations

RMO's E-Cephalometrics®, or E-CEPH® (computer-aided orthodontic data service via the internet) is the most cost effective, complete, and accurate orthodontic diagnostic service in the world.

- E-Ceph is like having an in-office diagnostic system and the best trained staff without the overhead
- Surgical treatment design is available
- Free telephone and online support
- View sample cases at www.rmortho.com or call 800.458.8884 for more info

There are two easy ways to access this service:

E-Ceph® online service

- Practice transmits digital/scanned records via the internet
- RMODS processes records according to the doctor's individualized treatment standards
- Records can be shared with other dental/health professionals electronically
- RMODS transmits diagnostic work-up back to doctor via the internet
- Records can be stored, archived electronically, and printed
- Records can be viewed on screen or printed for patient/parent consultation
- Records can be shared with insurance companies electronically for faster reimbursement

Mail-in and mail-back service

- Doctor sends records by mail/FedEx
- RMODS processes records according to the doctor's individualized treatment standards
- Records can be shared with other dental/health professionals by mail or in person
- RMODS sends diagnostic work-up back to doctor by return mail/FedEx
- Records can be mailed to insurance companies

Comprehensive Cephalometric Description

- This report is generated for lateral and frontal x-rays
- Over 100 measured factors are evaluated and printed with norms and clinical deviation based on patient's age, sex, and race
- Orthodontic-dental-skeletal relationship is reported, including soft tissue and airway analysis

Tracing Sheet

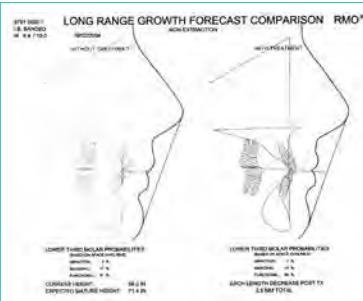

- Lateral and frontal tracing
- The most popular analyses (Ricketts®, Jarabak, Steiner, Sassouni, Downs and Grummons)
- Significant considerations, which is a summary of the patient problem based on over 200 digitized anatomical points

Visual Norms

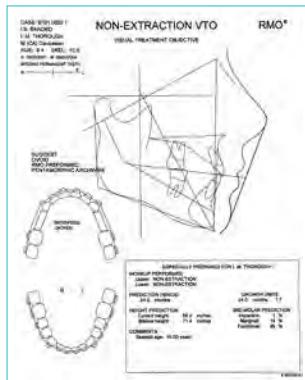

- Visual norm is an individualized computer composite of a normal population selected by age, gender, and race, adjusted for size
- Visual norm enables the practice to visualize a patient's abnormalities by superimposing an image on the tracing

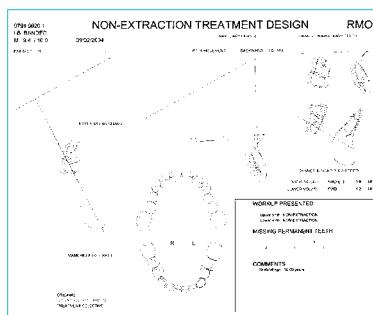

Growth Forecast to Maturity

- Growth forecast to maturity with and without treatment are displayed
- Expected profile, skeletal development, and dentition are evaluated
- 3rd molar space analysis and expected space available
- Patient height to maturity is estimated
- This display is the most effective communicator for patient presentation, and answers the following questions:
 1. What happens if I am not treated?
 2. What if I am treated?
 3. Will I outgrow the problem?
- Emphasizes long term treatment plan instead of two year short term plan

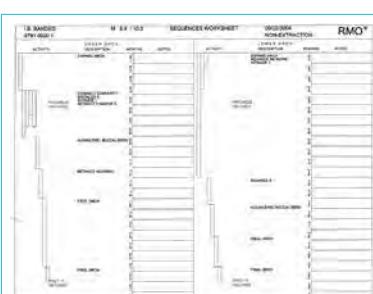

Visual Treatment Objective (VTO)

- An individualized post-treatment goal
- Takes into account the existing skeletal morphology, limitation of skeletal change, expected growth, occlusal function, aesthetics, arch form, crowding, doctor's treatment philosophy and mechanics, extraction or none, and treatment stability

Treatment Design

- Shows the tooth and skeletal changes required to achieve the Visual Treatment Objective

Sequence Worksheet

- This is a tool to aid the practice in developing a written treatment plan
- It is combined with documentation allows the practice to track how treatment is progressing at any time

Packages

- PD Primary Dentition Diagnostic Package
 D1 Comprehensive Package
 F1 Functional Application Package
 SP Surgery Package
 VP Visual Package (frontal at extra charge)
 27 Predetermined Arch Length Package
 31 Progress Tracing and CCD
 32 End of Tx Tracing and CCD
 33 Retention Tracing and CCD
 34 Post Retention Tracing and CCD

(no arch required)
 Lateral x-ray and lower arch impression required
 There is no additional charge for submitting a frontal x-ray
 Facial photos are optional. A pan-oral x-ray helps us better analyze a case
 Wrist film and upper arch impression are encouraged
 Lateral x-ray is required with ALD and leeway space

Lateral x-ray is required
 The case has been previously processed by RMO

Referral packages

- 64 Patient/Parent
 65 Interprofessional
 66 ENT

dataservices

JOE CEPH®

JOE CEPH®

JOE Ceph®

JOE Ceph is an in-office on screen digitizing software for performing static analysis of lateral, frontal x-rays and dental arches.

Tracings:

JOE Ceph displays lateral and frontal tracings with lines, planes and factors. Factors are color coded to show deviation from the normal. It offers analysis such as Ricketts, Jarabak, Sassouni Plus, Clark, Tweed and RMO's Comprehensive Analysis. You may define your own analysis by selecting from JOECEPH'S 100 factors to store your analysis on any case.

JOE Ceph will also provide you with Airway Analysis and abnormal growth alerts.

Visual Norms:

JOE Ceph provides you with RMO®'s exclusive Visual Norms. You can superimpose the Visual Norms on tracings of the lateral and frontal x-rays giving you a tool for showing patient's problem areas. JOE Ceph can display multiple superimpositions simultaneously.

Arch Analysis:

JOE Ceph's dental arch analysis provides you with information regarding inter and intra-arch relationships. These features include: tooth size, estimation of unerupted dentition size, arch length discrepancy and leeway "E" space estimation.

The Bolton Analysis helps provide information on how upper and lower teeth fit together.

24 Month Growth Forecast without Treatment:

The short range (24 month) Growth Forecast without Treatment will give clear information on the direction of growth. This feature can be used with progress records to distinguish orthodontic changes from natural growth through superimposition on significant areas.

JOE Ceph will also be useful in management of patient images.

System Requirements:

- 2GHZ Intel or AMD class processor
- 1024 x 768 Monitor resolution
- 1 Gig of RAM (2 Gigs recommended)
- Microsoft Windows XP, Windows Vista, Windows 7
- Adobe Flash Player
- X-Ray images must be 1:1 ratio
- X-Ray images must be JPEG, BMP, GIF, or TIF
- X-Ray images must be less than 12" x 12"
- X-Ray images should be 300 DPI
- Administrative access on computer

Product Options:

Joe-Ceph 1 Cal (1 License)
Joe-Ceph 2 Cal (2 Licenses)
Thumb Drive

Part Numbers:

JOECEPH-01
JOECEPH-02
JOECEPH01T

**Joe Ceph, discovering your way
out of the maze of diagnostics**

functionaleducation®

RMO® is placing great emphasis on our Functional Appliances. Other terms that apply to these types of products include Early Treatment, Interceptive Orthodontics, First Phase Orthodontics, etc.

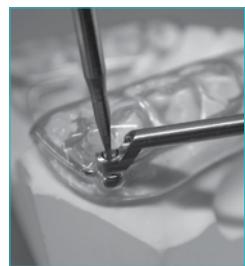

Functional Appliances have been widely used in Europe, Scandinavia and parts of Asia for many years. There is growing interest in North America regarding their use. As an introduction to this section we have included part of an article written by Dr. Franco Bruno. He addresses some of the issues that doctors think about when they are considering whether to use Functional or Fixed Appliance options – or a combination of the two.

The Functional Matrix: A Practical Solution Using the Multi-Family*
By Dr. Franco Bruno

A long-term goal in orthodontics has been to understand the interaction between the Functional Matrix and malocclusion. Research in this area began in the early 19th century and, to date, there is no definitive understanding. Contemporary orthodontics recognizes two opposing views. The “functionalists” believe that the Functional Matrix, especially that of a muscular nature, is the determinant principle of malocclusion. Contrary to this belief is the “mechanistics” view, whose proponents say that muscular dysfunctions are a result of malocclusion. Unfortunately, the latter have yet to submit a theory on the etiology of malocclusion. There are various positions between these two extremes that, to a greater or lesser degree, recognize the influence of the functional matrix on malocclusion. It is difficult for the clinician to address malocclusion both in etiological terms and long-term stability. A primary issue is the probability of relapse after orthodontic treatment. If the Functional Matrix is the cause of malocclusion, and it is not neutralized during treatment, there will be a greater possibility of relapse. However, if the dysfunction is a result of the malocclusion, only its complete resolution will guarantee stability of the case. From our perspective, this ideological dualism is irrelevant.

The philosophy of “Self Confident Orthodontics” views the interaction between the Functional Matrix and malocclusion as a continuous exchange of information between the two components and, therefore, foresees a therapeutic protocol that aims at correcting both parts of the system in order to find the most appropriate solution for long-term stability. The main therapeutic idea is to work on each component at different treatment times. In the absence of definitive scientific evidence, the clinician must develop his/her own viewpoint and objectives to best resolve the patient’s problems and reach a clinical outcome that will be stable over time.

* Excerpt from RMO Clinical Review May 2010, Page 35

Liberty Bielle® Overview

The Liberty Bielle, the newest addition to the RMO® Functional Education System, is a Herbst-type appliance. Its unique design allows it to rotate 360 degrees, maximizing lateral movement and providing comfort, flexibility for the patient, and treatment efficiency to the doctor.

The Liberty Bielle consists of an assortment of precisely engineered and manufactured components of the highest quality. These unique components increase the durability of the appliance by minimizing destructive lateral forces and allowing maximum movement of the mandible in many directions. Liberty Bielle is available in both removable and fixed configurations.

The Liberty Bielle is easy to adapt to any standard bracket and tube fixed appliance system. Combined with your edgewise therapy, multiple orthodontic and orthopedic objectives can be achieved simultaneously.

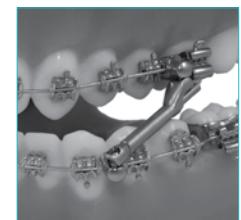

Liberty Bielle® Removable

Kits Order Number	Package Contains		
K01510	4 each: 4.5mm pivots welded to .036" Blue Elgiloy®	2 each: Upper Tube Rod and Lower Rod	4 each: Screws
K01512	4 each: 4.5mm pivots	2 each: Upper Tube Rod and Lower Rod	4 each: Screws
K01511	4 each: 5mm pivots welded to .045" Blue Elgiloy®	2 each: Upper Tube Rod and Lower Rod	4 each: Screws
K01513	4 each: 5mm pivots	2 each: Upper Tube Rod and Lower Rod	4 each: Screws

Liberty Bielle® Fixed

Liberty Bielle Fixed requires no lab construction and can be fitted and adjusted chairside.

Kits

Multi-S® - Multi-Start Appliance

Ideal for children between 4 and 8 years old, the appliance reduces the muscular forces and promotes proper alignment of the teeth. One size fits all and is easily adjustable to each patient.

Order Number	Package Contains
J00805	1 each
J00806	5 each

Multi-T® - Multi-Trainer Appliance

A pre-orthodontic treatment appliance designed to improve facial and dental development in children (mixed dentition) and reduce problems associated with: swallowing, thumb sucking, tongue thrusting, labial dysfunction, respiratory problems.

Order Number	Package Contains
J00800	1 each
J00801	5 each

Multi-TB® - Multi-Trainer for Brackets

Suitable for both children and adults wearing brackets. One size fits all, easily adjustable to each patient.

Order Number	Package Contains
J00990	1 each
J00991	5 each

Multi-P® - Multi-Positioner Appliance

The Multi-P guides erupting teeth with the help of the patient's own muscle forces to an ideal position in the dental arches. A good occlusion is established and development of severe malocclusions avoided. The appliance has a high and low model. The high model, designed for the treatment of open bite cases, has a thickened molar region. Measurements are from left side to right side between lateral and cuspid.

Low Model Size Number	Part Number	High Model Size Number	Part Number	Maxillary Measurement (mm)	Mandibular Measurement (mm)

In perspective, the 3D FIXED/REMOVABLE System (Wilson) should be considered as a comprehensive appliance supplementing system; it is a "tool box" of options. The numerous 3D options help you add to the effectiveness of the appliances you have chosen to deal with your diagnosis and treatment plan. Also, it is important to note that each 3D module is a subsystem by itself. That is, each has specific areas for use and each has numerous supplementing options.

All principles have been proven through successful usage for many decades. What is new and unique is the way the principles were engineered by Dr. William Wilson and Dr. Robert Wilson into an easy-to-use plug-in, plug-out system of 12 modular options. Over 100 different 1st Phase treatment movements can be achieved with minimum number of appliances and maximum patient comfort and satisfaction.

The 3D Lingual Arch System (Wilson) is the result of four decades of lingual arch use, analysis and research, change and experimentation. All types of non-bracket lingual appliances and molar band/tube combinations were evaluated. Different orthodontic mechanical needs and possibilities were considered. The originators, Dr. William Wilson and Dr. Robert Wilson were also concerned with harmonious lingual arch usage with various types of fixed and removable techniques.

Like most things found in the dental profession, successful use depends upon understanding and development of skills. The following are educational materials and services.

Basic Textbooks: By Dr. Robert Wilson and Dr. William Wilson

Book 1 Enhanced Orthodontics

This book reviews basic concepts and describes how the different modules affect 100 different 1st Phase treatment movements. Twenty case histories are described and documented. 435 pages, 700 illustrations.

Order Number **P00040**

Book 2 Enhanced Orthodontics: 3D® Multi-Directional Force Systems Fabrication

This laboratory manual illustrates and describes step-by-step how the 3D Modules are adapted and used. It is a "how to" book on making modular appliances.

Order Number **P00042 – available on Website download only**

3D® Wilson® Toolbox

The Wilson Toolbox contains an assortment of the most popular sizes of appliances conveniently packaged to begin using the system.

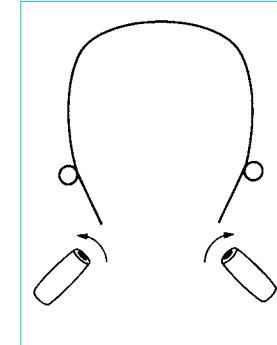

Order Number	Kit Components	
3D® Wilson® Toolbox	K00850

3D® Transfer System Overview

The key to in-practice and laboratory 3D Appliance processing.

- Preformed bands with 3D Lingual Tubes and buccal tubes with .045" or .051" headgear tubes of your choice are fitted and cemented.
- If molars are rotated, making it difficult for 3D Maxillary Bimetric Distalizing Arches to be fitted into the headgear tubes, adjust as follows:
 - Form an .018" molar rotating arch with horizontal helices just anterior to the "toed-in" headgear tube. Bend the distal ends of the arch wire to accomplish the desired rotations so the posterior sections can be easily placed into the headgear tubes.
 - Tie-in arch wire. When molars have rotated as desired, remove the arch wire. You are now ready to employ the 3D Transfer System.

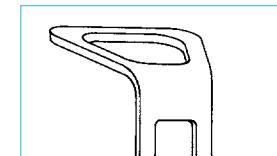

To correct upper molar rotations so 3D® Bimetric Distalizing Arch will fit into buccal tube.

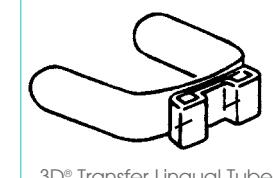

3D® Transfer System

	Order Number	Package Contains
3D® Transfer Insert	A04198	10
3D® Transfer Lingual Tube	A04199	10

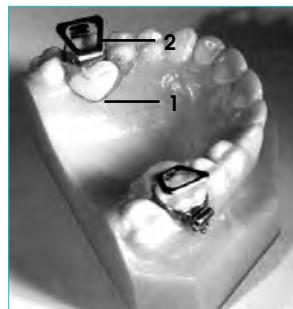

- Reduces time consuming laboratory related procedures
- Laboratory impression can be taken during active treatment (No need to stop treatment)
- Laboratory can produce very accurate FIXED/REMOVABLE appliance
- A time/cost saver; excellent for in-practice and outside 3D laboratory appliance fabrication procedures

3D® Transfer Insert

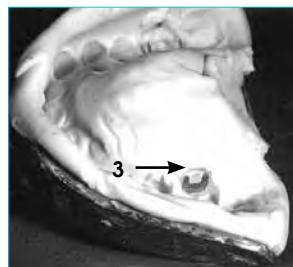

3D® Transfer Lingual Tube

Office Procedures

RMO® TruForm Molar Bands, prewelded with buccal tubes and 3D® Lingual Tubes have been cemented in place on the patient.

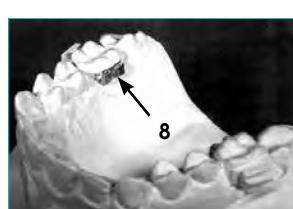

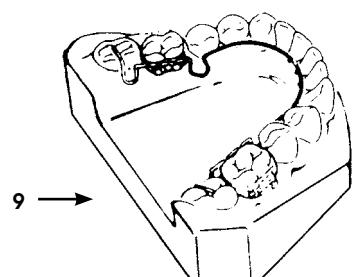

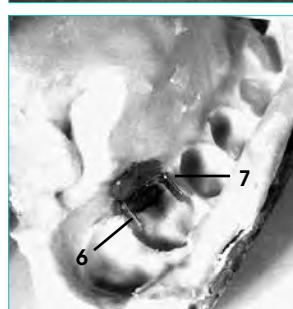

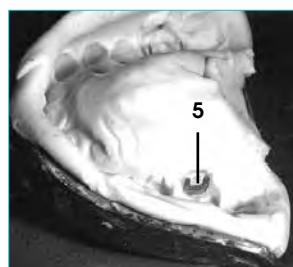

1. The 3D Lingual Tubes are covered with wax.
2. Insert the 3D Transfer Inserts into the 3D Lingual Tubes. The posts are designed as loose-positioning posts for the 3D Transfer System, and not as the friction-fit posts in the 3D appliances.
3. Take soft colloid impression and remove after setting. Note how the insert posts are protruding through the impression.
4. The impression is now sent to the laboratory for 3D appliance fabrication.

Laboratory Procedures

Doctor sends in an impression with 3D Transfer Inserts already in position.

5. With scalpel, remove 3mm of colloid, lingual to the posts, for seating clearance.
6. Seat the 3D Transfer Lingual Tubes on the protruding posts. If necessary, contour the retaining tabs of the 3D Transfer Tube to insure retention in the stone model.
7. Add sticky wax over the 3D Lingual Tubes and fill the space between the tubes and colloid.
8. Pour with stone and separate. The 3D Transfer Lingual Tubes will be accurately positioned and securely attached to the stone model.
9. Proceed to fabricate the 3D appliance on the stone model.
10. With knife, remove the 3D Transfer Inserts from the colloid. Also, remove the 3D Transfer Lingual Tubes from the stone formed for future reuse or retain in stone model for future 3D modular components.
11. For commercial laboratories, send the finished 3D appliance to the doctor on the stone model for reference.

3D® Lingual Tube (Wilson®)

The key to the 1st Phase System (Wilson) is the 3D Lingual Tube. All 3D lingual modules plug into these tubes. They are available with and without prewelded hooks. They can be purchased separately or as a preweld on RMO TruForm Molar Bands.

- New, improved "click-fit" assures positive post seating

	Order Number	Package Contains
3D® Lingual Tube	A04315	10
3D® Lingual Tube with Gingival Hook	A04314	10

3D® Buccal Tubes (Wilson®) - Maxillary

The 3D Wilson Maxillary Double Buccal Tubes are available with 6° Distal Offset. These tubes are designed with .018" x .030" (.457mm x .762mm) or .022" x .030" (.559mm x .762mm) dimensions and an extra long extended gingival .045" (1.143mm) round headgear tube to help prevent tipping of the molar when distalizing.

The 6° Distal Offset tube is produced as an integrated one-piece design, utilizing state-of-the-art Metal Injection Molding (MIM) manufacturing. The rectangular tube is approximately 2mm shorter than the headgear (round) tube, to increase the inter-tube distance with the 2nd molar. The rectangular tube is convertible, with an integrated tie wing design. It is available with a hook.

	On Bases	Tubes Only/ On Bands	On Bases	Tubes Only/ On Bands	Package Contains	
		.018 (.457mm)		.022 (.559mm)		
With Hook	R	A08260	A04360	A08262	A04362	10
	L	A08261	A04361	A08263	A04363	10

3D® Buccal Tubes (Wilson®) - Mandibular

The 3D Wilson Mandibular 1st Molar Tube consists of two rectangular arch slots with a mesial hook. The reduced friction slot reduces corner drag when using square or rectangular wire. Smooth buccal surface; rounded edges for patient comfort. Increased mesial distal length for increased control.

	Order Number	Package Contains
	.018 (.457mm)	.022 (.559mm)
With Hook	R A04370	A04372 10
	L A04371	A04373 10

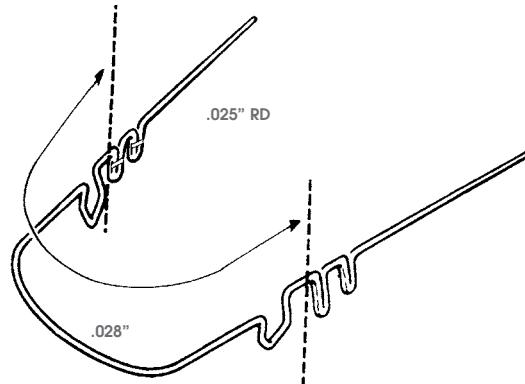

Buccal Tubes

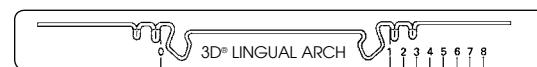

However Dr. Wilson recommends the use of buccal tubes with gingivally placed .045" head gear tubes, other buccal tubes of various fixed appliances with occlusally placed headgear tubes can be successfully used with 3D Maxillary Bimetric Distalizing Arch procedures.

When using 3D Maxillary Bimetric Distalizing Arches with .045" or .051" occlusally placed buccal tubes, it is necessary to adjust the distal buccal section of the arch. A step up bend is made anterior to the Omega Stop assembly. This enables the distalizing elements to function in the occlusally placed tube while the anterior elements of the arch are properly aligned with anterior brackets.

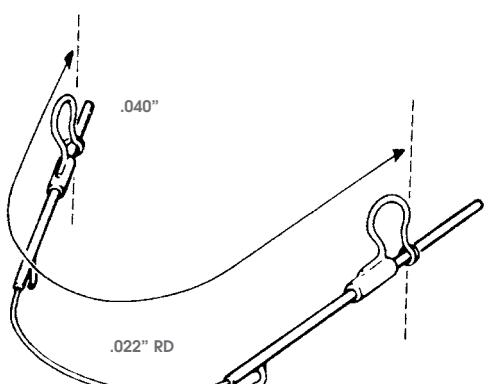

RMO® now has buccal tubes and tube variations for all popular techniques. If your practice is interested in incorporating selected 3D 1st Phase FIXED/REMOVABLE (Wilson) options into your treatment regimens, it is easily done. Just order 3D Lingual Tubes and your preferred buccal tubes prescription welded to RMO TruForm Molar bands.

**3D® Lingual Arch**

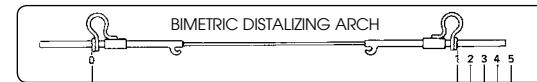

- Easy vertical placement and removal
- Mandibular anchorage
- Holding arch for extraction and non extraction cases
- Mandibular arch length increase, including slight molar distalization, one side at a time
- Lower molar rotation, torquing and tipping
- Second molar control

Size	Order Number	Package Contains	Kit Contains

Omega Adjustable Stop

- Crimpable .040 ID
- Use the i00548W modular Omega plier for adjustments

**5mm Coil Spring**

Open Elgiloy® coil spring. Does not require heat treatment. For use with Bimetric Distalizing Arch.

.010" x .045" x 5mm **F00125** 50

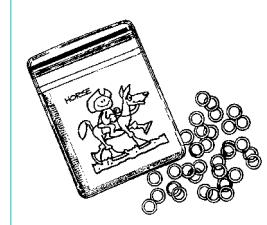

Open Orthonal® Coil Spring, constant force gradient of nickel titanium when distalizing (Schedule II elastics only).

.012" x .045" x 5mm **F00126** 10

Energy Pak™ Elastics

Order Number	Package Contains (approximately)
Nonextraction cases	
5/16" 2 oz.	J01103 2,000
5/16" 3 oz.	J01113 2,000
Extraction cases	
1/4" 2 oz.	J01102 2,000
1/4" 3 oz.	J01112 2,000

Elastic Load Reduction Principle For the 3D® Maxillary Bimetric Distalizing Arch
SCHEDULE #1 (2 oz. elastics)

Used with:

- Flaring lower incisors
- Small mandibular roots

First 5 days of treatment use:	Second 5 days of treatment use:	Last 11 days or until next visit use:
3 - 2 oz. elastics	2 - 2 oz. elastics	1 - 2 oz. elastics

Using 2 oz elastics, three elastics should be used during the first five days, two during the second five days and one during the final eleven days of the treatment plan. Fresh elastics are applied daily. Elastics must be worn 24 hours each day between appointments, including during meals.

Use RMO® 5/16" 2 oz. elastics for non-extraction cases.

Order No. **J01103**

Use RMO® 1/4" 2 oz. elastics for extraction cases.

Order No. **J01102****SCHEDULE #2** (3 oz. elastics)

Most common usage:

- Class II Div. 2
- Class II Div. 1 with closed bite
- Cases with steep cusps
- Adult cases

First 10 days of treatment use:
Until next visit use:

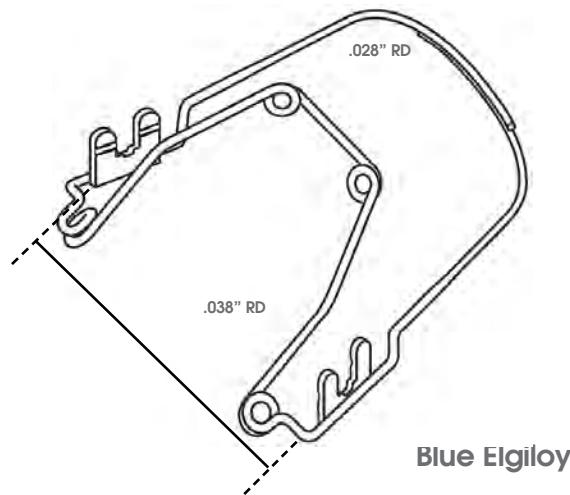

2 - 3 oz. elastics 1 - 3 oz. elastics

Two RMO® 3 oz. elastics used during the first 10 days. Then, one 3 oz. elastic is worn until next adjustment. Fresh elastics are applied each 12 hours and are worn 24 hours daily, including during meals.

3D® Quad Helix

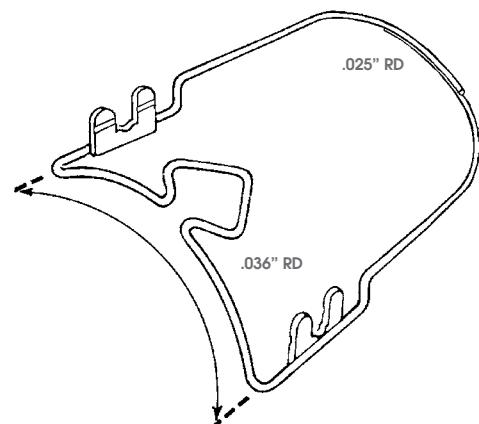

- Easy vertical placement and removal
- A single FIXED/REMOVABLE alternative to multiple removable appliances
- Bilateral molar expansion
- Bilateral maxillary arch expansion
- Molar rotation, torquing and tipping
- Selective cupid and bicupid expansion
- Excellent for correcting cross bites in pediatric dental patients

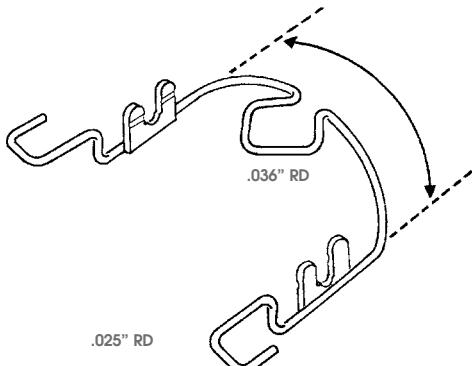

Size	Order Number	Package Contains	Kit Contains
1 - 25mm	A04308	3	1
2 - 27mm	A04309	3	1
3 - 31mm	A04310	3	1
4 - 34mm	A04311	3	1
5 - 37mm	A04312	3	1
6 - 40mm	A04313	3	1
Assorted	K00770	-	6

**Blue Elgiloy®**
3D® Multi-Action Palatal Appliance

- Some clinicians have expressed a need for a less complex expansion appliance; this is the alternative to the Quad Helix
- Excellent for adult orthodontics
- Easy vertical placement and removal
- More than just a palatal arch
- A single FIXED/REMOVABLE alternative to multiple removable appliances
- Total maxillary arch expansion
- Selective cupid and bicupid expansion
- All major rotations, torquing and tipping

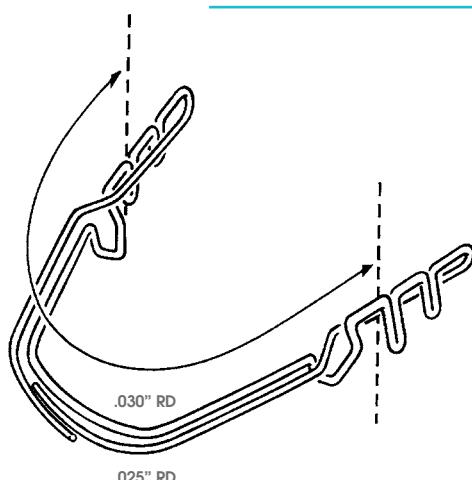

Size	Order Number	Package Contains	Kit Contains
1 - 32mm	A04320	3	1
2 - 36mm	A04321	3	1
3 - 40mm	A04322	3	1
4 - 44mm	A04323	3	1
5 - 50mm	A04324	3	1
6 - 56mm	A04325	3	1
Assorted	K00780	-	6

**3D® Palatal Appliance**

- Easy vertical placement
- Transpalatal arch
- Molar expansion or contraction
- High pull headgear control
- Molar rotation, torquing and tipping
- Molar expansion
- Palatal cusp intrusive action to offset extrusive action during high pull headgear usage

Size	Order Number	Package Contains	Kit Contains
1 - 32mm	A04330	3	1
2 - 36mm	A04331	3	1
3 - 40mm	A04332	3	1
4 - 44mm	A04333	3	1
5 - 50mm	A04334	3	1
6 - 56mm	A04335	3	1
Assorted	K00790	-	6

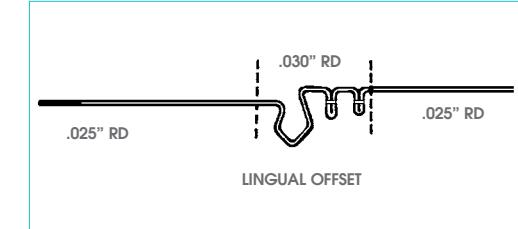

**3D® Multi-Action Mandibular Appliance**

- Easy vertical placement and removal
- Solves many problems for those using Crozat-type appliances
- Arch expansion
- Selective expansion
- Incisor advancement
- Slight molar distalization (one side at a time)
- Lower molar rotation, torquing and tipping

3D® Sectional

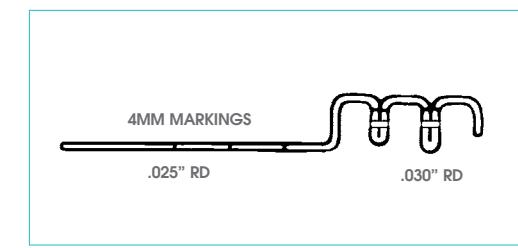

- Easy vertical placement and removal
- Impacted cupid activator
- Simple expander
- Simple bicuspid space maintainer
- Simple bicuspid space regainer
- Cantilever resistor, molar tip-back resistor

	Order Number	Package Contains
Maxillary Right/Mandibular Left	A04345	5
Maxillary Left/Mandibular Right	A04346	5

3D® Adapter

- Easy vertical placement and removal
- Simple space maintainer
- Mandibular molar tip-back resistor
- Maxillary molar tip-back resistor
- Cross elastic hook
- Simple expander

	Order Number	Package Contains
Maxillary Right/Mandibular Left	A04347	5
Maxillary Left/Mandibular Right	A04348	5

3D® Space Maintainer

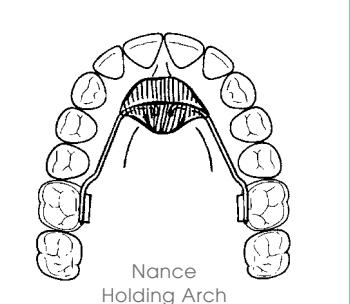

- Easy vertical placement and removal
- Second bicuspid space regainer
- Temporary FIXED/REMOVABLE functional space maintainer/bridge

	Order Number	Package Contains
Maxillary Right/Mandibular Left	C00131	5
Maxillary Left/Mandibular Right	C00132	5

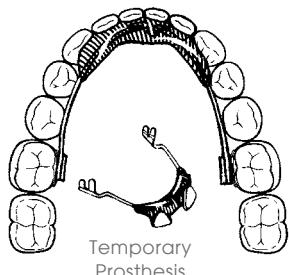

3D® D.Y.S. Module

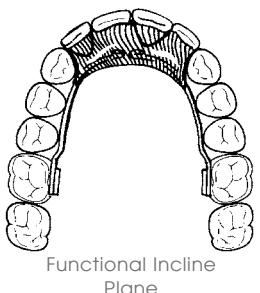

- The 3D D.Y.S. (Do-It-Yourself) Module (Wilson) provides a basic module from which a variety of individual upper and lower FIXED/REMOVABLES can be fabricated. One unit is for upper right and lower left. The other unit is for upper left and lower right. The 3D D.Y.S. Module is available in .036" and .040" TRU-CHROME Stainless Steel. All wire sizes are laser welded to the 3D Posts, which plug into the 3D Lingual Tubes. The many creative ways this 3D Module can be used in individualized FIXED/REMOVABLE appliance construction are limited only by one's imagination
- Easy vertical placement
- Universal lingual attachment
- Multiple FIXED/REMOVABLE laboratory fabricated appliances to suit numerous individual needs

SIMPLE SPACE MAINTAINERS/DENHOLTZ MUSCLE ANCHORAGE

**Space Maintainer Kit**

An introductory space maintainer assortment. A starter kit with bands and space maintainers for banding maxillary and mandibular 6-year molars. Bands are provided in the size range most frequently used. Space maintainers can be soldered to RMO bands.

Order Number

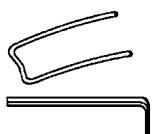

K00005

Package Contains

34 preformed seamless universal bands, 1 each of sizes 11 through 27, Max. and Min., 10 open end maintainers, 10 occlusal bar-type maintainers

Open End Maintainer

.040" (1.02mm) stainless steel
Occlusal bar-type

**3D® Space Maintainer and Space Regainer (Wilson®)**

Features:

- Plugs into 3D Lingual Tube welded to molar band
- Effective in permanent and mixed dentition
- Positive space maintainer
- Adjustable for rapid second bicuspid space regainer
- Convertible to functional maintainer or temporary bridge by adding artificial tooth
- Removable
- Interchangeable with other 3D Modules for active treatment with no band changeovers

The Freedom of Movement...

Liberty Bielle® Fixed, the newest addition to the RMO® Functional Education® System, is a modern Herbst-type appliance. Its unique ball joint configurations allow it to rotate 360 degrees, which maximizes lateral movement, provides comfort and flexibility for the patient, and ensures treatment efficiency all while minimizing appliance breakage.

Liberty Bielle®

Kussick Orthopedic Inclines® Overview

The Kussick Orthopedic Incline is for the early correction of deep bites and deep bites with overjets. It achieves any or all of the following:

- It relocates the mandible forward in retrognathic cases
- It retracts the maxillary and bimaxillary protrusions as the mandible is relocated forward
- It brings about the formation of the labial anterior mandibular alveolar bone as it increases arch length
- The opening of the bite enables the buccal alveolar bone and the bicuspids of the mandible to rise and the maxillary arch to drop down. Thereby, the Curve of Spee is leveled and the vertical dimension is corrected

	Order Number	Package Contains
Kussick Orthopedic Inclines®	J00710	
The Kussick Orthopedic Incline package contents are:		
• Kussick Orthopedic Incline	1	
• Appliance Case	1

The Kussick Orthopedic Incline 5-Pak package contents are:		
• Kussick Orthopedic Incline	5	
• Instructions – Patient	5	
• Instructions – Clinician	1	

Kussick Tongue Retainer Overview

The Tongue Retainer efficiently corrects and controls tongue thrusting, thumb sucking and lip habits. It functionally closes anterior open bites and reduces accompanying overjets. The Tongue Retainer applies to all of the following treatment considerations:

- It retrains the tongue to stay in its biological position during swallowing
- It allows the upper anterior teeth and alveolar bone to be located downward and forward

	Order Number	Package Contains
Kussick Tongue Retainer	J00730	

The Kussick Tongue Retainer package contents are:

• Instructions – Patient	5	
• Instructions – Clinician	1	

Mandibular prognathism exists in many children, and is often associated with maxillary insufficiencies.

Maxillary insufficiencies are conditions which embody maxillary brachygnathia, retrognathia and micrognathia; the causes of these disorders may be constitutional. However, according to Drs. Delaire and Verdon of France, most often the disorders (which are at the origin of a maxillary deficiency) are functional.

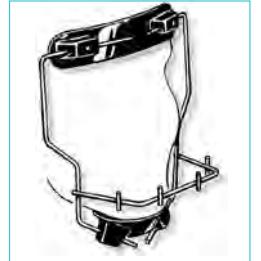

The Delaire Orthopedic Mask is an excellent appliance for intercepting and correcting diagnostically selected maxillary deficiencies of young patients. "Young" typically means from 3-1/2 to 4 years old or from the time when a double arch (lingual and labial) with bands can be used.

Orthopedic Face Mask (Delaire) Stainless Steel

- Excellent method for intercepting Class III cases caused by maxillary insufficiencies. Can modify orientation of the maxilla, in relation to the upper cranial implantation
- Can improve the growth of the anterior part of the maxilla
- Can cause mesial movement of the upper dento-alveolar arch, in relation to the maxillary base
- Can cause distal movement of lower dento-alveolar arch, in relation to mandibular base
- Heavy forces applied throughout treatment by elastics attached to anchorage points
- Made of .078" (1.98mm) wire and acrylic, set screws held in metal housing in acrylic parts. Vertical height adjustable to 13/16" (2cm)
- Elastics and wrench included

	Order Number	Package Contains

My T Guard® Mouthguard

INTRAORALEXTRAORAL

intraoralextraoral

RMO® offers a complete range of intraoral elastics and elastomeric ligatures. Intraoral elastics (Energy Pak™ Elastics & Bulk Elastics) are latex containing products whose diameter and force delivered are identified by transportation icons, as well as part numbers. RMO®'s other elastomeric products do not contain latex. Elastomeric ligatures are produced in several configurations, single case sticks, canes, etc., to give offices options for convenience.

Energy Chain™ is a uniquely formulated orthodontic chain and exclusive RMO®. Energy chain consistently shows the least force degradation over time compared to all other brands in multiple independent university studies. Ortho-Jel® is a chromatic changing alginate which helps an assistant to know when setting occurs.

Due to strong market requests, RMO® is once again producing aluminum impression trays in vibrant colors. The trays are reusable, can be sterilized, and can be adapted to an individual patient by bending; this is not possible for stainless steel or plastic trays. RMO® has developed and manufactured systems with input from Dr. Ricketts over a period of 50 years. Some of the products that have emerged from this collaboration are Penta-Form™ Loop-Style Facebows and lip bumpers. Spring-Gear® is a unique cervical headgear that contains NiTi springs for consistent force delivery regardless of patient head movements, and is comfortable enough to wear overnight. My T Guard is a patented 3-layer injection molded mouth guard that a wearer cannot bite through. It is extremely cost effective since it can be adapted in a 1-appointment office visit – no lab bill or patient recall to deliver an appliance. Unlike custom mouth guards, My T Guard can be adapted many times to a changing dentition (after all, teeth are moving during treatment); it has been shown to reduce possibilities of concussions because its design dissipates impact forces laterally to the rear of the jaw rather than vertically.

intraoralextraoral

ENERGY PAK™ ELASTICS

- Superior quality, pure latex (contains natural rubber latex which may cause allergic reactions). Neon elastics are offered latex-free.
- Precision cut provides consistent forces
- Three types available: general purpose, cuspid-to-cuspid, and extra oral
- Wide size selection permits precise degree of control
- Packaged in illustrated zip-lock bags for dispensing convenience- (approx. 2,000 elastics)
 - J01100-J01144, J01400-J01409: 100 elastics per bag; 20 bags to each package
 - J01156-J01185: 50 elastics per bag; 40 bags to each package
 - J01400-J01411: 100 elastics per bag; 50 bags per box
- Excellent resistance to fluid absorption

The patented Spring-Gear is comfortable, safe headgear which continues to exert equal forces on the dentition, regardless of which head movements are made. The Spring-Gear was developed and comprehensively tested in orthodontic practices and patented worldwide. Comfort, freedom of movement, safety and, of course, effectiveness were the principles adopted during development.

Applied Force

Because a nickel-titanium spring is used to develop the force, it is maintained at the level set by the clinician until he/she changes it.

Comfort

The flexible, transparent Spring-Gear tube adapts to fit every neck size. The soft, blue neck cushion on the interior is washable and can be replaced by a new one if required.

Safety

A simple, but effective, system ensures that the snap-way attachments detach from the face bow, if excessive force is applied. Ingenious design and choice of material guarantees that the releasing force remains constant throughout treatment.

Equal Forces

A virtually friction-free nickel-titanium spring ensures that the forces exerted on the dentition scarcely change regardless of the direction in which the patient moves his/her head.

A study by the Netherlands Organization for Applied Scientific Research showed the forces on the 1st molars did not change when the head moved with patients wearing Spring-Gear cervical headgear. This is a problem with conventional headgear in that the forces on the 1st molars change with each movement of the head. This is because the headgear does not slide around the neck like it does with Spring-Gear.

Fitting the Spring-Gear to the individual patient is very simple. Sliding the snap-way attachments along the strap enables the nickel-titanium spring to be extended to the point where ideal strength is reached.

	Order Number	Package Contains
Spring-Gear®	J00521	1 Spring-Gear/1 Neck Pad
Replacement Neck Pads	J00525	10

Safety Headgear System reduces the potential hazard of slingshot rebounds of headgear. If the facebow is pulled with excessive force, clips holding the spring release modules disconnect automatically and disengage the facebow. Reassembly after release is easy for the patient.

The system is available with cervical traction pads, high-pull head straps and bilateral two-part safety release modules. Steel coil springs are incorporated in modules to provide constant traction force. When contracted, springs are calibrated to produce medium and heavy forces. Facebow attachment straps are color-coded to easily identify force levels. Neckpads and head straps are in denim fabric.

	Order Number	Package Contains
Cervical Neckpad with 2 Modules		
Medium (14 oz.) white straps	J00390	1

Modules Heavy (18 oz.) gray straps	J00397	2

The Ultimate in Mouthguard Protection

RMO's My T Guard® is made of a special material that exactly molds to your patient's individual teeth including braces. Even as teeth move during orthodontic treatment, the My T Guard can be refitted to accommodate change. My T Guard is a dental device designed to absorb and dissipate severe blows to the mouth area. The research and testing utilized in its development are far superior to industry standards.

If a blow to the face occurs, My T Guard allows severe impact forces to be immediately damped and directed away from teeth and delicate facial bones, including the TMJ. This dampening and redirecting of the impact forces help to prevent concussion-causing vibrations from penetrating the nasal cavity, brain and head. My T Guard also serves to reduce trauma to the lips, tongue, cheeks and gum tissue.

Further enhancing its protective capabilities is the fact that it is the only mouthguard capable of taking a full upper and lower dental impression. No other mouthguard comes close to protecting your patient as well as the My T Guard mouthguard.

As good as it gets...

Move teeth rapidly and efficiently with RMO®'s Energy Chain™

RMO®'s Energy Chain™ is the proven leader among all brands of elastic chain. Numerous universities and clinical researchers have shown that RMO®'s Energy Chain™ outperforms virtually all other elastic chains available.

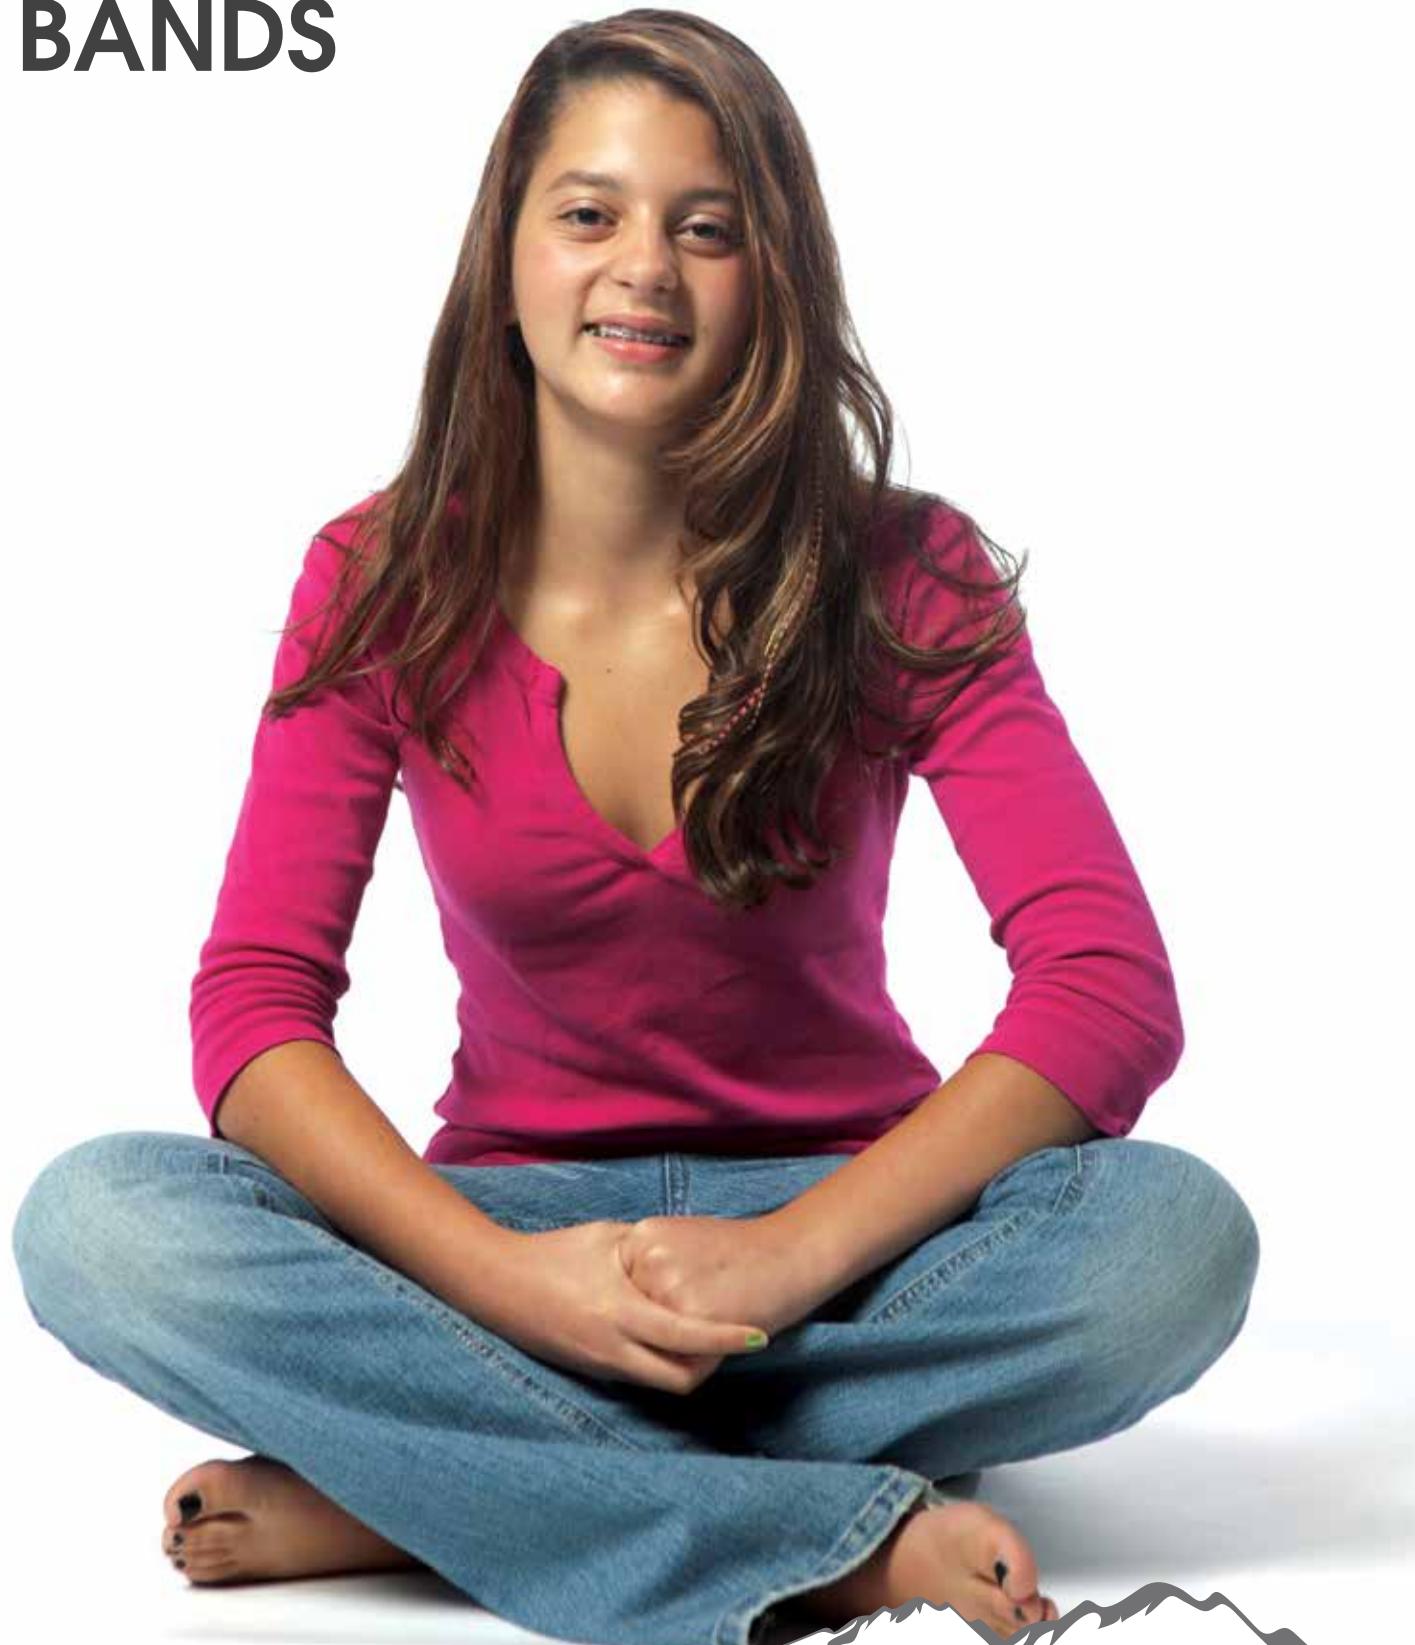

Energy Chain™ is made from a tough elastic material that is stain resistant, tasteless, and delivers a uniform continuous force over significantly longer periods of time in comparison to most other elastic chains.

Energy Chain™

The Proper PREformed BAND

Orthodontic bands have been basic to the progress of orthodontics since the beginning of this science. Techniques have changed and materials have improved; moving from precious metals, to stainless steel preformed orthodontic bands developed first by Rocky Mountain Orthodontics® (RMO®).

While prefabrication had been tried before, the application of stainless steel made it possible to provide greater edge strength, improved fitting qualities, and more aesthetically pleasing appliances. The breakthrough in reduced manufacturing procedures of bands stemmed from original RMO® engineering and clinical testing that made it possible to cut operating time by more than 75 percent.

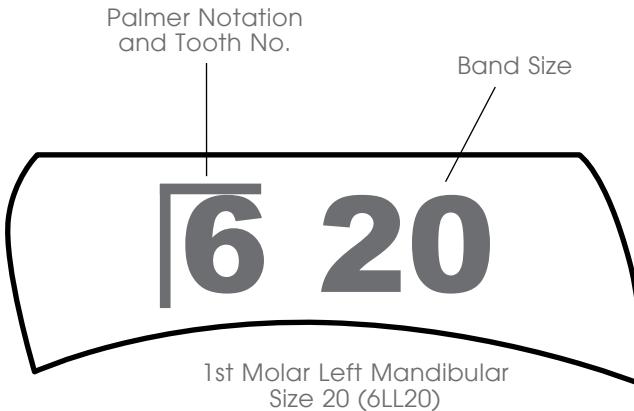

- Superior Temper - All RMO® TruForm bands are stress relieved, resulting in a consistent and reliable temper for quick and accurate adaptation to the anatomy of the tooth every time.
- Ideal Contour - The shape of TruForm bands is established by clinical use. The occlusal edge is slightly rolled to enhance fitting and prevent cement ridge build-up. TruForm bands are properly fit accurately the morphology of the tooth anatomy.
- RMO® TruForm molar bands are available in 36 sizes.

DISPENSING AND STORAGE SYSTEMS

Band Trays

RMO® offers a complete band storage and chairside dispensing system which fits with the permanent marking system. These versatile, space-saving series of storage and dispensing units are capable of holding all RMO bicuspid and molar bands.

Inventory Organization

Each of the formed compartments in the trays vary in size to accommodate greater quantities of the most commonly used sizes.

Versatile

Each printed tray format includes a formed tray and a clear, locking lid. Each tray includes a label that indicates type of band, maxillary, or mandibular.

Molar Band Tray

PREWELD POSITION GUIDE

Angulation Guide

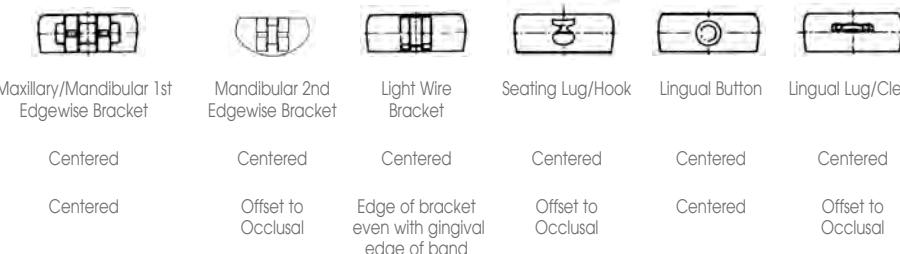

Orders for angulated attachments will be positioned and angled per the standard technique of the specific attachment, unless otherwise specified.

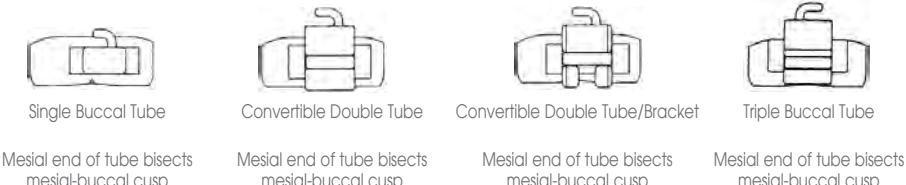

+ Distal Root Tip
- Mesial Root Tip

Position Guide

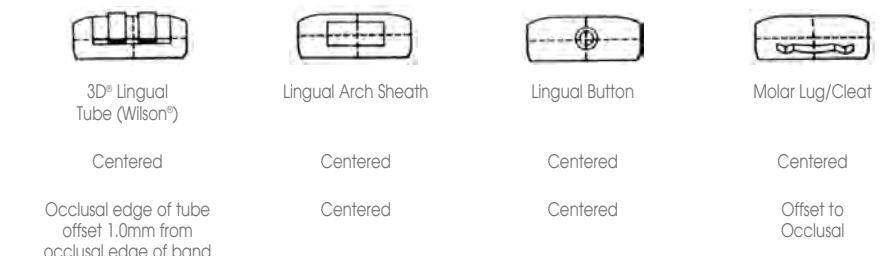

The weld positions illustrated are standard and will vary according to the specific attachment and technique. Weld positions are subject to change as new techniques introduce new variations. RMO proudly offers the flexibility of custom placement assemblies for all prewelds per customer specification. Please allow additional fabrication time for all custom placement assemblies.

bracket&tubesystems

RMO® offers brackets in stainless steel, ceramic, and composite materials to meet the needs of all offices. New to the line is FLI® SL, an innovative self-ligating bracket using a patented rotating locking mechanism. RMO®'s flagship bracket is the 6-tie wing Synergy® bracket available in multiple prescriptions, with and without a mesh base. The recently developed FLI® Twin bracket is now available in Roth, MBT, and Ricketts® Original prescriptions. The FLI® system is complete with the addition of ceramic: FLI® CSL (Ceramic Self-Ligating), FLI® Clear; and composite: FLI® Composite brackets. The "gold standard" for ceramic brackets is represented by the twin bracket: LUXI® II that has an 18kt gold liner in the arch slot for reduced friction, and 6-tie wing Synergy LUX SWLF® also having an 18kt gold liner in the arch slot. To meet the renewed interest in lingual orthodontics, the iTT-R® system is an excellent choice.

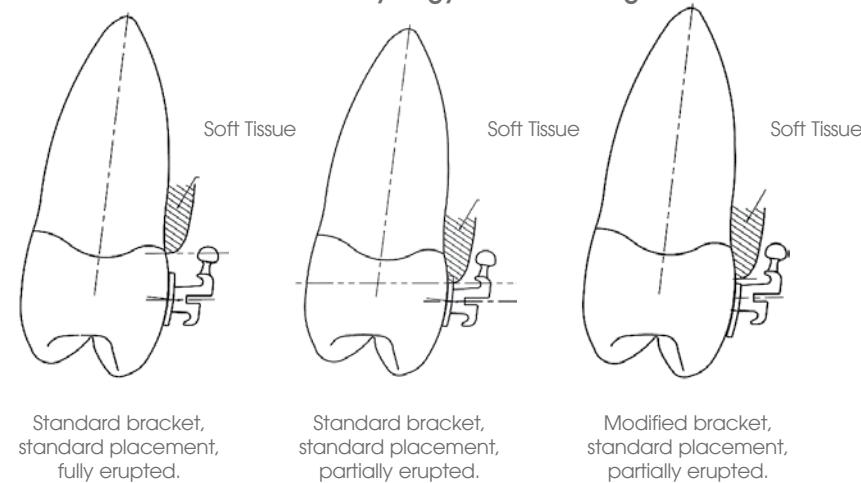

The FLI® system of buccal tubes has been expanded. An increased number of choices for torque in both maxillary and mandibular tubes are available. There are also Mini 2nd molar tubes that are very popular due to their small size and large lead-in design. As an aid to select single, double, and triple tubes consult the charts at the end of this section. Images, as well as prescriptions are displayed. Tubes available for direct bonding or as a preweld are also indicated in the tables.

bracket&tubesystems

GINGIVALLY OFFSET BICUSPID BRACKETS

Early treatment clinicians using fixed appliance systems reported difficulty in bonding the partially erupted 1st and 2nd bicuspids using conventional brackets. This situation can cause soft tissue impingement. (Please see illustrations below.)

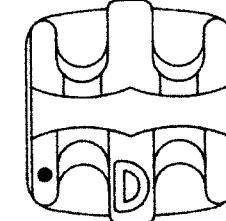

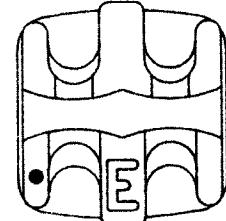

These brackets are also available in the RMO Synergy® bracket design.

The gingivally offset bracket option has proven very successful and has been carried over to both upper and lower bicuspids in many of RMO®'s bracket systems. The clinician is able to bond the bicuspids earlier. In doing so, the

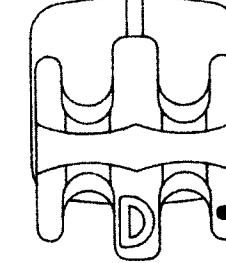

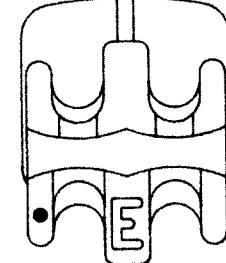

tendency for the bicuspid brackets to end up too far occlusally is eliminated. The gingivally offset bonding base (relative to the bracket) also reduces interference and measurably decreases bond failure.

Conventional placement of lower 2nd bicuspid

Conventional placement of lower 1st bicuspid

Gingivally offset lower 2nd bicuspid

Gingivally offset lower bicuspid

NOTE: For double and triple tubes – the auxiliary arch slot and round tube will be called out if different from main arch slot.

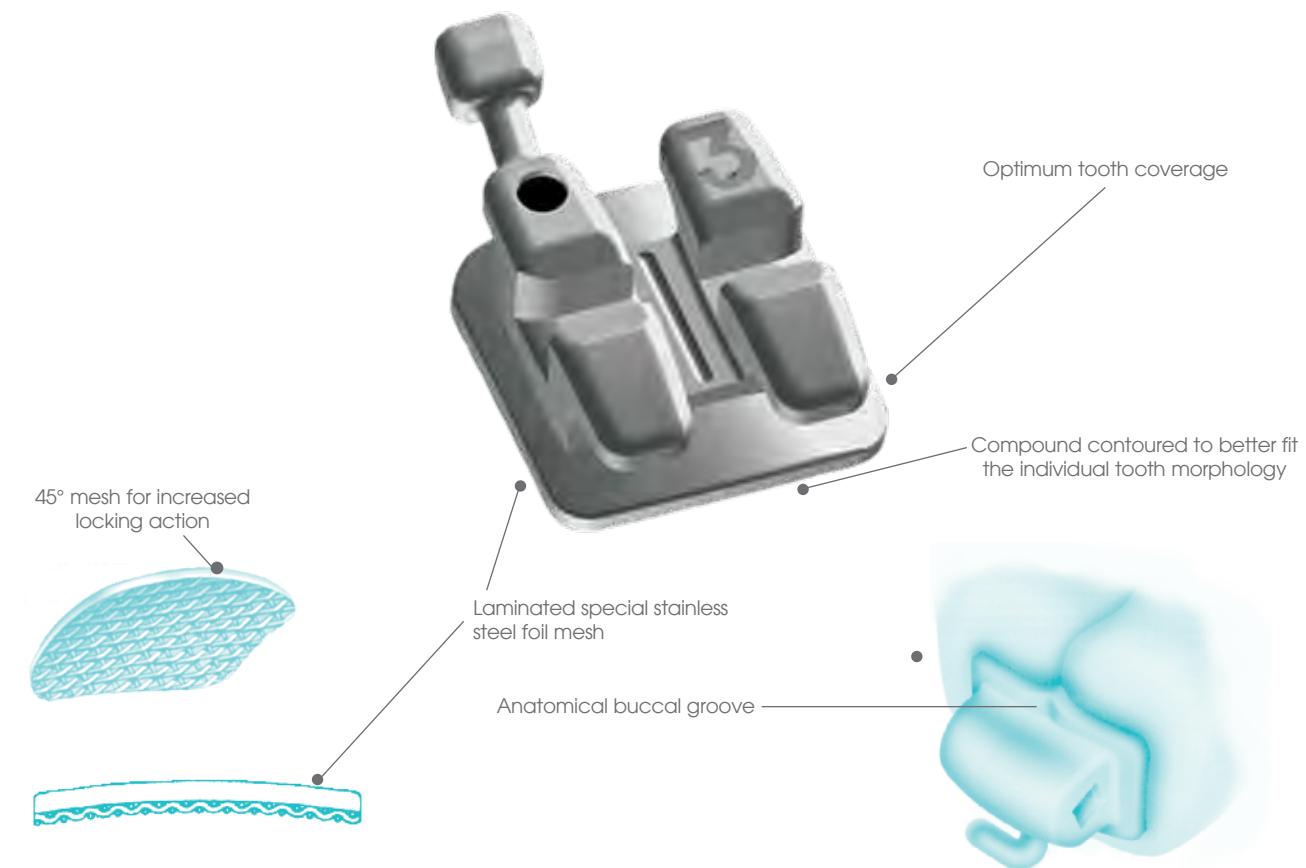

bracket&tubesystems

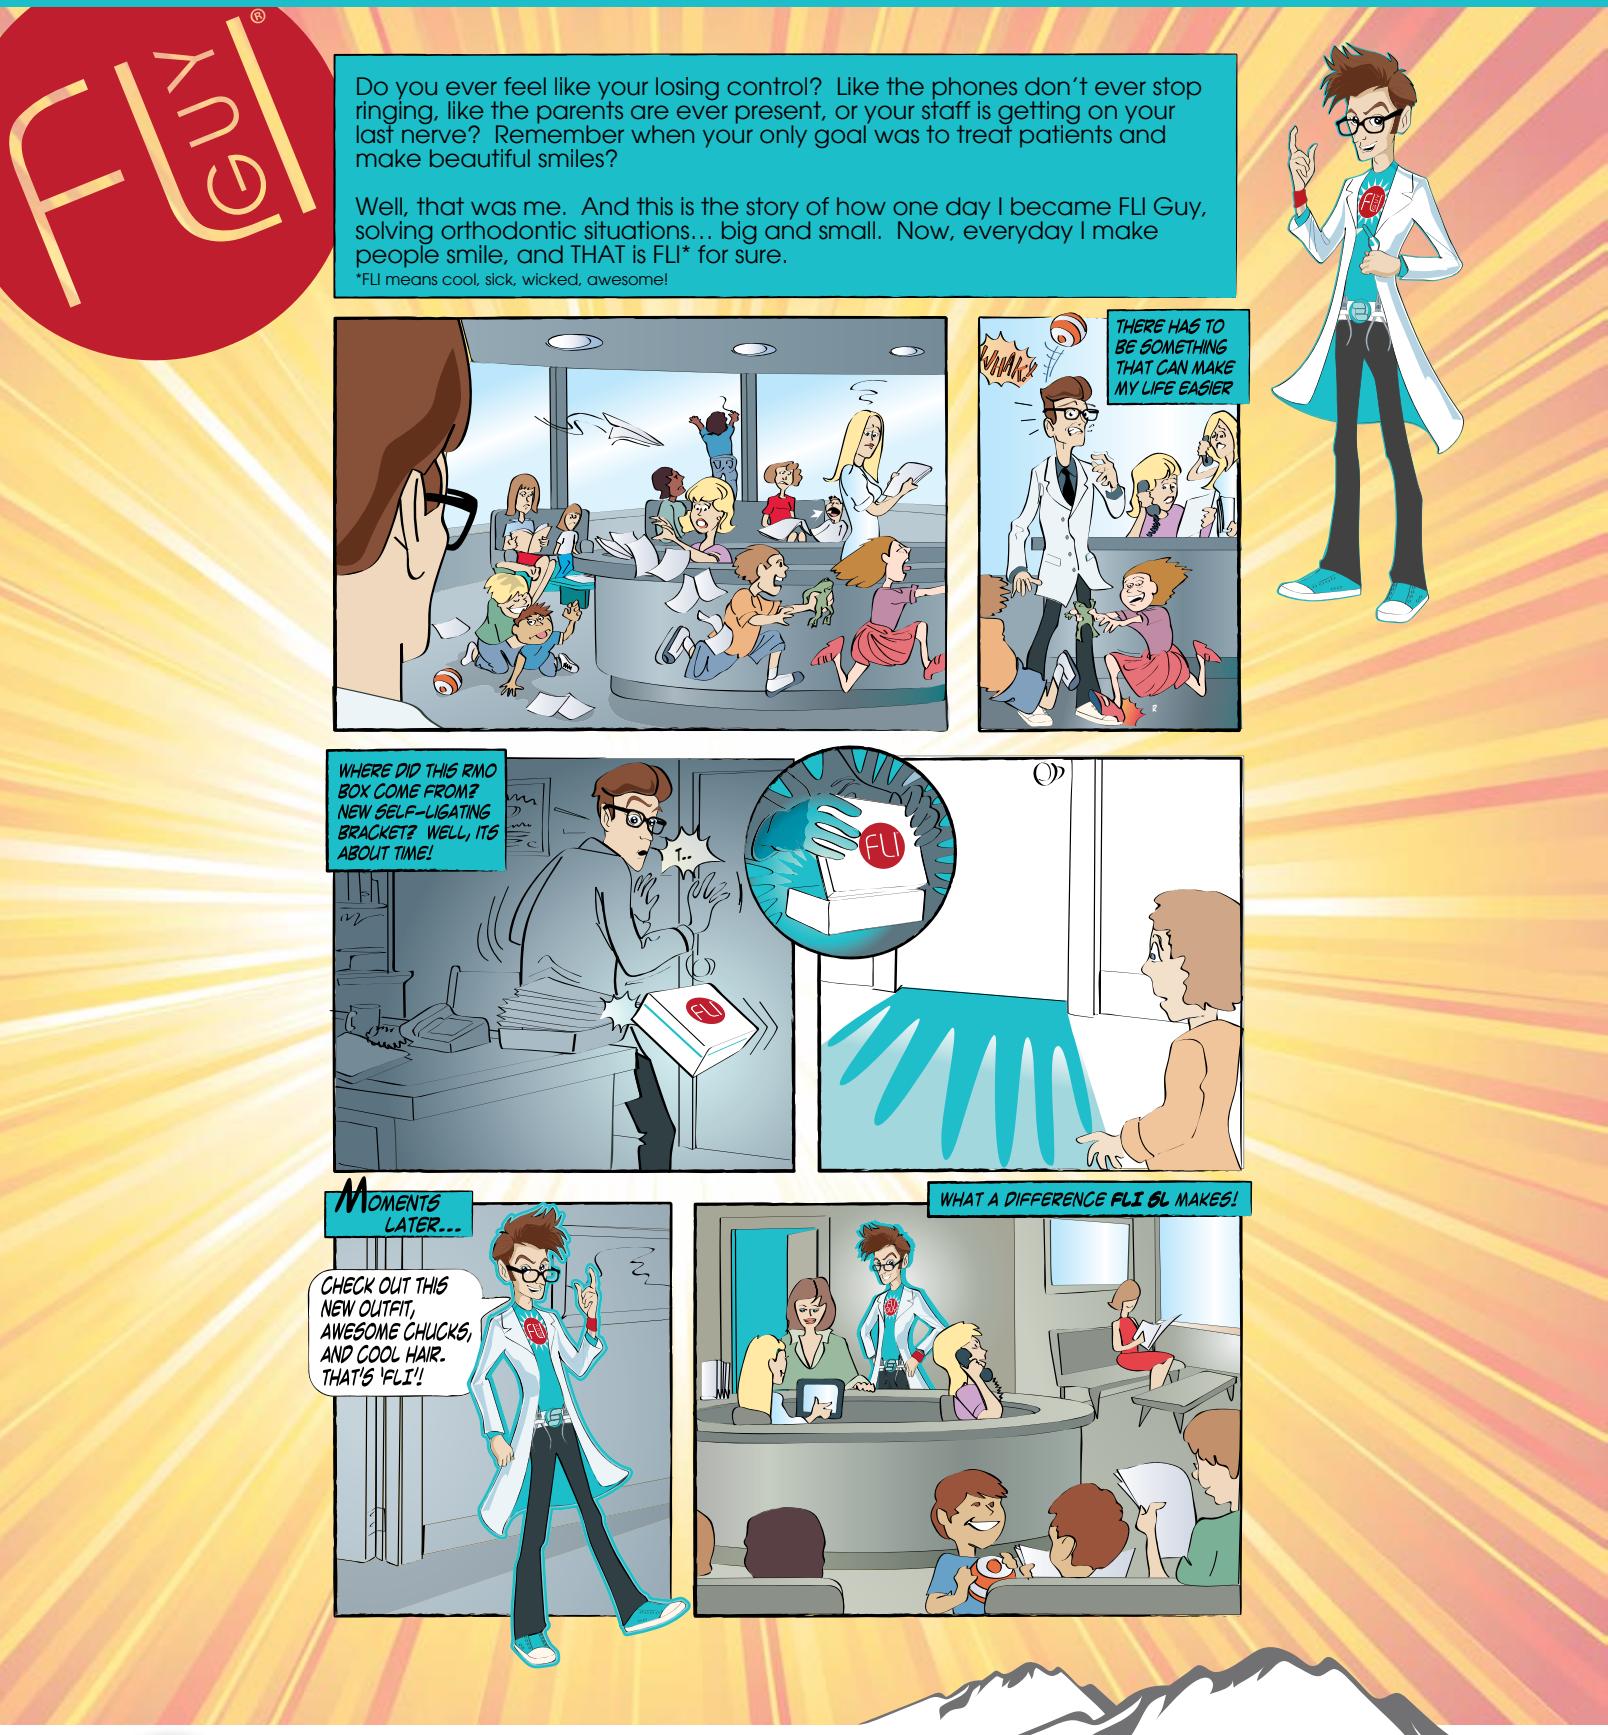

DIRECT BONDING BASES

RMO® offers a large variety of choices for bonding brackets or tubes on a base in all techniques. The number of offerings of brackets or tubes on anatomically shaped bases is significantly increased. Brackets and tubes are attached to the base using state of the art laser welding technology, and at times conventional gold/silver brazing. These bases are RMO®'s Contur Lok. This section describes the availability of brackets and tubes on bases in the column label "On Bases."

Contur Lok bases come in multiple sizes, including anatomical sizes with developmental grooves. The bonding base is a laminate of stainless steel foil to an 80 x 80 mesh. Both mesial-distal and occlusal-gingival contouring of the base assure maximum contact area for bonding. The mesh is oriented at 45°, which enhances its locking action.

- Contur Lok bases provide optimum coverage of the tooth over the entire "footprint" of the bracket or tube.
- Contur Lok bases have compound curvature to fit mesial-distal and occlusal-gingival morphology of the tooth surface.
- Contur Lok bases cover the tooth area under bracket wings, which can be food-traps, and protect them from plaque build-up.
- Contur Lok provides a 45° orientation of the mesh resulting in more mesh openings on the base and increased tooth retention. Greater mechanical retention of adhesive to the base occurs due to the larger number of mesh openings.
- Contur Lok is laser welded or brazed to brackets or tubes which maintains the mesh intact, unlike resistance welding which destroys a portion of the mesh.
- Contur Lok bases have a center indicator mark for fast, accurate bracket or tube positioning.

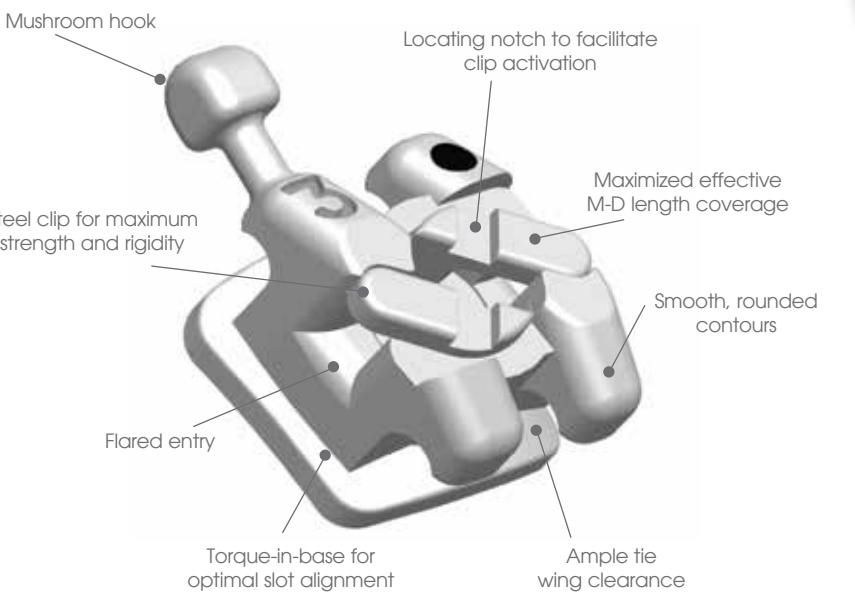

RMO®
rocky mountain orthodontics

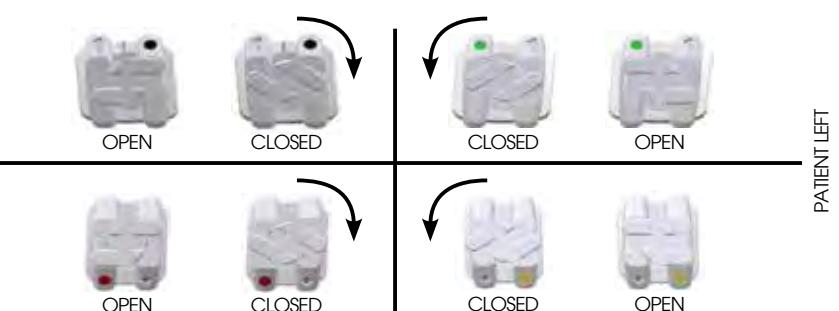

FLI® SL-Self Ligating

RMO®'s FLI SL Brackets bring innovative design to low-friction, passive self-ligation technology. The unique rotational clip design simplifies wire changes with no doors or hinges to improve clinical efficiency and minimize chair time. FLI SL provides optimum control of light forces for healthy

tooth movement with the treatment flexibility of a true twin design. Trusted strength in construction is combined with a smooth, rounded profile and beveled tie wings to offer maximize patient comfort.

FLI® Twin

RMO®'s FLI Twin Brackets offer unwavering high quality in a true conventional bracket design. Smooth, rounded contours assure both gentle aesthetics and enhanced patient comfort. The FLI Twin bracket system features a color quadrant

identification system and tooth specific pads to improve bonding efficiency. New chamfered facial lead-ins and a flared entry support quick and easy wire changes.

FLI® TWIN DESIGN

RICKETTS® ORIGINAL BIOPROGRESSIVE® SYSTEM

RMO®'s Featured Metal Brackets

SWLF SYNERGY R®

Friction Selection Control®

- Independent research confirms reduced treatment time
- Enhanced design - use with or without colored ligatures
- Faster and more precise results compared to other self ligating systems

SYNERGY®

Friction Selection Control®

- Small, smooth, comfortable
- Bracket design results in reduced treatment time
- Choose your favorite color ligatures

FLI TWIN BRACKET

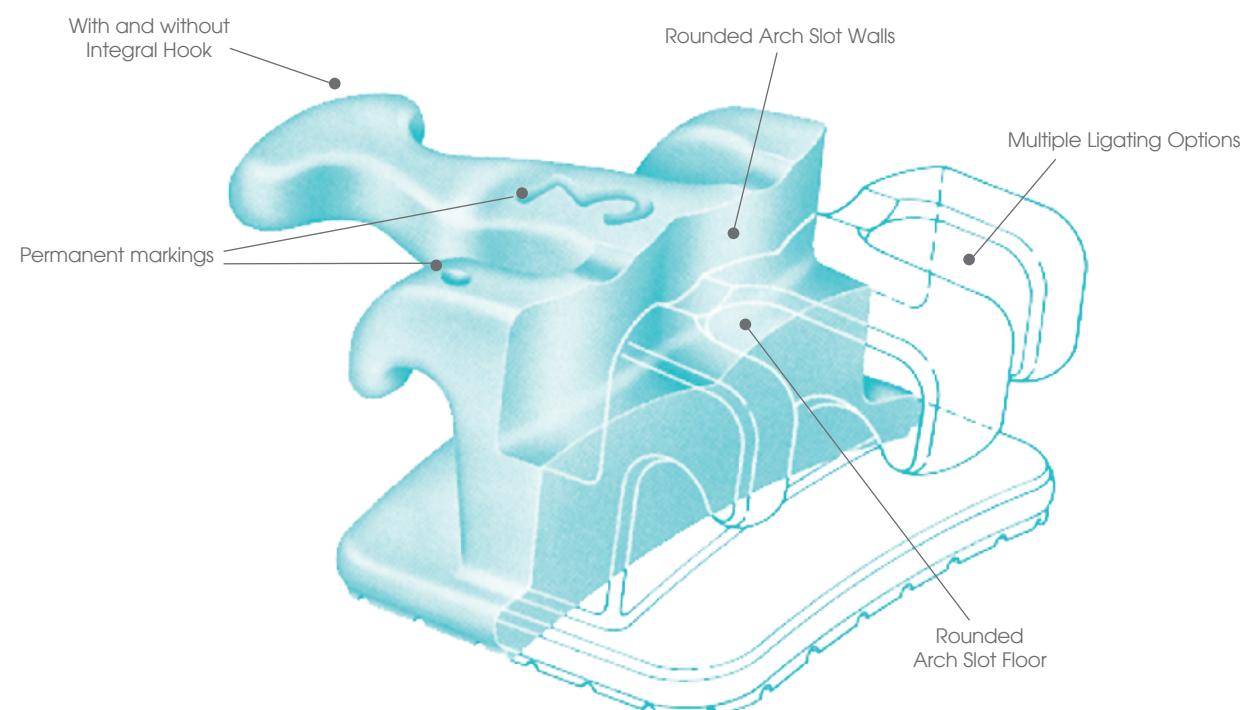

- Smooth, comfortable low-profile design
- Liberal tie-wing clearance for easy and secure ligation
- Mushroom style hook for added comfort
- Facial and mesial/distal lead-ins for easy wire placement and insertion
- Treatment flexibility with true twin design
- Torque-in-base allows for optimal slot alignment
- Center Scribe provided for accurate placement
- Reliable two-piece construction
- Color quadrant coding for easy identification

Synergy®

The **Synergy®** bracket design is the most versatile, active bracket ever. It brings you more treatment control options than conventional edge-wise brackets. It reduces friction dramatically and total treatment duration. All of this comes together in a very low profile patented Synergy design.

- **Synergy's** rounded arch slot walls reduce binding and friction, giving a gentler, more continuous force. Treatment time is faster and is comfortable to the patient.
- **Synergy's** rounded arch slot floor reduces friction since the arch will contact the floor at only two points.
- **Synergy's** round arch slot walls and floors allow tangential contact of the arch wire, thus avoiding sharp binding as the arch wire enters or exits through slot. It also increases the effective inter-bracket distance.
- The **Synergy** bracket design offers ligation options never available before (available through RMO® only).
- Minimum friction ligation
- Conventional ligation

Synergy® R

RMO®'s SWLF® (Straight Wire Low Friction) Synergy R® bracket represents the latest development in ConverTechnology: passive when you want it, total control when you need it. No clips, no doors, and no failures. SWLF Synergy R combines the simplicity and ease of self-ligating bracket design with the flexibility and advanced performance of Synergy's Friction Selection Control (FSC) modes. SWLF Synergy R provides minimal friction and rapid wire changeout, with cuspid and bicuspids that can be converted into traditional Synergy style brackets at any time during treatment. Clinically tested and proven effective, SWLF Synergy R is designed, engineered, and manufactured with pride in the USA.

Features and benefits include:

- Cuspid and bicupid brackets feature an integrated convertible cap
- Can reduce treatment time and increase time between appointments
- No moving parts—no broken clips, doors, or slides
- Large flared lead-ins reduce kinking and binding
- Low profile—comfortable for your patient
- Convert to a standard Synergy style bracket at any time for advanced FSC modes
- Consistent cap conversion strength—no undesired conversions
- Rounded underwing clearance promotes easy ligation when converted
- Permanent ID markings with vertical placement line for accurate positioning
- Metal-Injection-Molding (MIM) for consistent tolerances and smooth corners

Synergy fx®

A fully functional bracket

Several years ago, the first-generation Synergy® opened eyes to new possibilities in orthodontic treatment efficiency around the world. With generation two, Synergy fx® brings a new standard of treatment efficiency. Synergy fx continues this tradition by allowing light and consistent forces that can be exerted over long periods of time.

Low friction-low force

Patented rounded arch slot walls and floor, let the arch wires reach their full potential by minimizing frictional opposition to sliding during the alignment stage. This adds to the effectiveness of the arch wire and contributes to the combined effect of Synergy.

More than meets the eye

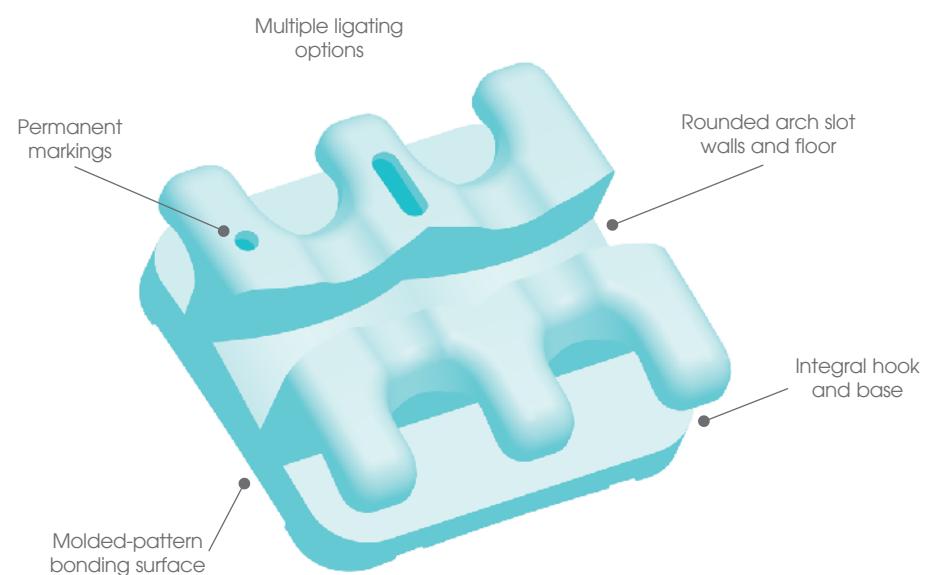

Synergy fx is totally integrated as one unit with built in wings, hooks and base. The integral bonding base eliminates bracket from base separation. Synergy fx has six identical size tie wings for easy ligation, strength and patient comfort. The lower central/lateral brackets are also in the Synergy six tie wings. This assures the quickest possible movement by all the teeth to immediately engage in movement.

More comfort

Synergy fx low friction, light forces along with its low, rounded profile means more comfort. Low profile has less irritation to soft tissue and less interference with the upper teeth.

Available in these techniques:

- Straight Wire Low Force (SWLF®)
- RMO's Version of Roth® Straight Wire System

SYNERGY FX® DESIGN RMO®
STRAIGHT WIRE LOW FRICTION (SWLF®)

**YOUR PATIENTS WILL BE
YOUR #1 FAN WITH FLI® CSL...
A BRACKET THAT COMBINES BOTH
AESTHETIC AND FUNCTION.**

RMO[®]
rocky mountain orthodontics

RMO® Mini-Taurus, is a minimum bracket with maximum advantages.

Mini-Taurus offers enhanced bracket quality with smooth, rounded contours and rounded hooks. These features assure patient comfort, hygiene and structural strength.

The incisal-gingival bracket dimension has been dramatically reduced. The twin bracket tie wings are of sufficient size to allow easy ligating of single wing or across both wings. Strength in design prevents collapse or breakage from mastication. Bracket design minimizes interference between upper and lower arches. The mesial-distal width permits precise rotation and tipping control.

Foil mesh bases match each bracket and tooth individually. This allows for the smallest

Metal injection molded—
Advanced sintered technology
ensures high quality uniform
exacting profiles

Built-in anti-rotation where applicable.

Torque, angulation and in/out is built into the base

Arch slot is parallel
with the occlusal
plane

The diagram illustrates a dental orthodontic bracket system. It features a central vertical stem with a rounded top and a base contour at the bottom. Attached to the stem are two horizontal rectangular brackets, one on each side. The bracket on the left has a circular slot in its center. The bracket on the right has a rectangular slot. Four small black squares point to specific features: one points to the rounded top of the stem, another points to the slot in the left bracket, a third points to the slot in the right bracket, and a fourth points to the base contour of the stem. Below the diagram, the text 'Alignment System' is centered, with a line pointing down to the base contour. At the bottom left, the text reads: 'Bracket and base center scribe align precisely with the long axis of the clinical crown'. To the right of the diagram, three descriptive paragraphs are aligned vertically, each preceded by a line pointing to a specific feature.

Short, rounded hooks at no extra charge

Permanent identification system. Each bracket has a permanent identifier and ink mark

Base contours—designed for each tooth type

Alignment System

Bracket and base center scribe align precisely with the long axis of the clinical crown

VERSA T® –
THE MOST VERSATILE TWIN BRACKET APPLIANCE

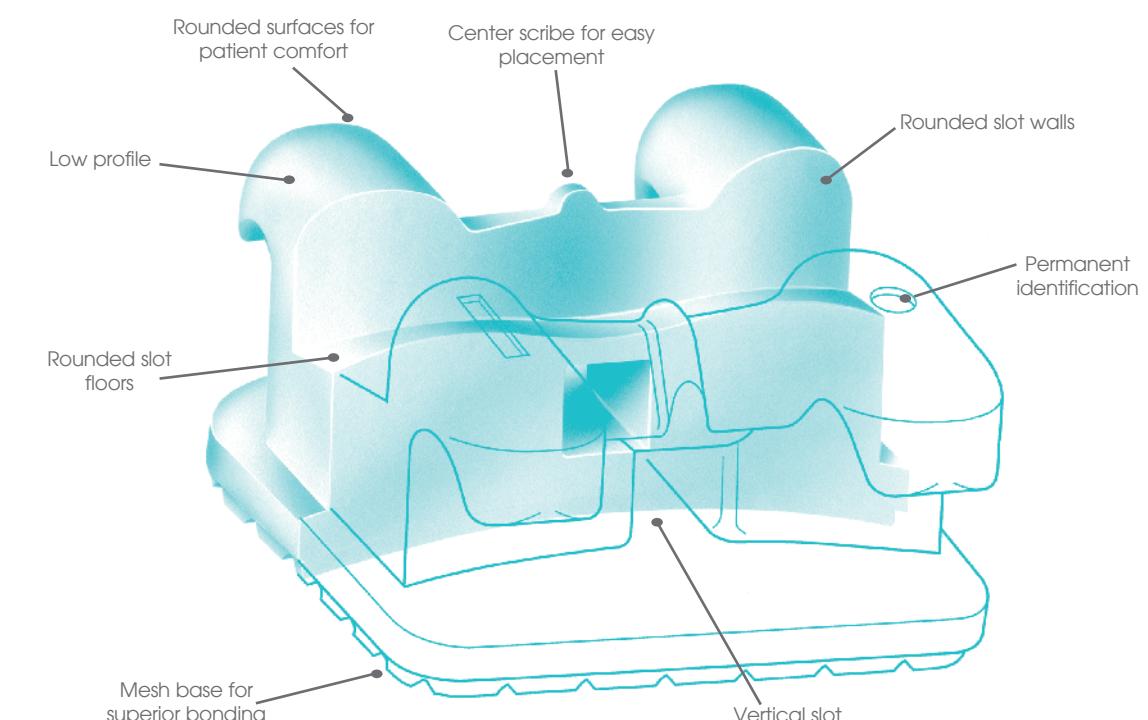

Versa T®

RMO®'s bracket incorporates the friction reducing features of Synergy® but in the Mini-Taurus® twin design. Additionally, it includes a vertical slot for auxiliary treatment applications while maintaining a low profile.

The Synergy bracket has become the most popular selling RMO® bracket. Many of our customers asked for the features of Synergy in a twin bracket. We listened and developed the Versa T®.

Bracket prescriptions are generic and do not accommodate the individualized treatment requirements of each patient. Versa T, by using the vertical slot, allows the clinician to adjust the tip, torque, and rotation and manage space to fit the individualized treatment plan for each patient.

Versa T has redesigned rounded arch slot walls, rounded arch slot floors and vertical slots. Rounded arch slot walls increase arch wire effectiveness dramatically by eliminating binding and friction on arch wires; now they are free to perform at their optimum.

BRACKET & TUBE SYSTEMS

Integra™

RMO®'s low profile bracket appliance system is called Integra™. This small, rhomboid designed bracket is totally integrated. The complete bracket, including the base, is molded as one unit and is manufactured using Metal Injection Molding (MIM). RMO® pioneered the MIM manufacturing process in orthodontics and is the leader in the field.

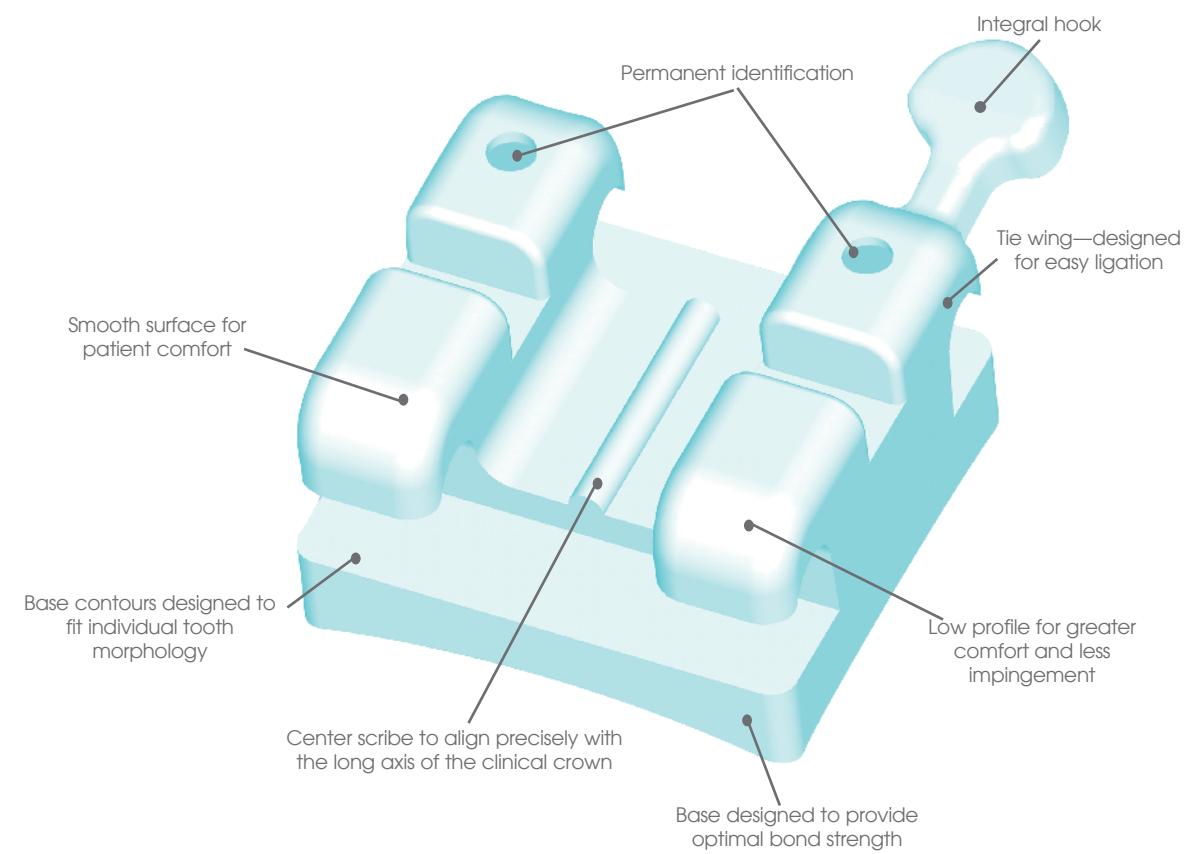

The result of molding the bracket as one unit results in a stronger integral appliance. The built-in wings, hooks and base result in precision orthodontic control. The integral ball hooks on cuspids and bicuspids allow for simultaneous use of auxiliaries.

The increased, molded-pattern bonding surface area assures an excellent bond.

The molded base is designed to match precisely to the curvature of the tooth morphology for maximum contact and strong, consistent bonding. The vertical scribe line aligns precisely with the crown long axis, simplifying accurate bracket placement.

The wing design provides for easy ligation, which is unique in a low profile bracket. Integra has a permanent marking system molded into each bracket for easy identification.

The Integra bracket delivers an unbeatable combination of superior function, patient comfort and superb bonding in an integral appliance system. Quality and consistent finishing are the results.

FLI® CSL- Ceramic Self-Ligating

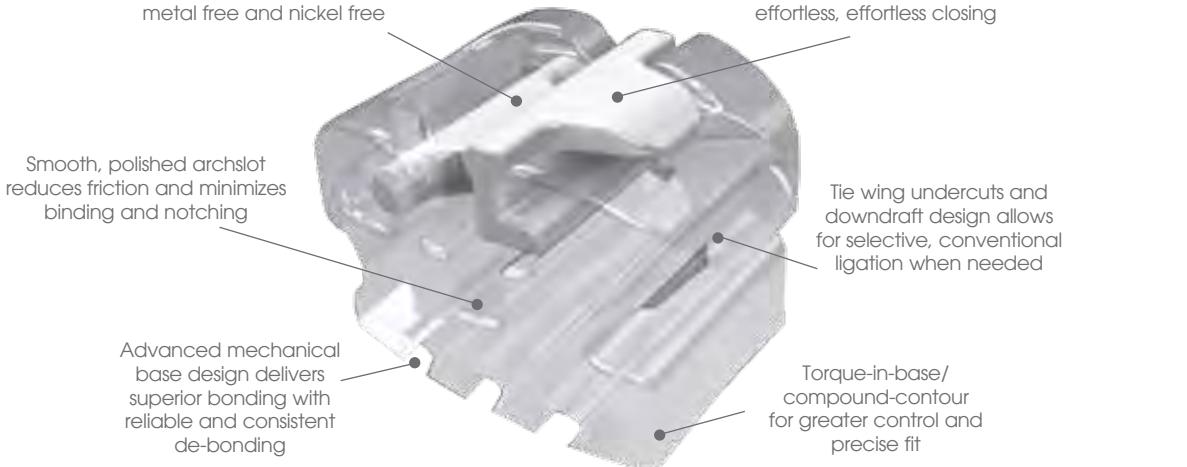

RMO®'s FLI® CSL Brackets are passive self-ligating brackets that deliver superior performance and convenience together with unmatched aesthetics into one remarkable appliance system. FLI CSL's ceramic construction provides a 100% nickel-free solution with reliable strength and durability. The

high strength polymer clip offers aesthetic appeal without compromising strength or performance to support quick wire changes and reduced chairtime.

High quality, stain resistant polymer clip provides unmatched aesthetics - 100% metal free and nickel free

Enhanced patented clip design delivers maximum rotational control and effortless, effortless closing

TO OPEN

1 SLIDE CLIP TOWARD HINGE

2 ROTATE CLIP OPEN

TO CLOSE

1 ROTATE CLIP CLOSED

2 SLIDE FORWARD UNTIL CLIP ENGAGES INTO LOCKED POSITION - AUDIBLE CLICK OFTEN OCCURS WHEN CLIP ENGAGES INTO LOCKED POSITION

Signature III

Self-confidence for you and your patients

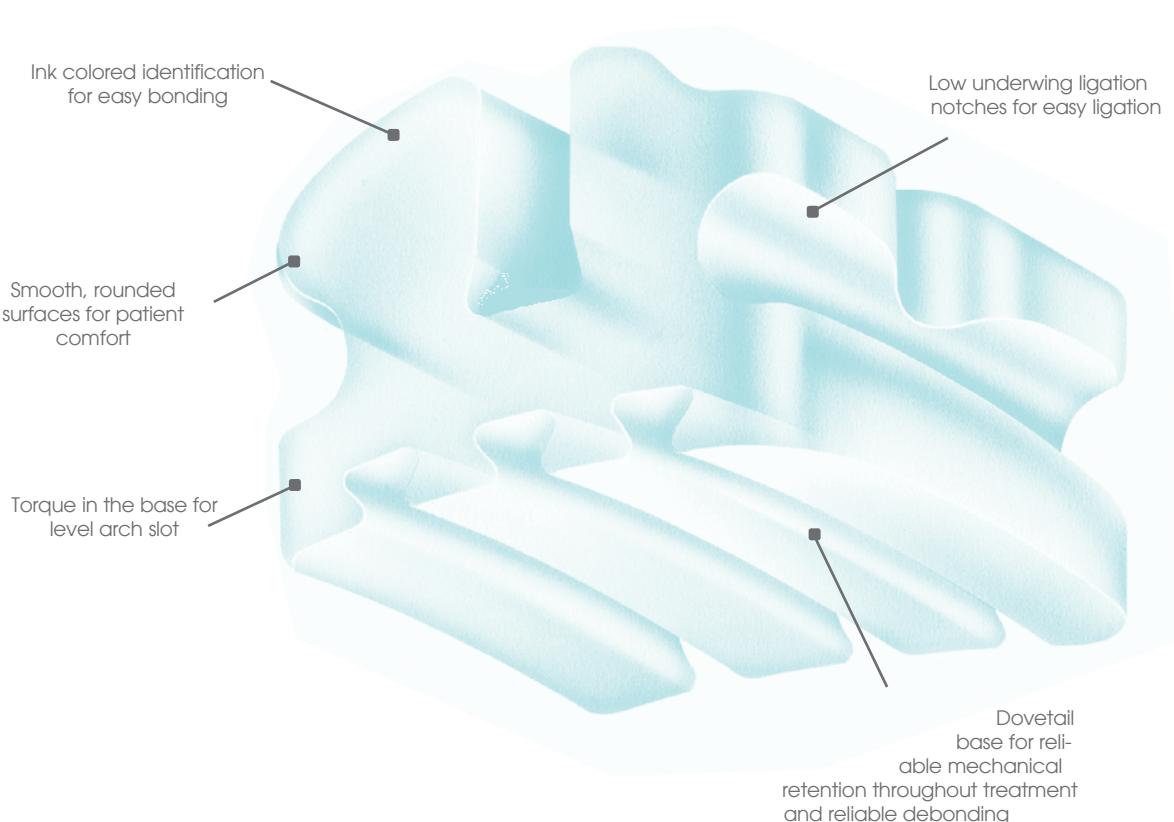

The **Signature III** ceramic brackets perform as good as they look, almost invisible.

Ceramic is strong, translucent, and it doesn't absorb moisture, or weaken or discolor.

Ceramic has smooth, rounded edges to prevent arch wire binding and cutting of elastomeric.

Dovetail base

Easy bonding and debonding. Signature III's base has a patented dovetail design that enhances bond strength while allowing it to debond easily. Each base matches various tooth shapes. This gives the adhesive a large surface area—free of air pockets, so a sturdy, mechanical bond can form. This winning combination gives the ability to use all chemical and light cure bonding systems.

LUXI® II

Ceramic brackets with the functionality of metal brackets

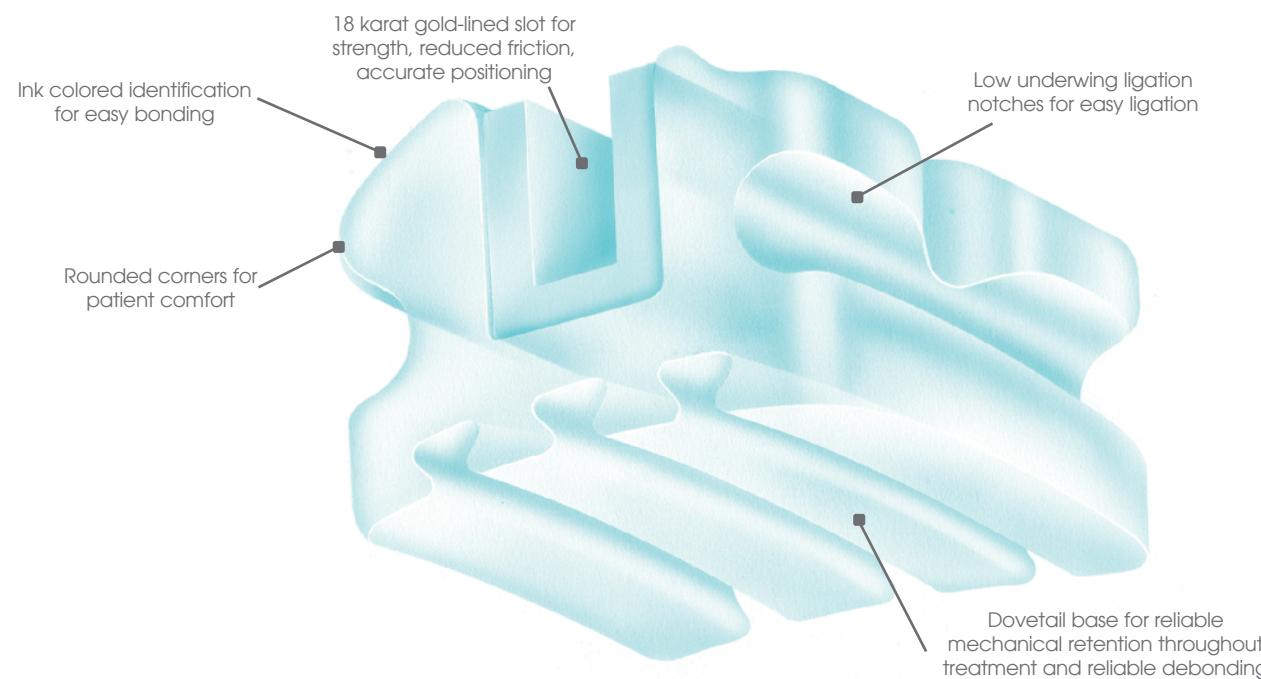

These brackets give your patients the look they want and give you the functionality you need. LUXI II® gives you reduced friction for enhanced sliding mechanics and reduced treatment time, easy debonding, the aesthetics of ceramics, and the strength of metal all in one bracket.

Reduced friction

LUXI II is a reduced-friction ceramic bracket containing a biocompatible gold arch slot insert. This patented feature enhances sliding mechanics by reducing friction as compared to conventional ceramics.

Mechanical features

- The LUXI II ceramic bracket is produced from extruded alumina. It is not a machined bracket. It will not fail prematurely from cracking due to internal stress.
- LUXI II contains an 18-karat (75%) gold insert, which is similar in composition to high-quality gold crown and bridge alloys.

Synergy LUX®

The new gold standard in ceramic brackets

What do you get when you combine the revolutionary functionality of the Synergy bracket and aesthetic quality of the LUXI II® bracket? You get a bracket that functions as beautifully as it looks.

Low-friction/Low-force

Synergy LUX® is a reduced-friction ceramic bracket with a patented 18-karat gold arch slot. This feature effectively reduces friction as compared to conventional stainless steel and ceramic brackets.

A ceramic offering unprecedented quality

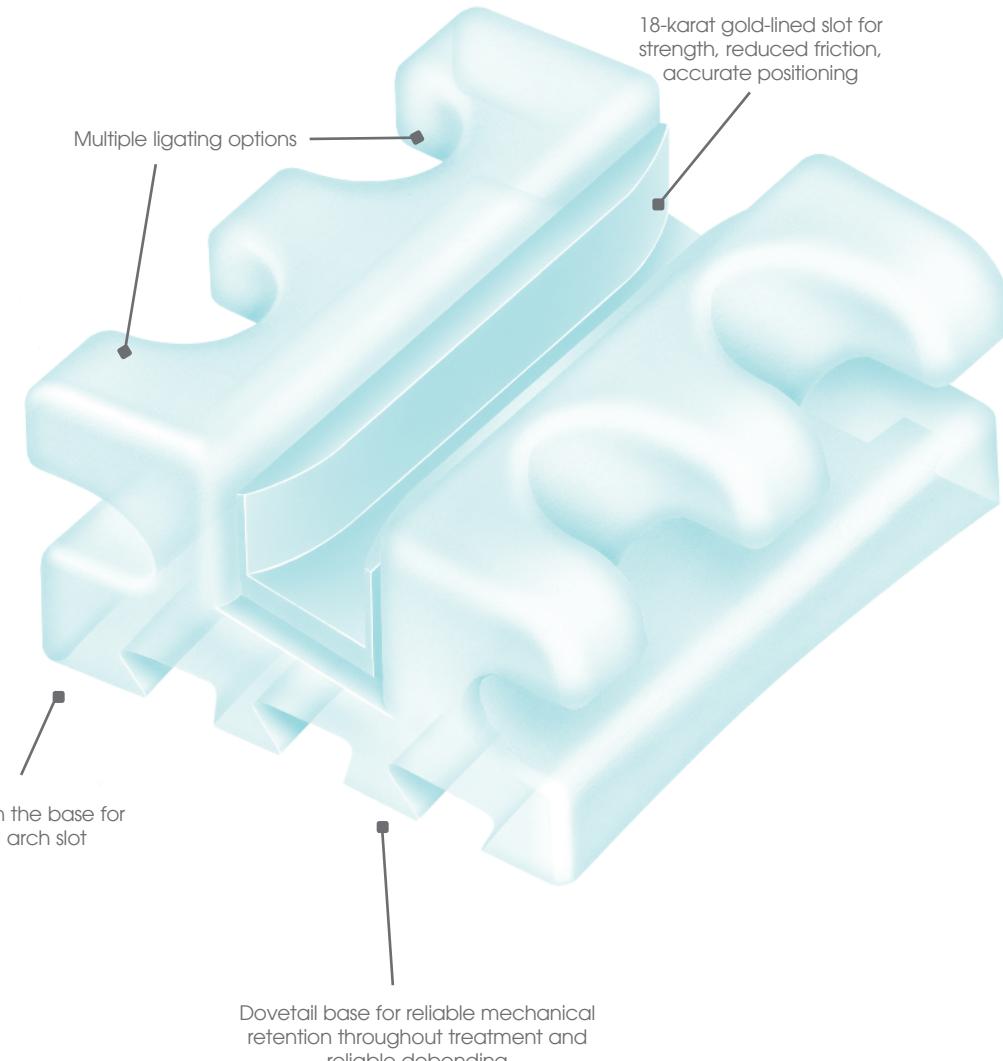

Synergy LUX allows the free movement of wire during alignment just like self-ligating brackets. Synergy's family of brackets are the only brackets that allow tooth-by-tooth selected friction control over the entire course of treatment.

Multiple ligating

With all six tie wings in the same plane, this design allows for easy ligation, greater strength and increased patient comfort. The six tie wings also permit multiple ligating from zero-friction on the arch wire to maximum friction in full figure-eight ligation.

Available in this technique:

- Straight Wire Low Friction (SWLF®)

I-TTR LINGUAL SYSTEM

i-TTR Lingual System

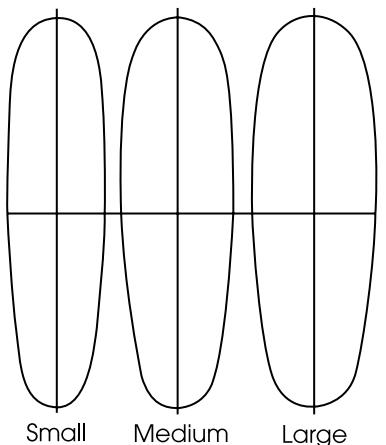

The intelligent lingual treatment with Torque, Tip and Rotation (i-TTR) control. The bracket presents two slots for round arches and a rectangular central slot for auxiliary insert. The three slots permit a progressive modular control of all tooth movement. A universal bracket for all teeth, including molars.

Lingual Archwire Upper

i-TTR Lingual System – Small Arch Introductory Kit

- Bracket cases
- Small arches: MX/MN, .012, .014, .016

K00700 5 kits/180 brackets
6 pks/60 wires

i-TTR Lingual System – Medium Arch Introductory Kit

- Bracket cases
- Medium arches: MX/MN, .012, .014, .016

K00701 5 kits/180 brackets
6 pks/60 wires

i-TTR Lingual System – Large Arch Introductory Kit

- Bracket cases
- Large arches: MX/MN, .012, .014, .016

K00702 5 kits/180 brackets
6 pks/60 wires

i-TTR Instruments

- Utility Tweezer
- Wire Director

T00700 1

Kit, 3x3 6 max/6 man	K002502	72 pads, 4 wires, no instrument
Kit, 4x4 6 max/6 man	K00253	96 pads, 4 wires, 1 instrument

Multiple Case Dispenser

- Multiple case dispenser; 2 through 100 set-ups
- Printed with Palmer notation for quick reference to individual brackets and tubes
- Designed to work with RMO standard dispensing systems

Bracket Tray and Lid	J00774	1
----------------------	--------	---

Single Case Organizers	J00099	25
------------------------	--------	----

Patient Relief Wax

- Wax is used for relief from application irritation
- Each box contains 50 individual wax boxes for patients.
- Three Box color options: Red, White, and a Sparkle Multi Pack (Orange, Pink, Blue, and Green)

Sparkle Multi Pack	J00550	50/box
--------------------	--------	--------

bracket&tubesystems

DIRECT BOND LINGUAL BUTTONS, HOOKS, EYELET

bands

**Direct Bond Lingual Button**

- Stainless steel
- Round-base design
- With minimum protrusion, can be used from any direction for easy engagement of elastics
- Ultra-smooth finish

Order Number	Package Contains
--------------	------------------

On Bases

Molar	A07901	10
Central/Lateral	A07902	10
Cuspid/Bicuspid (medium bonding base)	A07903	10
Cuspid/Bicuspid (wide bonding base)	A07905	10
Cuspid/Bicuspid (narrow medium bonding base)	A07906	10

**Direct Bond Molded Plastic Lingual Button**

A03902 10

**Direct Bond Lingual Cleat**

- Stainless steel
- Low profile
- Easily adjustable

A00407 10

**Direct Bond Lug/Cleat (Debnam)**

- Mesial-distal elastic hook
- Hook is bent out from base surface to engage elastics

On Bases

Cuspid/Bicuspid	A07910	10
Molar	A07911	10

**Direct Bond Eyelet**

- Accepts wire and small diameter elastic ligatures

On Bases

Molar	A07913	10
Central/Lateral	A07914	10
Cuspid/Bicuspid	A07915	10

LINGUAL TUBES

Order Number	Package Contains
--------------	------------------

Wilson® 3D® Tube

Designed to accept Lingual 3D FIXED/REMOVABLE™ Modular Orthodontics® (Wilson®) appliances.

Tube without hook	A04315	10
Tube with gingival hook	A04314	10

**Gaston-type single vertical lingual tube**

- For .036 Ellis prefabricated lingual arches

Tube	A00178	10
------	--------	----

**Ellis-type lingual tube with locking knob**

- For .036 Ellis prefabricated lingual arches

A00173	10
--------	----

**Lingual tube for hand formed lingual arches**

- For "D-shape" precious metal soldered posts (RMO® does not stock lingual posts)

Tube	A00190	10
------	--------	----

**Solderable lingual post**

- Use only with the lingual tubes A00173 and A00178

.036 lingual arch wire	A00236	10
------------------------	--------	----

**Horizontal Lingual Sheath**

.036 wire	A00148	10
-----------	--------	----

**Horizontal Lingual Tube**

- With distal retention notch

For .036 wire	A00149	10
---------------	--------	----

**Horizontal Lingual Tube**

- With occlusal welding flange

For .036 wire	A00186	10

RMO®'s Dual-Top Temporary Anchorage Device (TAD) system provides efficient and flexible biomechanics. Dual-Top TADs significantly enhance treatment capabilities and can be extremely effective in reducing treatment time, surgeries, and extractions. Appliances can be inserted chairside by the doctor and loaded immediately. Experience the latest generation of appliances—RMO's Dual-Top TADs

- FDA approved
- Self-drilling and self-tapping
- No pilot hole, tissue punch, incision or flap necessary
- 100% biocompatible - titanium alloy
- Chairside insertion/removal
- Low profile - comfortable for patient
- Eliminate patient compliance issues

Dual-Top TAD System Kit

- The Dual-Top system includes a well-organized storage block, which allows for repeated sterilization
- The Dual-Top system includes 14 of the most commonly used types and sizes of TADs
- The storage block has a layout for easy storage and TAD identification, with the thread diameters and TAD lengths etched into the block

Dual-Top TAD System Kit	Order Number	Package Contains
Kit components include:		
Button Driver Shaft (for Hand Driver Body)	G00110	1 each
Bracket Driver Shaft (for Hand Driver Body)	G00310	1 each
TAD System Storage Block	G00230-1	1 each
Hand Driver Body	G00232	1 each
Button Top TAD - Diameter 1.4mm x Length 6mm	G00111	1 each
Button Top TAD - Diameter 1.4mm x Length 8mm	G00112	2 each
Button Top TAD - Diameter 1.6mm x Length 6mm	G00113	4 each
Button Top TAD - Diameter 1.6mm x Length 8mm	G00114	2 each
Button Top TAD - Diameter 2.0mm x Length 8mm	G00117	1 each
Bracket Top TAD - Diameter 1.6mm x Length 6mm	G00313	2 each
Bracket Top TAD - Diameter 1.6mm x Length 8mm	G00314	2 each

Dual-Top Temporary Anchor Devices (TADs)

- Manufactured with surgical grade titanium alloy
- Self-drilling and self-tapping, with sharp fluted tips
- Reverse buttress thread design
- Smooth upper transmucosal shaft

Button Top TAD

- Small upper button
- Easy to attach Energy Chain™ or NiTi Coil Springs
- Secure retention of attachments
- Low profile-patient comfort
- Oversized collar resists gingival overgrowth

Diameter x Length	Order Number	Package Contains
1.4mm x 6mm (.056" x .236")	G00111	2 each
1.4mm x 8mm (.056" x .315")	G00112	2 each
1.6mm x 6mm (.063" x .236")	G00113	2 each
1.6mm x 8mm (.063" x .315")	G00114	2 each

Through its revolutionary one-hand control system, user can easily approach the most difficult implanting area of maxillary and mandible jaw bone:

- Designed to be used for inserting and removing Dual-Top TADs
- Designed to be detachable for easy sterilization
- Easy implant at Maxillary and Mandibular jawbone area
- Enable user to control driver with only one-hand

	Order Number	Package Contains
Orthonia Torque Driver	G00235	1 each
Orthonia is a high-performing, battery-powered torque driver used for placing Temporary Anchorage Devices. It helps mitigate TAD failures during insertion procedures.		
<ul style="list-style-type: none"> • Reverse Rotation Function effective for proper and safe removal of TADs • 2 Speed Levels- Low -15 RPM and High - 20 RPM • Convenient and easy to set up-user friendly designed LCD and push button control panel • Torque limit settings- 5 torque limit levels ranging from 10N-cm to 30N-cm • Safety feature engages when torque limit is exceeded • Rechargeable Driver 		
		
Driver Adapter for Straight Shaft (included)	G00236	1 each
<ul style="list-style-type: none"> • Accurate rotation axis, no wobbling during insertion, high success rate for implant retention • RPM control promotes stable insertion • Used with RMO product codes G00110, G00210, G00310 		
		
Driver Adapter for Contra-Angle (included in kit and sold separately)	G00234	1 each
<ul style="list-style-type: none"> • Easy access to difficult to reach areas such as: palate, retromolar pad • Adapter rotates to accommodate various angles of insertion • Used with RMO product codes G00100, G00200, G00300 		
		
Torque Limiting Driver	G00234	1 each
<ul style="list-style-type: none"> • Prevent over torque • Easy control • Convenience and simple setup torque value • Safe implant placement • Torque range: 6N.cm until 30N.cm • Head separation for convenient washing • Compatible with existing instrument 		
		
TAD NiTi Coil Springs with Eyelets		
<ul style="list-style-type: none"> • Stainless steel eyelets are attached to each end of the closed NiTi coil spring to easily engage various appliances • Wire diameter of .010" and inside coil diameter of .030"

DUAL-TOP TEMPORARY ANCHORAGE DEVICES (TADS)
ACCESSORIES – CRIMPABLE HOOKS/PLIERS

Maxillary Distalizing Arches - for use with TADs

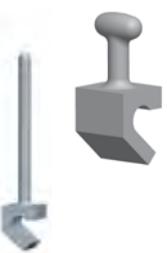

- The Wilson® 3D® Maxillary Bimetric Distalizing Arch has been modified for use with TADs
- Energy Chain™, ligature wire, or coil spring connects the TAD with the gingival hook on the appliance
- Customized Distalizing Arches can be fabricated using components of the Wilson 3D Bimetric Arch (A04127-A04129, A04150-A04154) and the Omega Adjustable Stop (A04124)

Size	Order Number	Package Contains	Kit Contains

NEW SELF-ETCHING ADHESIVE SYSTEMS

tableofcontents

- RMbond® Indirect Bonding System
- MonoLok™2 Self-Etching Light/Dual Cure
- RMO® Band Cement
- FLI® Ceramic Adhesive
- MonoLok™2 One-Step Light Activated and Primer Activated bonding Systems
- Etching Gel/Kit Refills
- Curing Light

adhesives

RMO® offers two main options for bonding adhesives, Indirect bonding/Direct bonding.

RMbond® - Indirect Bonding System

In this system, the doctor bonds the brackets and tubes to a working model of the patient. A transfer tray is made and stored until the doctor is ready to bond the brackets. When the patient arrives for his/her visit it takes approximately 5 minutes for the entire bonding process to be completed. It is very precise in the bracket placement and saves time. This type of bonding is becoming more popular, particularly in high volume practices where efficiency is very important. RMO® offers both one-step primer activated and light cure adhesive systems in many configurations.

MonoLok™ 2 - Direct Bonding System

Using this system, the doctor bonds the brackets and tubes directly to the patient. RMO® has excellent product offerings for both types of bonding procedures.

MonoLok™2 Self-Etching Light Cure

MonoLok2 Self-Etching Light Cure is a self-etching primer solution. It eliminates one step in the bonding procedure, thereby reducing chair time. An enamel etchant and primer act together to prepare the enamel surface for application of an adhesive. No rinsing is needed. The dispensing system is extremely easy to use; just penetrate the foil cover with a supplied microbrush, vigorously apply the liquid to the enamel surface, remove the volatile components of the liquid with a stream of air, place bracket with light-cure adhesive onto the prepared enamel surface, then light cure. It is compatible with all light-cure adhesives.

MonoLok™2 Self-Etching Dual Cure

MonoLok2 Self-Etching Dual Cure is delivered as a two component capsule, separated by foil, that is easy to penetrate with a supplied microbrush, mix and dispense. The mixed solution is a self-etching primer solution. It eliminates one step in the bonding procedure, thereby reducing chair time. An enamel etchant and primer act together to prepare the enamel surface for application of an adhesive. No rinsing is needed. It is a dual cure system; curing occurs as a chemical reaction and/or with the blue range of visible light. After MonoLok2 Primer Activated adhesive and primer are activated, by applying the components onto the bracket base, setting starts. Before the material is entirely set, the mixed adhesive is placed on the prepared enamel surface. Setting is completed as part of a reaction between the adhesive and the dual cure self-etching primer.

RMO® Band Cement

RMO® Band Cement is a uniquely formulated, thin film resin that has a very low solubility in oral fluids and will not breakdown during use. Cement breakdown and dissolution are an issue with other types of materials used as a band cement. RMO® Band Cement is light-cured material, allowing a long working time, if needed. Its blue color assures it being visible during band removal & clean-up.

FLI® LC Ceramic Adhesive

FLI LC Ceramic Adhesive is formulated to optimize the properties needed by ceramic brackets. It is tooth colored for excellent color match to RMO® ceramic brackets. Its low solubility in oral fluids assures that it does not disintegrate during use. Its bond strength is more than adequate for clinical retention of ceramic brackets, but not so high that it would be difficult to debond. It is available in easy to use, disposable syringes.

Etching Gel System

This etching gel system ensures uniform etching of the tooth and rinses off readily, non-staining. The gel is a green color, to ensure precise placement on the tooth. Disposable tips provide more protection against cross-contamination.

adhesives

MonoLok™2 Self-Etching Light Cure Overview

- One-step etchant and bonding resin in one solution
- Time saving: eliminates one step in bonding procedure
- Convenient, easy to use dispensing system
- Economical and fast bonding/re-bonding of brackets
- Compatible with all light-cure adhesives

Order Number	Package Contains
K00211	1 Kit

- Kit includes:
- 0.1 ml single dose units
 - Micro brush tips
 - Brush holder

1

MonoLok™2 Self-Etching Dual Cure Overview

- Unique, easy-to-use dispensing system
- Two components of mixture are separated by foil that is easy to penetrate with a supplied microbrush
- Easy to mix
- One-step etchant and bonding resin in mixed solution to prepare tooth surface
- Time saving, to prepare tooth surface
- Dual cure: chemical reaction and/or visible light

Order Number	Package Contains
K00210	1 Kit

- Kit includes:
- 2 x 0.1 ml Single Mix units
 - Micro brushes

FlashMax P3 Light Pen

- Highest output intensity of LED curing lights: 4,000-6,000 mW/cm², with a peak wavelength of 460 ± 20 nm.
- A battery-operated, cordless hand unit that provides maximum office flexibility and convenience
- Three curing modes for enhanced bonding versatility and operating efficiency
- Slim ergonomic design offers optimal access to posterior regions of the mouth
- Adjustable tips deliver consistent, uniform beam over wide range of surfaces and working distances
- Bilateral identical control buttons

wire

Wires are a key component of any fixed appliance treatment. Recent metallurgic advances have created many options for today's orthodontists. RMO® is proud to have the most complete wire selection available in the market.

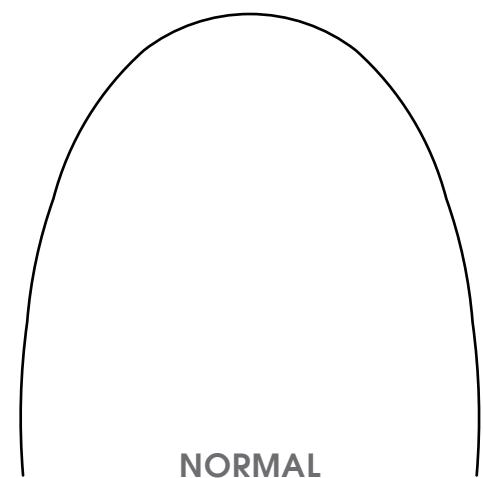

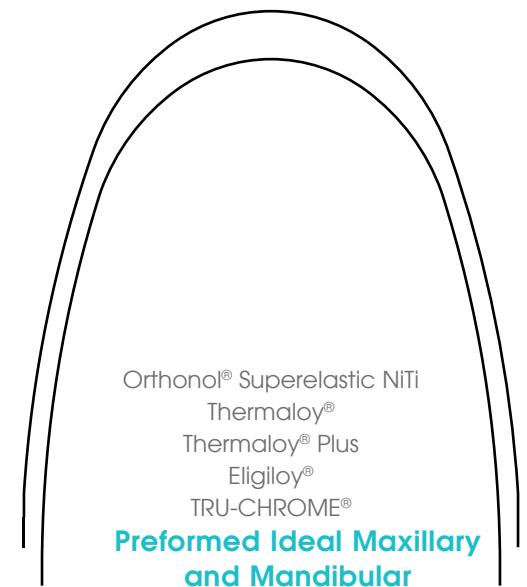

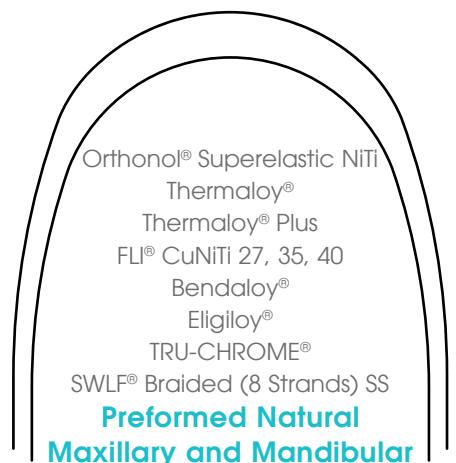

Key characteristics of wire to consider are: strength, stiffness (or its inverse – springiness), range, resilience and formability. Each wire has a unique set of properties, and the orthodontist selects the best option for their patient and treatment philosophy.

Some of our key wire categories are:

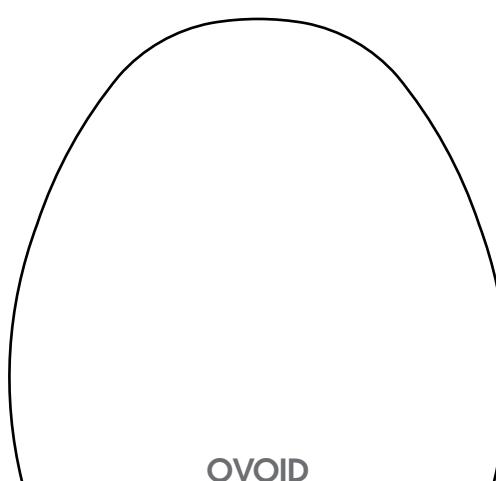

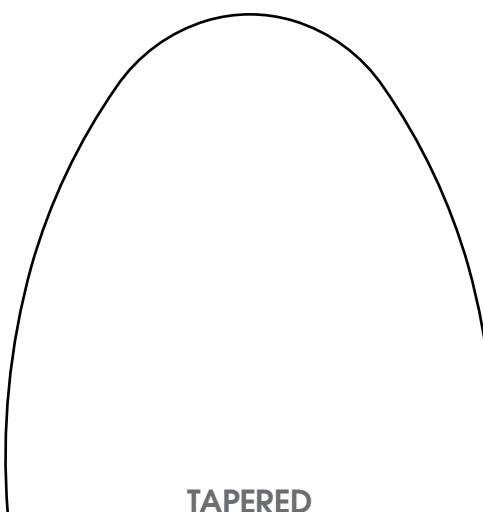

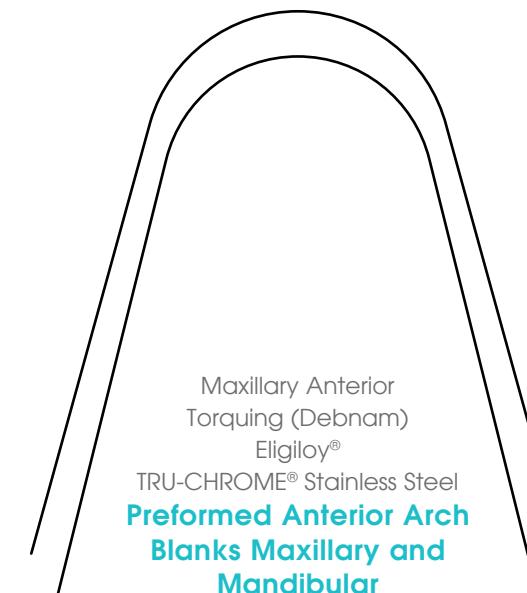

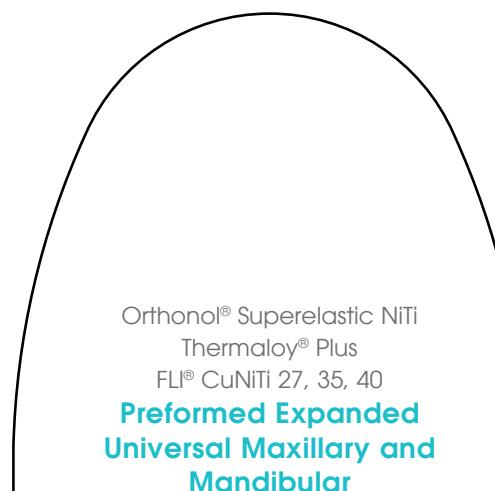

Nickel Titanium	Elgiloy® - Chromium Cobalt
Orthonal® – super elastic	Blue
Thermaloy® Plus – Thermal activated wire	Yellow
Thermaloy® – a true thermal activated wire – very light force	Green
	Red
FLI® Wires	Stainless Steel – Tru CHROME®
Copper Nickel-Titanium	Solid
Aesthetic/coated wires	Braided
Titanium Molybdenum	Flex-VIII™
Bendaloy® (Nickel-free)	Twisted
	Supra Flex™
	Tri Flex

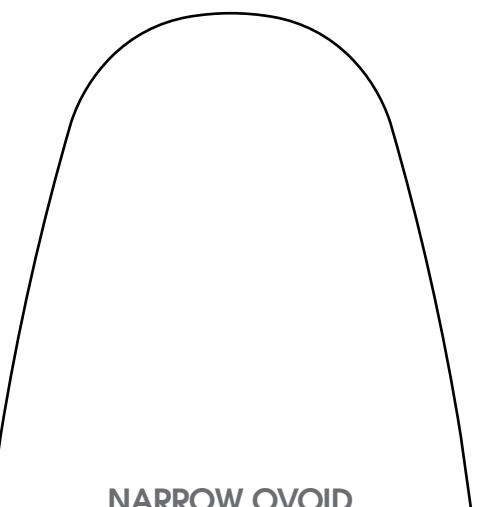

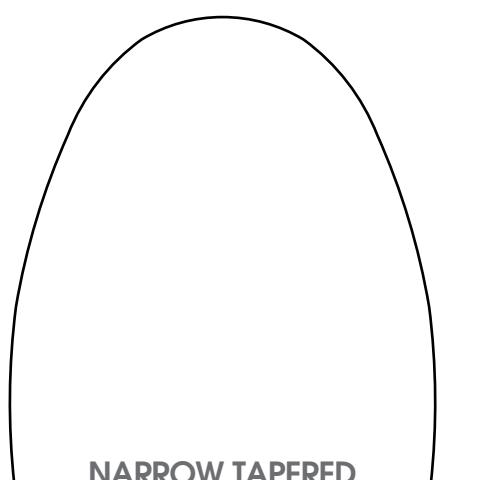

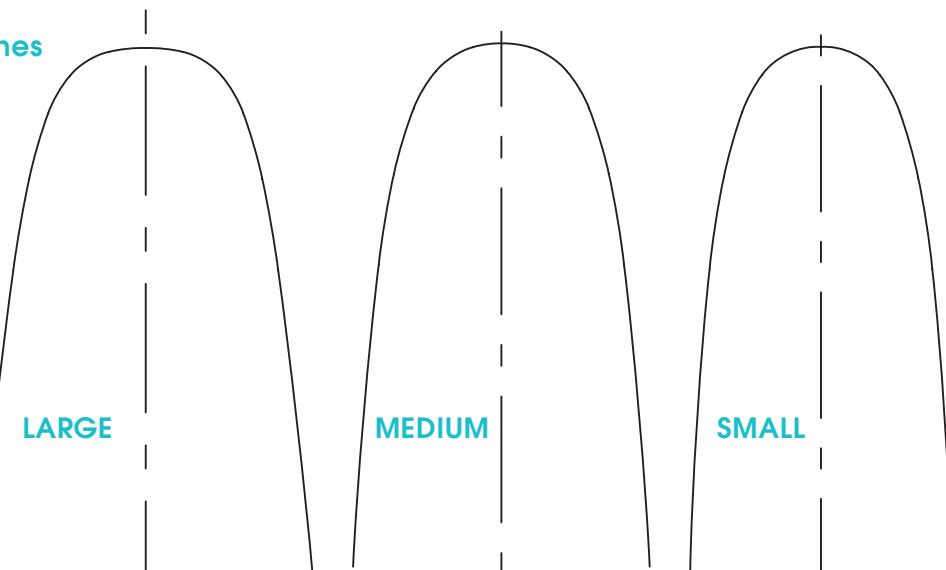

wire forms 1 to 1

Preformed Penta-Morphic®
NiTi (Orthonol® Dimpled)
Elgiloy® (Yellow Heat Treated)
S.S. (TRU-CHROME®)

Preformed Lingual Arches

NICKEL-TITANIUM PREFORMED ARCHES/ STRAIGHT LENGTHS

NiT

NiT wires were introduced as orthodontic wires due to their unique properties of shape memory and maintaining a constant force over a range of wire deflections to move teeth. RMO® offers many options for wires having low, medium, and high tooth-moving forces. The wire lines were designed with Thermaloy having the lowest forces with a true heat-activation characteristic in the mouth. Thermaloy Plus delivers medium forces, while still offering the feel of a thermal-activated wire. Orthonal delivers high forces and has super elastic properties. Orthonal has been used to offer additional arch forms in the Ricketts Penta-morphic shapes.

Orthonal® Superelastic Nickel-Titanium Preformed Natural Arches and Straight Lengths

- Nickel-titanium alloys are shape memory alloys
- Orthonal is superelastic nickel-titanium in preformed natural arch shapes
- Provides an ideal continuous gentle force at a constant, uninterrupted force level for tooth movement
- Reduces chair time by extending time between visits
- Permanent midline etchmarks: Three lines for a maxillary arch, one line for a mandibular arch
- Bulk and convenient single wire packaging ten wires to a box
- PurePak® protects against airborne contaminants and cross contamination, is not intended for autoclave or any other methods of sterilization

Wires have been designed and manufactured in a logical and consistent way. In each wire line, a larger wire delivers a greater force. Among wire lines, for the same size wire (for example, .016" round or .017" x .025" rectangular), Thermaloy delivers the lowest force; Thermaloy Plus delivers a moderate force; and Orthonal delivers the largest force. This gives the doctor a large number of options in selecting the type and size wire that is right for his/her practice.

Penta-Morphic® Arches (Ricketts®)

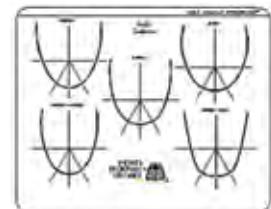

- Finishing arches for post-treatment provide long-term stability
- Five arch forms: normal, tapered, ovoid, narrow tapered and narrow ovoid
- Tooth size, facial type, and other morphological considerations have been built into the five forms
- Distal length for individualized bends or continuation to second molar
- Maxillary or mandibular
- Orthonol (nickel-titanium) "dimpled" midline

Penta-Morphic® Arch Selector

8" x 10" Vinylite

Orthonol® Reverse Vector Arches

- Increases efficiency in closing anterior open bites and correcting excessive overbites
- Employs curve of spee to eliminate the need for step downs, step ups and other varieties of activating loops to correct overbites
- Leveling by extrusion (relative intrusion) can now be accomplished by one continuous reverse vector
- Minimizes molar rotation
- Controls incisor torque
- Permanent midline etchmarks: three lines for maxillary, one line for mandibular arch

NICKEL-TITANIUM PREFORMED ARCHES

NICKEL-TITANIUM PREFORMED ARCHES

Thermaloy® (Thermal Activated Nickel-Titanium) Plus

- Some thermal properties at room temperature; superelastic in the mouth
- For clinicians who want a higher force in a small round wire than a true thermal activated wire
- Forces intermediate between Thermaloy and Orthonol
- Easier insertion than a superelastic wire
- Forces delivered to teeth that compare to other intermediate force brands
- Bulk and convenient single wire packaging ten wires to a box
- PurePak protects against airborne contaminants and cross contamination, is not intended for autoclave or any other methods of sterilization
- Permanent midline etchmarks: three lines for maxillary arch, one line for mandibular arch

Thermaloy® (Thermal Activated Nickel-Titanium)**Preformed Natural and Ideal Arches**

- Pliable at room temperature and superelastic at body temperature
- Can be used as an initial arch wire for treatment
- Same elastic working range as superelastic with lower forces
- Can be used earlier in treatment to provide tongue control
- Easier to ligate in severely maligned cases and impacted canines
- Increases patient comfort
- Permanent midline etchmarks: three lines for a maxillary arch, one line for a mandibular arch
- Bulk and convenient single wire packaging ten wires to a box
- PurePak protects against airborne contaminants and cross contamination, is not intended for autoclave or any other methods of sterilization

FLI® Copper Nickel-Titanium Wire Overview

FLI Copper Nickel-Titanium is the newest addition to RMO®'s extensive line of archwires providing flexible treatment options with a wide selection of forces and wire sizes. The addition of copper to nickel-titanium alloy enhances the thermal properties of the wire while maintaining precise control of forces. Enhanced resistance to permanent deformation and smooth progression of transformation temperatures yielding an expected feel in hand makes FLI Copper Nickel-Titanium the ideal treatment solution for any office. Materials: Copper Nickel-Titanium, 49.1% Ni, 44.5% Ti, 6% Cu, Balance Cr (nominal composition). Transformation Temperatures: 27°C Highest Force Levels, 35°C Medium Force Levels, 40°C Lower Force Levels.

WILSON® 3D®

The 3D® 1st Phase FIXED/REMOVABLE® Wilson® system comprises a series of interrelated fixed/removable intraoral modules that simplify and improve treatment. Wilson® 3D® appliances can be used to supplement all techniques while delivering practical and simple solutions to both typical and extraordinary movement challenges. RMO® sponsors numerous CE events that teach the skills needed to incorporate Wilson® 3D® concepts and materials into your present technique. Please call RMO® or visit our website for additional information about the legendary Wilson® 3D® system.

- Time tested and proven
- Over 100 different movements possible, including: expansion, contraction, distalization, space maintenance, bilateral, and unilateral
- Does not replace your current technique – the Wilson® system simply complements your current system
- First phase, early treatment, mixed dentition, and adults
- Preconfigured sizes to fit all patient dental ranges
- Fixed for the patient and easily removable by the clinician for rapid chairside adjustments

rocky mountain orthodontics

FLI® AESTHETIC PREFORMED COATED ARCHES

FLI® Wire Orthonol® Superelastic Nickel-Titanium Preformed Natural Aesthetic Coated Arch Wires

- Natural appearance that will last until your next wire change
- Maintains expected wire properties and performance characteristics of the wire
- Coating on labial surface only
- Nickel-titanium alloys are shape memory alloys
- Orthonol is superelastic nickel-titanium in preformed natural arch shapes
- Provides an ideal continuous gentle force at a constant, uninterrupted force level for tooth movement
- Reduces chair time by extending time between visits

Bendaloy® Titanium - Molybdenum-Based Alloy Preformed Natural Arches

- Bendaloy is a nickel-free material that is ideally suited for patients with high sensitivity or reactions to nickel content
- Large springback provides better control over tooth movement
- Minimizes adjustment intervals
- With less stiffness than stainless steel, it allows wires to fill the bracket for control with lighter forces
- Is formable and capable of being formed into complicated configurations without fracture
- Permanent midline etchmarks: three lines for a maxillary arch, one line for a mandibular arch
- Bendaloy Round is ideal for alignment, rotations, retractions and finishing
- Bendaloy Rectangle is ideal for torquing, rotations, retractions and finishing

Bendaloy® Titanium - Molybdenum-Based Alloy, Straight Lengths, 14" (35.56cm)

- Bendaloy is a nickel-free material that is ideally suited for patients with high sensitivity or reactions to nickel content
- High springback and more resilient than stainless steel
- Low stiffness which produces light, continuous forces
- High formability which allows extensive bending and wire forming without fracture
- Springback of this wire makes it excellent for sectional arches, auxiliaries and detailing arch wires
- Bendaloy Straight Lengths are ideal for alignment, rotations, retractions and finishing
- Bendaloy Rectangular/Square Lengths are ideal for torquing, rotations, retractions and finishing

.010	x .030	(.254 x .762)	15mm	G00303	10

**TAD Coil Springs with Oval End**

- Stainless steel eyelet attached to one end and an oval end attached to the other end
- The pear-shaped opening allows for easy insertion over the Button Top TAD
- Wire diameter of .010" and inside coil diameter of .030"
- Variable (adjustable) coil spring

Length	Order Number	Package Contains
8mm	G00305	10
10mm	G00306	10
12mm	G00307	10

TRU-CHROME®

TRU-CHROME® Development

Wire has been basic to orthodontics since its beginning. By serving as holding, anchoring and spring elements, the orthodontist is able to stimulate tooth movement predictably and precisely.

In developing specialty wires for modern orthodontics, several considerations are involved:

- Semantic problem of matching requirements and terminology of orthodontics with engineering terms and tests.
- Selecting the best alloys, tempers, sizes, etc.
- Engineering procedures and quality controls for accuracy and dependability.
- Refinement of time-saving instruments, equipment and handling techniques to assure best results.

In the selection here, you will find the most complete choice of controlled quality wire for all techniques.

The success of chrome alloy stainless steel in orthodontics lies in the keen combination of delicacy and strength. It possesses, to an unusual degree, those three requisites of an orthodontic metal—hardness, elastic limit and tensile strength.

TRU-CHROME® Stainless Steel Wire

TRU-CHROME stainless steel wire is a stable, consistent, predictable performance wire, offered in four tempers. Quality controls are the tightest of any stainless steel wire in the industry.

Resilient Arch Wire Temper

Resilient arch wire temper is available in preformed arch blanks and is used in some special wire forms, depending on the suitability for the desired usage. Straight lengths are provided for those who prefer forming their own arch wires.

Retainer Wire or No. 2 Temper

Retainer wire or No. 2 temper stainless steel wire has a softer temper than arch wire temper, which enables the operator to more easily form the wire into retainer appliances. Forming the wire work-hardens it and provides a working resiliency for retainer appliances.

Clasp Wire Temper

Clasp wire is a stainless steel wire between the resilient arch wire temper and the retainer wire temper. It is soft enough to be instrument-formed to the clasp configuration and, in forming, gains sufficient hardening from pliering to have a satisfactory spring resiliency for clasps.

Ligature Wire Temper

Ligature Wire is a stainless steel wire of "dead-soft" temper that allows ligating and tying to be done with minimal work-hardening of the wire.

Penta-Morphic® Arches (Ricketts®)

- Developed by Dr. Robert Ricketts
- Finishing arches for post-treatment provide long-term stability
- Five arch forms: normal, tapered, ovoid, narrow tapered and narrow ovoid
- Tooth size, facial type and other morphological considerations have been built into the five forms
- Distal length for individualized bends or continuation to second molar
- Permanent midline etchmark on universal maxillary/mandibular
- TRU-CHROME stainless steel

WIRE

TRU-CHROME® STAINLESS STEEL WIRE IN STRAIGHT LENGTHS

**TRU-CHROME® Stainless Steel Retainer Wire ● Round,****14" (35.56cm) Lengths, No. 2 Temper**

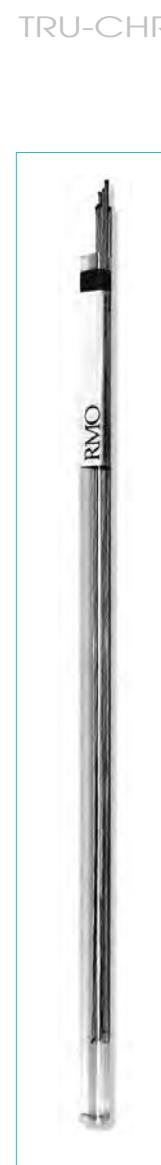

- Retainer Wire, No. 2 Temper is softer than arch wire, which enables the operator to more easily form the wire into retainer appliances
- Forming of the wire work-hardens the wire and provides a working resiliency for those types of appliances

Inch	Size (mm)	Order Number	Package Contains
.028	(0.711)	E00080	10
.030	(0.762)	E00081	10
.032	(0.813)	E00082	10

.040	(1.016)	E00084	6

TRU-CHROME® Stainless Steel Retainer Clasp Wire ● Round,**12" (30cm) Lengths, Clasp Wire Temper**

- Clasp Wire Temper is between the resilient arch wire and the retainer wire
- It is soft enough to be instrument formed to the clasp configuration
- Forming gains sufficient hardening for the pliering to have satisfactory spring resiliency for clasp

Inch	Size (mm)	Gauge	Round	Half Round	Package Contains

TRU-CHROME® STAINLESS STEEL WIRE, TWISTED AND BRAIDED STRAIGHT LENGTHS/PREFORMED ARCHES

Twisted Bondable Lingual Retainer Wire- Dead Soft

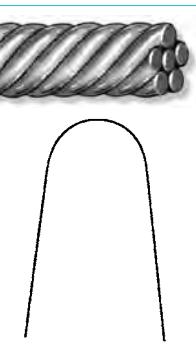

- 7 strand twisted 5" (12.7 cm)

Inch	Size (mm)	Order Number	Package Contains
.027	(0.686)	E00530	10

**TRI-FLEX Twisted Wire**

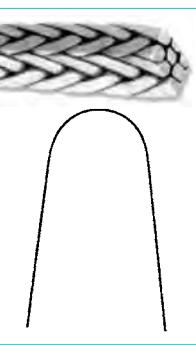

Tri-Flex (3 strands) is spring-tempered, twisted leveling wire for early treatment stages. It bends readily and can accept great deflection before its limit is reached. It provides gentle force and will not unravel or fray when cut.

Inch	Size (mm)	Order Number	Package Contains
ROUND (14" (35.56cm) STRAIGHT LENGTHS)			
.0155	(0.394)	E00175	10

Fracture Splint

Reinforced wire splint

Order Number	Package Contains
G00017	2

Elgiloy® wire is a premium, specially-fabricated wire in four tempers. Each Elgiloy wire type has separate characteristics. Wire forms made from Elgiloy can be heat-treated, depending on the desired application. It's toughness and flexibility are easily discernible with use.

Elgiloy wire is superior, as furnished, for forming, and in performance time during treatment. All tempers have the unique capability of beginning as a "softer" easily handled wire. Because Elgiloy wire can be used as is or heat-treated, it provides flexibility and control in force applications.

Elgiloy® Development

RMO® was selected to develop Elgiloy for orthodontics because of its leadership in developing new materials for the profession. This "wonder metal", developed by the Elgin National Company as the "Heart That Never Breaks" in modern precision time pieces, is not a stainless steel. It is a patented cobalt-base alloy compounded of eight materials (cobalt 40%; chromium 20%; nickel 15%; molybdenum 7%; manganese 2%; beryllium .04%; carbon .15%; and iron 15.81%).

Elgiloy® Offers Orthodontists Particular Advantages

- Superior physical properties
- Longer functioning as a resilient spring wire without distortion or fatigue
- Easy soldering without annealing
- Easy heat-treating to increase physical properties
- Simple electrolyte polishing

Maximum properties are not necessarily best for all orthodontic purposes. Full spring qualities are excellent for small diameter arch wires and coil springs, but larger wires of full spring temper are impossible to handle. It follows that the best qualities for a particular alloy form vary according to the work to be done to the material and the final usage. Recognizing this, RMO® developed a series of different types of Elgiloy wires—each fabricated for specific applications and each identified by a color marking on the end. With a wide range of carefully engineered wire types, orthodontists can take full advantage of Elgiloy's superiority and versatility, whatever their techniques.

Elgiloy® Wire Properties

- **Set resistance** – Retains power longer than stainless steel
- **Fatigue resistance** – More cycles than stainless steel without breakage
- **Greater spring efficiency** – Up to 20% more power than spring steel without an increase in dimensions
- **Corrosion resistance** – Outperforms chrome stainless steel by 17%
- **Non-magnetic** – Non-magnetic through all temperature ranges

How to Use Elgiloy®

- **Blue – Blue Elgiloy** is initially the softest of the tempers. It can be welded with low heat, and soldered without embrittling. Blue Elgiloy is recommended when the wire to be used is over .020" (0.508mm) or when the wire requires considerable bending, welding or soldering. Excellent for edgewise arches, lingual arches, retainers and removables.
- **Yellow – Yellow Elgiloy** is initially ductile and slightly harder than Blue Elgiloy. Using caution, you can spot-weld and solder to large Yellow Elgiloy wires, .021" x .025"; .030"; .036" (0.533mm x 0.635mm; 0.762mm; 0.914mm), without embrittling them. Some practitioners use Yellow as furnished, but it can be heat-treated if greater resiliency or spring performance is required. After heat-treating, Yellow Elgiloy can be adjusted slightly, but should not sharply. It is excellent for flat wire techniques. Yellow Elgiloy is recommended where greater spring qualities are needed than those provided by Blue Elgiloy.
- **Green – Green Elgiloy** is initially semi-resilient and will temper comparable to high spring-tempered steel wires. It can be shaped easily with the fingers and can be plier-manipulated before heat-treating.
- **Red – Red Elgiloy** is initially "hard" with exceptionally high spring qualities. It is not recommended for heat-treating. Use where adjustments will not be required after heat-treating.

Penta-Morphic® Arches (Ricketts®)

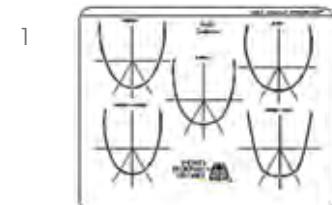

- Developed by Dr. Robert Ricketts
- Finishing arches for post-treatment provide long-term stability
- Five arch forms: normal, tapered, ovoid, narrow tapered and narrow ovoid
- Tooth size, facial type and other morphological considerations have been built into the five forms
- Distal length for individualized bends or continuation to second molar
- Permanent midline etchmark on universal maxillary/mandibular
- Yellow Elgiloy Penta-Morphic arches are heat-treated to maintain form and resiliency

ELGILOY® RETAINER FORMS

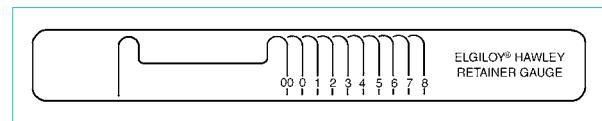

ELGILOY® WIRE IN STRAIGHT LENGTHS

Hawley Labial Retainer Forms – Unheat-treated

- Blue Elgiloy .030" (0.762mm) is easily contoured
- Can be used as is or heat-treated to greater resiliency
- "Serrated" end sections provide stability in acrylic

Recommended when the wire to be used is .030 or larger and when considerable bending or soldering is required.

SWLF® ARCH WIRES/
NATURAL ARCH FORM

Alignment: Thermal Nickel-Titanium Arch

- Preformed natural arch shape
- Thermal wire with excellent shape memory generates light, constant and prolonged forces
- Use as an initial arch wire for unscrambling and alignment is easier to ligate in severely misaligned cases
- Pliable at room temperature and superelastic at body temperature
- Permanent midline etchmarks: three lines for a maxillary arch, one line for a mandibular arch

Inch	Size (mm)	Maxillary	Mandibular	Package Contains
ROUND				
.013	(0.330)	E02000	E02001	10
.015	(0.381)	E02002	E02003	10
.017	(0.432)	E02004	E02005	10
RECTANGULAR				
.016 x .022	(0.406 x 0.559)	E02010	E02011	10
.017 x .025	(0.432 x 0.635)	E02012	E02013	10
.019 x .025	(0.483 x 0.635)	E02014		10

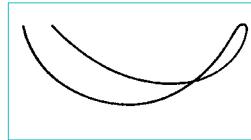

Alignment: Orthonal® Superelastic Nickel-Titanium Arch

- Preformed natural arch shape
- Provides a continuous gentle force at a constant, uninterrupted force level for tooth movement
- A high force wire for alignment for patients with severe crowding
- Permanent midline etchmarks: three lines for a maxillary arch, one line for a mandibular arch

Inch	Size (mm)	Maxillary	Mandibular	Package Contains
ROUND				
.013	(0.330)	E02060		10

Leveling: Curve of Spee Nickel-Titanium Arch

- Use to level excessive overbite or close anterior open bite
- Wire control through positioning of intermaxillary elastics: posterior for greater anterior intrusion and anterior for posterior intrusion
- Permanent midline etchmarks: three lines for a maxillary arch, one line for a mandibular arch

Inch	Size (mm)	Maxillary	Mandibular	Package Contains
.016 x .022	(0.406 x .559)		E02021	10
.017 x .025	(0.432 x .635)	E02022	E02023	10

Space Closing: Stainless Steel Arch

- Preformed natural arch shape
- Used for its ability to combine rigidity to achieve and retain torque with an excellent surface for sliding
- Permanent midline etchmarks: three lines for a maxillary arch, one line for a mandibular arch

Inch	Size (mm)	Maxillary	Mandibular	Package Contains
.016 x .022	(0.406 x .559)		E02031	10
.017 x .025	(0.432 x .635)	E02032	E02033	10
.019 x .025	(0.483 x .635)	E02034	E02035	10

Finishing: Braided Stainless Steel Arch

- Preformed natural arch shape
- Use when minor detailing is needed and torque can be maintained
- Braided stainless steel has eight strands of wire
- Permanent midline etchmarks: three lines for a maxillary arch, one line for a mandibular arch

Inch	Size (mm)	Maxillary	Mandibular	Package Contains
.017 x .025	(0.432 x .635)		E02040	10
.019 x .025	(0.483 x .635)	E02042	E02043	10

WIRE

Finishing: Beta III Titanium Arch

- No nickel content
- Preformed natural arch shape
- Use to ensure that the occlusion settles, to maintain torque, and to correct small final irregularities
- Titanium-Molybdenum-based alloy
- Permanent midline etchmarks: three lines for a maxillary arch, one line for a mandibular arch

Inch	Size (mm)	Maxillary	Mandibular	Package Contains
.017 x .025	(0.432 x .635)		E02050	10
.019 x .025	(0.483 x .635)	E02052	E02053	10

RM® Lock

- Stainless steel
- Allows placement in one piece
- For arch wire stop, tying auxiliaries, tiebacks and activating coil springs
- Offset screw assures proper locking action on all shapes of wire
- Available in two sizes

Order Number	Package Contains
--------------	------------------

Small Lock – accepts wire .012" to 0.28" (.304mm to 0.711mm)

Without hook	A00226	5
With hook	A00224	5

Large Lock – accepts wire .030" to .045" (0.762mm to 1.143mm)

Without hook	A00227	5
--------------	--------	---

Replacement Screw

For either Small or Large Lock	A00228	5
--------------------------------	--------	---

Hex Wrench for RM® Lock

Stainless steel with hard steel tip	I00034	1
-------------------------------------	--------	---

Crimpable Hooks

- Designed to be crimped on to rectangular arch wire sizes (.016 x .022, .017 x .025, and .019 x .025)
- Use to convert an arch wire into a distalization wire or a closing arch loop

Order Number	Package Contains
A00129	10
A00130	10

Crimpable Arch Wire Stop

ARCH MARKERS, RETAINER CASES,
WIRE DISPENSER/STORAGE SYSTEMS

Disposable Arch Markers

- Arch marker indicates set-backs, loops, spring position

	Order Number	Package Contains
Arch Marker Disposable	J00095	100 markers
Arch Marker with Dispenser	J00096	1 dispenser, 100 markers

Arch Marking Crayons

- Wire marking crayon indicates set-back, loops, spring positions, etc.
- Water-soluble wax
- High visibility and super adhesion

Color	Order Number	Package Contains
White	J00097	10
Red	J00098	10

Retainer Cases

- Made of high impact polypropylene, prevents breakage
- Easy-open finger holds with durable hinge and positive-click closure
- Built-in keyhole to carry on key chain or backpack
- Ventilation holes that prevent odors
- Standard size holds upper or lower retainers or a positioner
- Lab size holds bionators or special lab appliances

Color	Order Number	Package Contains

Arch Wire Dispenser System

- Dispenser unit designed to store both RMO® PurePak and standard arch wire packages for clear identification and simple storage solutions
- Dispenser can be placed on a flat surface or conveniently wall mounted for easy access.

Order Number	Package Contains
J00610	1 dispenser

RMO®'s products are made to inch specifications and are not perfectly interchangeable with products made to metric measurements. The attached tables may be used when product measurement conversions are needed. The figures have been rounded to useable form. It should be noted that when converting from measurements already expressed in millimeters (such as manufacturer's specifications) to inches, a discrepancy due to rounding may occur.

Common Fractions of an Inch and Decimals to Millimeter

Inches	Millimeters

Schweickhardt Instruments
Apex Instruments

instruments

RMO® has 2 complete lines of orthodontic instruments.

Schweickhardt

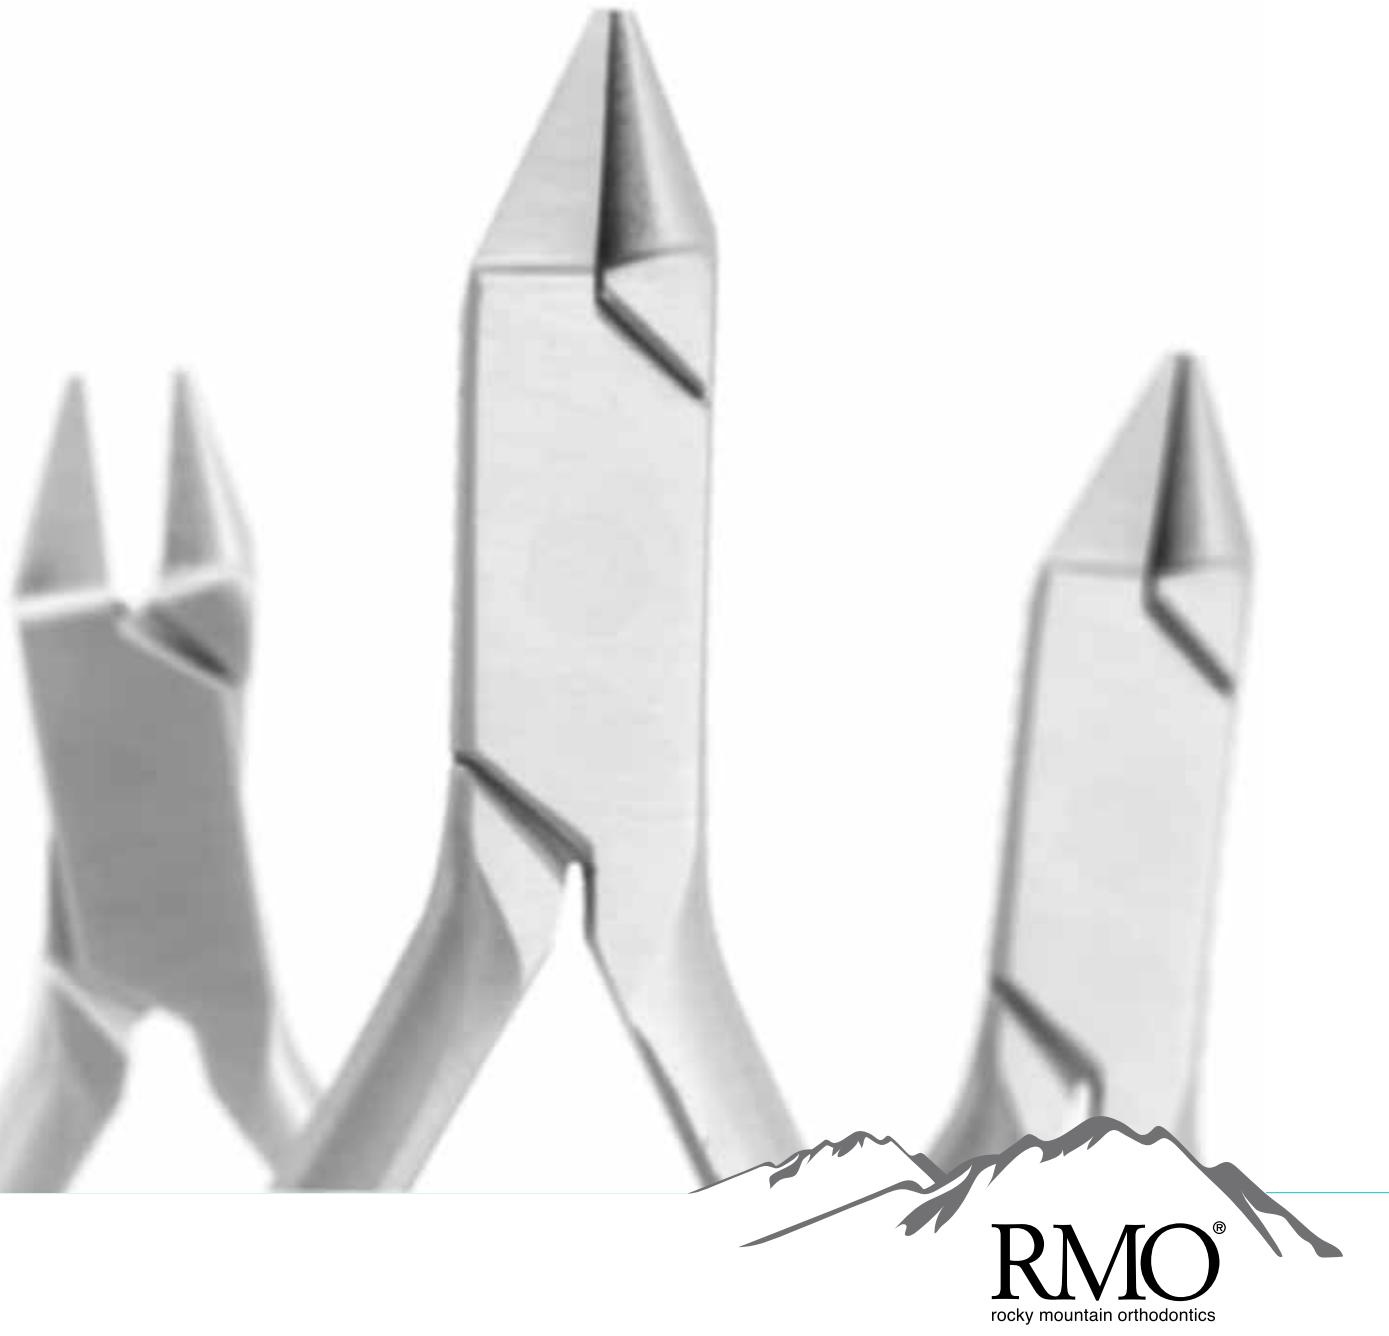

SUPERIOR QUALITY

MAXIMIZES SATISFACTION

RMO®'s premium Schweickhardt instruments represent the finest quality available at any price. Each Schweickhardt instrument is precisely manufactured to our specifications in Germany with hardened inserts that can be sharpened or replaced, resulting in a more economical product over time than disposable instruments. All Schweickhardt instruments are crafted of 100% surgical stainless steel, are forged, finished by hand, and carry a superb warranty.

Apex

This is RMO®'s value line of instruments. Apex incorporates ergonomic design, durable construction, surgical stainless steel box-jointed forgings and precise tolerances. Hardened steel inserts improve performance and extend the cutting life.

instruments

SCHWEICKHARDT INSTRUMENTS

What makes SCHWEICKHARDT instruments the better choice?

Superior quality maximizes satisfaction.

A premium quality instrument offers two unbeatable advantages for its user:

- Premium quality instruments make the daily work more satisfying. Since they allow for a more precise and ergonomic work process, they lead to better work results day to day over years and years.
- Premium quality instruments are the more economic choice:
1) Top quality instruments enable their users to achieve the same work result in less time or a better work result in the same time. 2) Premium quality instruments last longer and therefore minimize investments for replacement and repair.

A. Schweickhardt GmbH & Co. has been producing dental instruments for more than 100 years, which makes them one of the most experienced manufacturer in the world. They are one of the very few manufacturers producing its complete line from raw material to final instrument only in Germany. German craftsmanship, with its legacy of precision, produces the best quality in the world. We invest heavily to support craftsmanship with state-of-the-art, high-tech machinery. Our computerized high precision milling machines, for example, are accurate to 1/100mm.

Inserted Pliers

Especially for inserted pliers, fulfilling all of the above mentioned requirements demands great care and expertise.

Certain treatments of hard wires such as cutting and sharp bending of arch wires, specifically stress the working ends of orthodontic pliers. Therefore, these working ends need to be equipped with hard inserts to ensure perfect function and prevent them from being damaged by the wire.

RMO® Schweickhardt inserts are made from a special alloy and are applied to the plier with a highly sophisticated brazing technique.

The insert alloy combines hardness (around 62 HRc) with a high corrosion resistance. Therefore the pliers do not need to be chrome plated. Consequently, the pliers can be subject to ultrasonic cleaning and disinfection with appropriate liquids as well as autoclave sterilization. In addition, the pliers don't have the risk of chrome plate peeling off, which could potentially endanger the patient's health if it happens during use of the plier in the patient's mouth. It would also end the lifetime of the plier because if the chrome starts peeling off, the plier will corrode quickly.

Schweickhardt's insert brazing technique was especially developed for these pliers. The inserts are brazed to the plier with great care, which requires effort, but this effort pays off because the inserts always remain attached. No RMO® Schweickhardt plier ever loses its inserts during use, which is not always the case with other company's pliers. Having mastered the insert technique, three more requirements have to be fulfilled to produce a top quality plier.

The beaks and inserts are milled on high precision machines and additionally get final adjustment by expert craftsmen; because the best insert can only be as good as the exactness of its shape.

The joints are produced with great care to ensure a smooth and precise action over the whole working range. The precision of the joint determines the precision of the plier. If the joint is not tight enough, the plier will not function properly because the working ends will not close as precisely as they are supposed to. If the joint is too tight, opening and closing will cause difficulties which in turn makes exact work very difficult.

A box joint lock, the gold standard of joints in terms of long-term precision, is technically not possible for inserted pliers. But screw joints ensure a precise opening and closing procedure over a long time. The screw is fastened into the body with a special procedure so that it won't become loose even after years of usage.

All edges of the pliers are carefully chamfered to increase safety of patient and doctor (no pinching or cutting of gums).

- A safer grip of the wire (so the wire won't slip off) is due to a tungsten carbide coating; these are the only pliers having this coating. The non-inserted pliers are produced with the same great care on beak form, joints and edge chamfering as our inserted pliers.

SCHWEICKHARDT inserted pliers

More precise handling of wire.
High precision beaks guarantee perfect holding, bending and cutting results.

Longer lasting working ends through especially hard inserts.

Special manufacturing process brazes the inserts to the beaks. The results are very precise and reliable.

Better guidance of working ends.
Precision machine work on both joint and screw ensure a precise and smooth action over a long time.

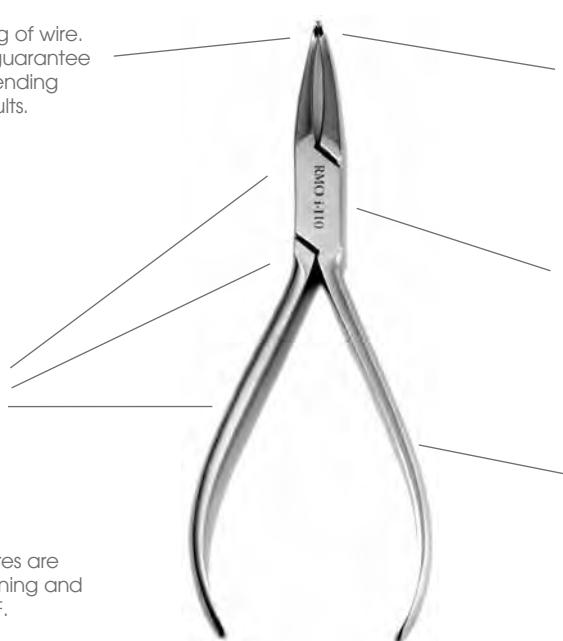

High corrosion resistance without chrome plating—zero risk of plating peeling off.

Higher safety and comfort through careful chamfering of all edges.

Easier instrument care:
All standard U.S. hygienic procedures are applicable, especially ultrasonic cleaning and hot air sterilization up to 390° F.

SCHWEICKHARDT non-inserted pliers

More precise handling of wire.
High precision beaks guarantee perfect holding, bending and cutting results.

Longer lasting working ends due to a special tungsten carbide coating.

Better guidance of working ends.
High precision box joint ensure a precise and smooth action over a long time.

Safety and comfort are assured by careful chamfering of all edges.

Easier instrument care:
All standard U.S. hygienic procedures are applicable, especially ultrasonic cleaning and hot air sterilization up to 390° F.

SCHWEICKHARDT UTILITY PLIERS

**How Plier Straight**

- Extra hard stainless steel
- Good all around utility plier has long slender lip-safe beaks
- Tips are serrated and hard carbide coated for additional grip
- Lip-safe edges at box and beaks
- Tips are precisely adjusted
- Box joint

i00110

1

**How Plier Curved**

- Same as i00110 only with curved beaks
- Curved beaks increase efficiency in posterior area
- Box joint

i00111

1

**Utility Plier (Weingart Style)**

- Stainless steel
- Tips are delicate and meet precisely so that even small attachments can be firmly held
- General purpose utility plier with curved beaks
- Inserted tempered tips for longer life
- Serrated and lip safe
- Tip width 8mm / Tip length 10mm
- Up to .020" (.508mm) wire

i00556

1

**Utility Plier (Weingart Style - Mini)**

- Stainless steel
- Tips are delicate and meet precisely so that even small attachments can be firmly held
- General purpose utility plier with curved beaks
- Tempered tips for longer life
- Serrated and lip safe
- Tip width 6mm

Loop Plier (Tweed)

- Extra hard stainless steel
- Tips precision milled
- Three step loop former .049" (1.25mm), .065" (1.65mm), .085" (2.15mm)
- Grooved and serrated opposing tip for very small loops
- For up to .022" x .028" (0.559mm x 0.711mm) wire
- Non-removable tip
- Box joint

i00350

1

**Loop Forming Plier (Optical Type)**

- Extra hard stainless steel
- Cone and concave beaks for round wires
- Concave beak is contoured to ensure more uniform loops
- Round beak is precision ground to .047" at tip
- For working round wires at tip up to .020" (0.508mm)

i00351

1

**Loop Plier (Tweed)**

- Includes one extra replacement tip
- Hard tool steel inserts
- Round beak is heat-treated. It has two sections of .047" (1.2mm), .059" (1.5mm)
- Concave beak prevents wire nicking and ensures more uniform loops; for making Omega loops
- Up to .020" (0.508mm) wire

SCHWEICKHARDT WIRE BENDING PLIERS

Light Wire Plier

- Longer, more gradually tapered beaks than the Bird Beak plier
- For working light round wires up to .020" (0.508mm)
- Longer beaks make it easier to bend small diameter loops
- Box joint

Order Number
Package Contains

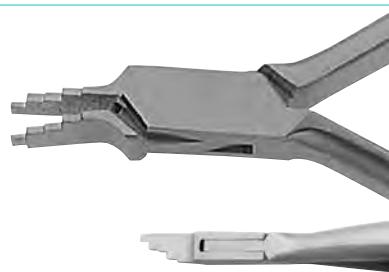

i00140 1

Lingual Arch Forming Plier

- Designed to form double back and triple back bends in either .030" (0.762mm) or .036" (0.914mm) wire for inserting in lingual sheaths
- Double back groove is close to the plier joint to assure adequate forming
- Recommended for use with 3D® FIXED/REMOVABLE™ (Wilson®) for palatal activation appliances

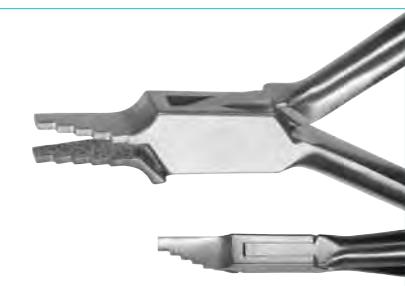

i00420 1

Closing Loop Plier (Nance)

- Extra hard stainless steel
- Four step loop forming beaks precision milled
- Radiused edges prevent wire damage
- Box joint
- Up to .028" (0.711mm) wire

i00001 1

Closing Loop Plier (Standard)

- Same use and same characteristics as the Nance i00001, but permits uniform vertical bendings
- Permits the simultaneous forming of two right angled bends
- Box joint
- Up to .028" (0.711mm) wire

i00101 1

NiT Crimping Plier

- Forms a smooth bend or crimp without nicking Nickel Titanium wire
- Used on .012 to .028 (.305mm to .711mm) wire

i00161 1

instruments

SCHWEICKHARDT WIRE BENDING PLIERS

Three Jaw Clasp Adjusting Plier (Aderer Type)

- Tips for rounded or dimensional wire up to .040" (1.016mm)
- Box joint
- Exact shape and position of beaks will avoid squeezing and marking of wire
- Made from extra hard stainless steel

Up to .040" (1.016mm) i00200 1

Up to .030" (0.762mm) i00201 1

Arch Forming Plier (Angle)

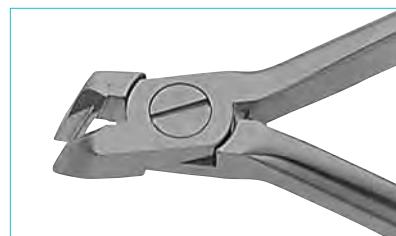

- For bending, holding or torquing dimensional wires
- Stainless steel with hard carbide coated tip surfaces
- Box joint
- Offering maximum resistance against wear by torquing
- Up to .021" x .028" (0.534mm x 0.711mm)

i00442 1

Warranty

SCHWEICKHARDT/RMO® instruments

SCHWEICKHARDT/RMO® instruments are 100% German-made by expert craftsmen using selected high-grade materials. These high-quality, precision instruments ensure routine orthodontic procedures are more efficient. An investment in quality Schweickhardt instruments will provide many years of reliable service.

Warranty

- All SCHWEICKHARDT/RMO instruments are fully guaranteed against corrosion and separation of inserts for five years from the purchase date.
- All SCHWEICKHARDT/RMO instruments are fully guaranteed for the life of the instrument to be free of defects in materials and workmanship.
- All SCHWEICKHARDT/RMO instruments, if misused, abused or failure to properly maintain or care for the instruments will void all warranty claims.

Return

- All RMO® instruments, which are unopened and in the original package, may be returned for full credit of the purchase price within 90 days of invoice.
- All RMO instruments, if defective, not misused, or tampered with in any manner, are returnable to RMO for repair, replacement or refund at RMO's option.

Repair

For SCHWEICKHARDT/RMO instruments outside the warranty, call RMO customer service or your sales representative for recommendation for repair.

RMO customer service number is 1-800-525-6375.

Recommendation for Care and Maintenance of Schweickhardt/RMO® Instruments

These instruments are designed to provide long and faithful service. To protect your investment and ensure reliable service, please follow these recommendations for maintenance and care.

New instruments should be brushed (using a non-metal brush) with soap and water, rinsed, dried and sterilized prior to first use.

Disinfecting and Cleaning

- Scrub, clean and disinfect immediately after being used to remove debris, cement, adhesives and blood, to avoid drying of contaminants on instruments.
- Chemical disinfection is the method of choice using an alkaline product (rust inhibitor). The solution must be prepared fresh daily, with the same concentration. Dip instrument into solution. Scrub the tips with a plastic brush. Do not soak the instrument for an extended period of time, and do not heat above room temperature.
- Ultrasonically clean 5-8 minutes. Use a high-quality, non-aggressive solution with rust inhibitors which have a neutral pH. Extended cleaning time with acidic chemicals will damage the instruments, especially chemicals designed to remove cements.

- Rinse the instruments with distilled or deionized water immediately after disinfecting and cleaning. Dry with a towel, forced warm air (portable 800 Watt hair dryer) or compressed air to avoid water staining.
- H₂O - Something as simple as water is one of the most important factors in the safe and effective cleaning and sterilization of your valuable instrument investment. Water in many municipal supplies can contain high levels of chlorine, chloramines, iron, and sulfur, plus other trace elements that can be damaging to your pliers. Tap water used to dilute cleaning solutions and for rinsing pliers prior to sterilization can cause severe damage. Chemicals in tap water can also neutralize rust inhibitors causing a corrosive effect on plier tips even when you are spending the time and money to use the right materials. We highly recommend that your office use distilled, R/O, or filtered water for mixing your cleaning solutions, combined with a no-rinse formula for cleaning solutions.
- If these steps are not followed, instruments may corrode or discolor during sterilization.

Sterilization

- Acceptable up to 185°C (395°F). Higher temperatures may cause discoloration of instrument.
- Do not heat sterilize instruments with plastic or rubber components, as it will tend to distort and discolor.
- Sterilize instruments in open position using the instructions for your unit.
- Make sure no moisture is sealed in the bag.

Dry Heat

- No chemical required.
- No corrosion problems when properly dried before process.

Because of the non-stainless characteristics of a vast majority of orthodontic plier tip materials, Rapid Dry Heat Sterilization, became the most widely used method of infection control in this dental specialty. Between rapid cycle turn-around and large load capacity, it was the logical choice for practitioners seeking to protect their substantial instrument investment. Even with advances in materials technology, Dry Heat remains as one of today's most sensible choices for safety and efficacy in the busy orthodontic practice.

- Clean in an ultrasonic unit for 10 minutes, with a no-rinse general purpose solution with an included rust inhibitor. Keep tips open during cleaning.
- Dry instruments with a compressed air blast, towel, or allow to drain for five minutes if using a no-rinse solution.
- Place pliers on rack or cassette and load sterilizer according to manufacturer's instructions. Loading method should allow plier tips to remain open during sterilize cycle.
- After sterilization cycle is complete, lubricate pliers with a silicon (non-petroleum) lubricant or RMO® Instrument Lubricant J00201. DO NOT use tap water during any sterilization process and always dry instruments whenever they are rinsed.

Chemiclave (chemical vapor)

- Has low heat and very low water vapor content as well as a short cycle time.
- A special chemical solution must be used in a properly ventilated area.

Chemclave - (Unsaturated Chemical Vapor)

- Clean in an ultrasonic unit for 10 minutes with a no-rinse general purpose solution with an included rust inhibitor. Keep tips open during cleaning.
- Dry instruments with a compressed air blast, towel, or allow to drain for five minutes if using a no-rinse solution.
- Load pliers on tray placing layers of paper towels between instruments. Loading method should allow plier tips to remain open during sterilize cycle.
- Sterilize according to manufacturer's instructions.
- After sterilization cycle is complete, depressurize equipment and allow pliers to cool.
- Remove instruments and make sure they are dry prior to storage.
- Lubricate pliers with a silicon lubricant or RMO® Instrument Lubricant J00201. DO NOT use tap water during any sterilization process and always dry instruments whenever they are rinsed.

Autoclave (steam under pressure)

- Good penetration
- Possibility of rust and corrosion if instruments remain wet after processing

Because of the high levels of moisture in the autoclave process, this method can be damaging to ferrous plier tips and is not generally recommended unless instruments are 100% stainless steel or tungsten carbide inserted.

- Clean in an ultrasonic unit for 10 minutes with a no-rinse general purpose solution with an included rust inhibitor. Keep tips open during cleaning.
- Dry or drain instruments and dip in instrument milk.
- Load pliers on tray. Loading method should allow plier tips to remain open during sterilize cycle.
- Sterilize according to manufacturer's instructions.
- After sterilization cycle is complete, depressurize equipment and allow pliers to cool.
- Remove instruments and make sure they are dry prior to storage.
- Lubricate pliers with a silicon lubricant or RMO® Instrument Lubricant J00201. DO NOT use tap water during any sterilization process and always dry instruments whenever they are rinsed.

Cold sterilization (Glutaraldehyde)

- Must remain in solution a minimum of 10 hours.
- Useful for sterilization of heat sensitive instruments with plastic or rubber.

CDC and ADA guidelines federally mandate the use of heat sterilization for instruments used in dental care. Many professional offices use cold sterilization/ high level disinfectants for holding solutions and processing of heat sensitive items. If your office uses these types of products, here are some recommendations for avoiding damage to your pliers:

- Always ultrasonically clean prior to immersion in high level disinfectants and cold sterile solutions using the same guidelines as specified in heat sterilization methods.
- If using glutaraldehyde solutions, use only those that are non-acidic in composition and include a rust inhibitor.
- Avoid contact with quarternary ammonium compounds and iodophors.
- Keep plier tips open in liquid. Avoid immersion overnight in these chemical solutions.
- If solutions require dilution, do not use tap water. Use distilled, RO, or filtered water free from errant chemicals.
- Dry instruments immediately after rinsing.
- Lubricate frequently with a silicon-based lubricant or RMO® Instrument Lubricant J00201.

Maintenance

- Corroded instruments should be discarded.
- Corrosion can be transferred during sterilization. Joints, inserts and ratchets have to be treated with paraffin or lubricant. RMO® Instrument Lubricant J00201.

Hints

- Apply a light coat of silicone spray or RMO® instrument Lubricant J00201 every week, or as needed depending on use.
- Do not dry-heat sterilize instruments with plastic handles.
- Ultrasonic cleaning may loosen inserts and dull sharp edges.
- All cutters should be resharpened every 6-9 months, or as necessary.
- Warranty does not cover routine maintenance, sharpening or reconditioning.

SCHWEICKHARDT INSTRUMENTS

instruments

APEX SERIES™ INSTRUMENTS

RMO®'s APEX Series™ Instruments

The high quality of RMO at an economical price

APEX Series™ instruments are manufactured using high-tech equipment and high-end processing to ensure our customers get the highest quality product at a very economical price. The APEX line of instruments is designed to last and maintain a high quality throughout their life.

APEX Series instruments use surgical grade 420 stainless steel forgings with high grade of tool steel inserts to provide you with one of the finest instrument lines.

Along with our standard high quality material, the Apex plier line delivers high quality pliers with the best corrosion resistance.

Apex Plier Line is today's answer to the decades old problem of delivering orthodontic instruments with adequate corrosion resistance.

The Apex Plier Line has a 420 series stainless steel box-jointed forgings. What makes the Apex Plier Line extraordinary is the highly corrosion-resistant steel inserts that not only withstand the rigors of cutting, bending and forming highly tensile orthodontic wires, but contain the highest level of chromium available in any tool steel.

Because of the chemical and basic elemental properties of this new compaction metal, combined with an advanced processing methodology, we have found a material with significant advantages over both tool steel and tungsten carbide. The Apex Plier Line is the solution to brittle, fractured carbide inserts, flaking chrome plating and all the other compromises previously necessary to make corrosion resistant instruments.

Tired of this?

Want this?

Apex - new technology metallurgy delivers inserted tip materials with extremely high chromium content.

How Plier - Straight

- 2.5mm tips
- Matching serrated pads assure a firm, positive grip
- Rounded tips for patient comfort and safety
- Box joint

Wire Range

.012" - .028" (0.305mm - 0.711mm) Round
.022" x .028" (0.559mm x 0.711mm) Rectangular

APEX SERIES™ WIRE BENDING PLIERS

**Bird Beak Plier**

- Versatile plier for orthodontic heavy wire bending
- Round and pyramid beaks are smooth to prevent wire scoring
- Can also be used to form springs
- Tip sizes are .035" round and square
- Box joint

.020" - .032" (0.508mm - 0.813mm) Round
.022" x .028" (0.559mm x 0.711mm) Rectangular

Order Number

Package Contains

T00138

1

**Light Wire Plier**

- Extra long, narrow beaks for precise bends
- Designed for working with small wires and forming wire springs
- Tapered beaks make it easy to bend small diameter loops
- Tip sizes are .030 round and square
- Box joint

.014" - .020" (0.356mm - 0.508mm) Round
.022" x .028" (0.559mm x 0.711mm) Rectangular

T00141

1

**Cinch Back Plier**

- This plier is made with the optimum angle for working behind the buccal tube
- Serrated tips are tapered to a fine point allowing access to hard-to-reach areas
- Box joint

.012" - .020" (0.305mm - 0.508mm) Round
.016" x .022" (0.406mm x 0.559mm) Rectangular

T00159

1

**3-Jaw Plier**

- Precision tips for accurate wire and clasp adjusting and contouring
- Also excellent for bending of orthopedic appliances
- Box joint

.014" - .030" (0.356mm - 0.762mm) Round
.022" x .028" (0.559mm x 0.711mm) Rectangular

T00201

1

**Wire Contouring Plier**

- Smooth, non-grooved surface with chamfered forming surfaces for stress-free bending
- Box joint

.016" - .036" (0.406mm - 0.914mm) Round
.022" x .028" (0.559mm x 0.711mm) Rectangular

T00204

APEX SERIES™ WIRE BENDING PLIERS

**Optical Plier**

- Concave/convex beaks bend round or rectangular wire
- Box joint

.012" - .032" (0.305mm - 0.813mm) Round
.022" x .028" (0.559mm x 0.711mm) Rectangular

T00351

1

**Stop/V-Bend Plier**

- Special design makes 1mm "V" bends to shorten arch wires or provide a positive stop
- Excellent for placing stops in nickel-titanium wires
- Box joint

.012"-.020" (0.305mm - 0.508mm) Round
.022" x .028" (0.559mm x 0.711mm) Rectangular

T00221

1

**Loop Forming and Closing Plier (Nance Style)**

- Precision loop forming with four-step tip (3, 4, 5 and 6mm)
- Serrated tips prevent wire slippage
- Box joint

.014" - .020" (0.356mm - 0.508mm) Round
.022" x .028" (0.559mm x 0.711mm) Rectangular

T00001

1

**Tweed Loop Forming Plier**

- Concave/convex beak makes precise Omega loops
- Tip has three forming sections: .045", .060" and .093"
- Box joint

.014" - .020" (0.356mm - 0.508mm) Round
.022" x .028" (0.559mm x 0.711mm) Rectangular

APEX SERIES™ WIRE BENDING PLIERS

**Lingual Arch Forming Plier**

- Plier makes consistent and repeatable bends
- Forms double-back and triple-back bends in .030" and .036" wire for use with lingual sheaths
- Jaws of the plier have four grooves placed and sized for all different sized larger wires
- Box joint

.020" - .036" (0.508mm - 0.914mm) Round
.022" x .028" (0.559mm x 0.711mm) Rectangular

Order Number

Package Contains

T00420

1

**Rectangular Arch Bending Plier (Tweed Style)**

- Ideal for forming square and rectangular arch wires
- Thin jaws are parallel at .020" opening
- Forms offsets and 90° bends on all types of arch wire
- Box joint

.022" x .028" (0.559mm x 0.711mm) Rectangular

T00442

1

**Crimpable Hook Plier**

- Angled beak of the plier allows for precise placement of the hooks on the arch wire
- One squeeze and the hook is secure

T00130

1

**Step Plier**

- Step plier is equipped with a double-sided offset beak for bayonet-style step bend
- Creates right hand or left hand step-up or step-downs
- Box joint

.014" - .020" (0.356mm - 0.508mm) Round
.022" x .028" (0.559mm x 0.711mm) Rectangular

.5mm
1mm

T00132

1

T00134

1

**NiT Crimping Plier**

- Forms a smooth bend or crimp without nicking Nickel Titanium wire

.022" - .028" (0.559mm - 0.711mm) Rectangular

T00160

APEX SERIES™ CUTTERS

**Pin and Ligature Cutter**

- Concave design front for maximum vision when cutting
- TRU-CHROME (S.S.) and Elgiloy wire only
- Box joint

.010" - .020" (0.254mm - 0.508mm) Soft Wires

T00552

1

**Mini Pin and Ligature Cutter**

- Fine tips to easily access hard-to-reach areas
- Cuts wire ligatures, pins and elastics
- TRU-CHROME (S.S.) and Elgiloy wire only
- Box joint

.010" - .014" (0.254mm - 0.356mm) Soft Wires

T00551

1

**Safety Hold Distal End Cutter**

- Safety hold is ideal for cutting wires within the patient's mouth
- Plier shear-cuts and holds arch wire within .5mm of the buccal tube
- Box joint

.012" - .022" (0.305mm - 0.559mm) Round
.022" x .028" (0.559mm x 0.711mm) Rectangular

T00550

1

**Standard Flush Cut and Hold Distal End Cutter**

- This unique design cuts wires flush with the buccal tube while holding fragments with a wire spring
- Box joint

.014" - .020" (0.356mm - 0.508mm) Round
.022" x .028" (0.559mm x 0.711mm) Rectangular

T00566

APEX SERIES™ BOND PLACEMENT TWEEZER/
BAND AND BRACKET REMOVERS

Direct Bond Bracket Holder

- Unique reverse action tweezer with finely serrated beaks for a non-slip grip
- Easy release of both metal and plastic direct bond brackets
- Fits narrow to wide twin

Small
Wide

T00102 1
T00101 1

Direct Bond Remover - Straight

- Wedges between the base and the tooth surface and lifts off with virtually no stress
- Precision diamond honed wedges work on all types of brackets
- Box joint

T00546 1

Direct Bond Remover - Angled

- Quickly and safely removes direct bond brackets
- Angled precision edges allow for easy removal of brackets and excess bonding material
- Box joint

T00545 1

Posterior Band Remover

- Wedges under the band while the 5mm replaceable teflon bumper rests on the occlusal surface for easy band removal
- Box joint

T00347 1
T00347T 5 each

Replacement Pads

i-TTR Utility Tweezer

- Stainless Steel
- Thin tapered tips are serrated for additional grip
- Excellent general use utility tweezer
- Recommended for use with the RMO® i-TTR Lingual Bracket System

T00700 1

Warranty APEX Series™/RMO® instruments

Guarantee

All RMO® APEX Series instruments offer an unconditional one year warranty for manufacture defects, with an additional lifetime guarantee for insert debonding.

Wear is a normal result of use and is not a defect in workmanship. RMO® will not replace or exchange cutters that have been in service for six months or longer.

All RMO® APEX Series instruments are fully guaranteed to be free of defects in materials and workmanship. If the instrument is misused, abused or not properly maintained and cleaned, the warranty claims will be void.

Return

All RMO® APEX Series instruments, which are unused, unopened and in the original package may be returned for full credit within 90 days of purchase invoice. If defective and not misused or tampered with in any manner, it may be returned to RMO® within 90 days for replacement of refund.

Repair

For repair to the APEX Series instruments outside the warranty, call RMO® Customer Service, your sales representative or your local distributor for repair recommendations. RMO® Customer Service number 1-800-525-6375.

Care and Maintenance

Lubrication – RMO® recommends lubrication of all instruments every week depending on use.

Introduction – RMO® has chosen a hi-tech material for its standard plier tip inserts which we believe provides the most superior properties for orthodontic applications. This ferrous material is extremely strong, resistant to abrasion, flexible without fracturing in thin cross sections and ultimately durable. These materials combined with our box-jointed stainless steel forgings give you excellent value for your instrument dollar, but require your participation in proper care to provide their maximum potential value to your practice.

H₂O - Something as simple as water is one of the most important factors in the safe and effective cleaning and sterilization of your valuable instrument investment.

Water in many municipal supplies can contain high levels of chlorine, chloramines, iron, and sulfur, plus other trace elements that can be damaging to your pliers. Tap water used to dilute cleaning solutions and for rinsing pliers prior to sterilization can cause severe damage. Chemicals in tap water can also neutralize rust inhibitors causing a corrosive effect on plier tips even when you are spending the time and money to use the right materials. We highly recommend that your office use distilled, R/O, or filtered water for mixing your cleaning solutions, combined with a no-rinse formula for cleaning solutions.

Choosing a Sterilization Method

RMO® STRONGLY RECOMMENDS DRY HEAT STERILIZATION FOR INSERTED ORTHODONTIC PLIERS AS THE OPTIMUM METHOD OF INFECTION CONTROL. Other methods of sterilization can be adapted to the non-stainless materials used in many inserted orthodontic pliers, but the following guidelines must be followed carefully.

Dry Heat Sterilization

Because of the non-stainless characteristics of a vast majority of orthodontic plier tip materials, Rapid Dry Heat Sterilization became the most widely used method of infection control in this dental specialty. Between rapid cycle turn-around and large load capacity, it was the logical choice for practitioners seeking to protect their substantial instrument investment. Even with advances in materials technology, Dry Heat remains as one of today's most sensible choices for safety and efficacy in the busy orthodontic practice.

- Clean in an ultrasonic unit for 10 minutes, with a no-rinse general purpose solution with an included rust inhibitor. Keep tips open during cleaning.
- Dry instruments with a compressed air blast, towel, or allow to drain for five minutes if using a no-rinse solution.
- Place pliers on rack or cassette and load sterilizer according to manufacturer's instructions. Loading method should allow plier tips to remain open during sterilize cycle.
- After sterilization cycle is complete, lubricate pliers with a silicon (non-petroleum) lubricant or RMO® Instrument Lubricant J00201. DO NOT use tap water during any sterilization process and always dry instruments whenever they are rinsed.

Chemclave - (Unsaturated Chemical Vapor)

- Clean in an ultrasonic unit for 10 minutes with a no-rinse general purpose solution with an included rust inhibitor. Keep tips open during cleaning.
- Dry instruments with a compressed air blast, towel, or allow to drain for five minutes if using a no-rinse solution.
- Load pliers on tray placing layers of paper towels between instruments. Loading method should allow plier tips to remain open during sterilize cycle.
- Sterilize according to manufacturer's instructions.
- After sterilization cycle is complete, depressurize equipment and allow pliers to cool.
- Remove instruments and make sure they are dry prior to storage.
- Lubricate pliers with a silicon lubricant or RMO® Instrument Lubricant J00201. DO NOT use tap water during any sterilization process and always dry instruments whenever they are rinsed.

instruments

Warranty APEX Series™/RMO® instruments

Autoclave

Because of the high levels of moisture in the autoclave process, this method can be damaging to ferrous plier tips and is not generally recommended unless instruments are 100% stainless steel or tungsten carbide inserted.

- Clean in an ultrasonic unit for 10 minutes with a no-rinse general purpose solution with an included rust inhibitor. Keep tips open during cleaning.
- Dry or drain instruments and dip in instrument milk.
- Load pliers on tray. Loading method should allow plier tips to remain open during sterilize cycle.
- Sterilize according to manufacturer's instructions.
- After sterilization cycle is complete, depressurize equipment and allow pliers to cool.
- Remove instruments and make sure they are dry prior to storage.
- Lubricate pliers with a silicon lubricant or RMO® Instrument Lubricant J00201. DO NOT use tap water during any sterilization process and always dry instruments whenever they are rinsed.

Cold Sterilization

CDC and ADA guidelines federally mandate the use of heat sterilization for instruments used in dental care. Many professional offices use cold sterilization/ high level disinfectants for holding solutions and processing of heat sensitive items. If

your office uses these types of products, here are some recommendations for avoiding damage to your pliers:

- Always ultrasonically clean prior to immersion in high level disinfectants and cold sterile solutions using the same guidelines as specified in heat sterilization methods.
- If using glutaraldehyde solutions, use only those that are non-acidic in composition and include a rust inhibitor.
- Avoid contact with quaternary ammonium compounds and iodophors.
- Keep plier tips open in liquid. Avoid immersion overnight in these chemical solutions.
- If solutions require dilution, do not use tap water. Use distilled, RO, or filtered water free from errant chemicals.
- Dry instruments immediately after rinsing.
- Lubricate frequently with a silicon-based lubricant or RMO® Instrument Lubricant J00201.

equipment

In any orthodontic practice high quality equipment is essential for the efficiency and superior results of the treatment being provided. RMO® has 2 important offerings, that combine advanced technology, functionality and long term reliability.

660 XP Multi Purpose Welder: This is a small, versatile, economical chairside unit created to fulfill the multi-purpose requirements of appliance fabrication. It occupies minimum counter space and its light weight makes it appropriate for chairside or mobile use. Electrodes align automatically and accessories add versatility to appliance fabrication. It carries the CE mark, which satisfies the most stringent technical and safety regulations.

FlashMax P3 "Introducing the FlashMax P3 Light Pen; the Most Powerful Curing Light in the World!" (The Dental Advisor – July 15, 2011)

This is a battery operated, cordless, hand unit that provides maximum office flexibility and convenience. One charge is good for up to 500 seconds (approximately 20 quadrants).
